

CONTENTS

Preface	xi
1 Hamilton's Principle and energy theorems	1
<i>1-1</i> The fundamental process of the calculus of variations	2
<i>1-2</i> Hamilton's Principle and the mechanics of continuous media	5
<i>1-3</i> Hamilton's Principle in electrodynamics	15
<i>1-4</i> Energy theorems	21
2 Fundamentals of plane wave theory: static fluids	32
<i>2-1</i> The equation for waves in stratified fluids	33
<i>2-2</i> The isothermal atmosphere: plane acoustic and gravity waves	40
<i>2-3</i> Phase and group velocities: dispersion	47
<i>2-4</i> Fluids with constant coefficients: dispersion of free waves	57
3 Waves in static stratified fluids: boundary effects and waveguides	69
<i>3-1</i> Boundary conditions: reflection and refraction at discontinuities	70
<i>3-2</i> Reflection and refraction by stratified and layered media	86

3-3	Waveguides: general principles	95
3-4	Approximation techniques and layered models	108
3-5	Boundary waves	125
4	Waves in fluids in steady motion	140
4-1	Equations of motion in flowing and rotating systems	141
4-2	Waves in rotating fluids	148
4-3	Stability waves in shear flows: homogeneous fluids	165
4-4	Waves in stratified shear flows	175
5	Elastic waves in solids	181
5-1	Equations of motion for solids: types of body waves	182
5-2	Boundary conditions, reflection, and refraction in solids	196
5-3	Boundary waves	206
5-4	Layered solids, waveguides, and planetary models	214
6	Electromagnetic and hydromagnetic radiation	232
6-1	Fundamental equations	234
6-2	Electromagnetic waves in dielectrics	241
6-3	Electromagnetic waves in plasmas	250
6-4	Hydromagnetic waves	260
7	Green's functions and point sources	267
7-1	The principle of superposition. Considerations of symmetry	268
7-2	Green's functions	275
7-3	Green's functions: asymptotic approximations	286
7-4	Orthogonal expansions. Green's functions for stratified media	294
7-5	The Laplace transform method	306
8	Modes and normal coordinates	315
8-1	Normal modes and coordinates in finite, discrete systems	317
8-2	Infinite media. Sources of radiation as generalized forces	323
8-3	Normal coordinates in electromagnetic theory	334
8-4	Normal coordinates and diffraction	339
9	Waves in real media	349
9-1	Scattering by volume and surface irregularities	350
9-2	Energy dissipation	364
9-3	Noise and filter theory	378
9-4	Propagation on a spherical planet	388

10	Some nonlinear effects	393
<i>10-1</i>	Second-order effects in surface-gravity-wave propagation	395
<i>10-2</i>	The streaming effect	402
<i>10-3</i>	The generation of sound by turbulence	409
	Appendices	415
	Solutions to Problems	445
	Index	459
