

CONTENTS

Recent Perspectives on Turbulence in the Free Atmosphere	1
J. A. Dutton	
1. Introduction	1
2. Definitions, Properties, and Implications of Turbulence	2
3. Equations of Motion for Turbulence and Large-Scale Flow	10
4. Recent Developments in Understanding CAT	18
5. Comments on the Original Text	22
Literature Cited	27
Chapter 1	
Some Aspects of the Theory of Atmospheric Turbulence	31
1. The Nature of Atmospheric Turbulence	31
2. The Structure and Energetics of a Turbulent Flow	35
3. Statistical Description of a Turbulent Velocity Field	38
4. The Energy Spectrum of Turbulence	42
5. Interaction of the Average and Turbulent Fields of Temperature and Wind Velocity	45
Chapter 2	
Methods for Experimental Investigations of Turbulence in the Free Atmosphere	49
1. Airborne Methods	49
2. The Radiosonde	76
3. Radar	78
Chapter 3	
Statistical Analysis of Measurements	81
1. Calculation of Spectra from Continuous Records of Finite Length	81
2. Calculation of Spectra from Discrete Records of Finite Length with Autocorrelation Functions	88
3. Calculation of Spectra from Discrete Records of Finite Length Using Mathematical Filters	97
4. Methods for Statistical Processing	103
Chapter 4	
The Spectral Structure of Atmospheric Turbulence	109
1. Spectral Characteristics of Turbulence at Low Altitudes	109

2. The Intermittent Nature of Turbulence and the Spectrum at the Outer Boundary of Turbulent Layers of the Atmosphere	117
3. The Spectrum of Turbulence in a Thermally Stratified Atmosphere.	120
4. Energy Transfer in the Spectrum and a Generalized Spectrum of Turbulence of the Free Atmosphere.	127
5. Peculiarities of Experimental Spectra of Clear Air Turbulence	133
6. Experimental Data on the Intensity of Turbulence at High Altitude	134
Chapter 5	
Atmospheric Convection and Thermal Turbulence	139
1. Disordered Atmospheric Convection	139
2. Cellular Convection	149
Chapter 6	
Waves and Atmospheric Turbulence	153
1. Gravity-Shear Waves	153
2. Stability Criteria for Internal Gravity-Shear Waves and the Connection between Turbulence and Disintegrating Waves	164
3. Mountain Waves	167
Chapter 7	
Turbulence Affecting the Flight of Aircraft	181
1. Estimating the Intensity of Turbulence Affecting the Flight of Aircraft	181
2. Turbulence in the Troposphere and the Lower Stratosphere	187
3. Turbulence in Jet Streams and near the Tropopause Zone	195
4. The Relation between Turbulence Causing Aircraft Buffeting and Thermal and Dynamic Conditions in the Atmosphere	202
Chapter 8	
Turbulence in Clouds	211
1. Layered Clouds	211
2. Cumuliform Clouds.	215
Chapter 9	
Mesostructure of the Wind Field	233
1. Mesoscale Variations of the Wind Field	233
2. Energy Spectra of Mesoscale Turbulence	235
3. Vertical Distribution of Wind Gusts and Their Spectra	238
4. The Mesometeorological Energy Minimum in the Spectrum of Turbulence	240
Literature Cited.	247
Index.	261
