Summary of Flow Visualization Methods	1
Steady flow and unsteady flow	1
Streamlines, path lines, streak lines and time lines	1
Classification of flow visualization methods	2
Summary of flow visualization methods	2
The Fundamentals of Fluid Flow	7
Stokes' flow	7
Flows around a circular cylinder	7
Karman vortex street	7
Couette flow	9
Two-dimensional Poiseuille flow	9
Flow in an inlet region and Poiseuille flow	10
Separation	10
Deformation and rotation	12
Hele-Shaw flow	12
Laminar and Turbulent Flows	16
Laminar boundary layer along a flat plate	16
Unsteady boundary layer around an impulsively starting cylinder	16
Laminar to turbulent transition: Tollmien-Schlichting (TS) waves	17
The turbulent spot	18
Laminar to turbulent transition triggered by a sphere	20
Transition from laminar to turbulent flows	20
Taylor vortices	21
Görtler vortices on a concave surface	22
Transition in a pipe flow	23
Flow on a rotating disk	24
The structure of a turbulent boundary layer	26
Laws of Similarity	28
Reynolds' law of similarity	28
Froude's law of similarity	28
	xv

Compressible Flow	32
Subsonic and supersonic flows	32
Interaction of shock waves and boundary layers in duct flow	33
Supersonic flow around a jet engine inlet	34
Hydraulic jump	35
Reflection of a plane shock wave from an inclined wall	36
Supersonic flow through a Laval nozzle	36
Transonic flow around an aerofoil	38
Transonic flow through a turbine cascade	40
Trailing shock wave and boundary layer separation in a transonic turbine cascade	41
Supercritical flow through a conical plug valve	43
Jets	45
Mixing layer between two flows	45
Collision of two opposed jets	45
Axisymmetric underexpanded jet	45
Coanda effect of a wall jet	45
Jet discharged into a confined, narrow channel	46
Miscellaneous Features of the Flow Past Solid Bodies: Wakes	49
Karman vortex streets behind circular cylinders	49
Wake behind a single circular cylinder	49
Wakes of two circular cylinders	49
Three-dimensional structure of the wake behind a circular cylinder of finite length	51
Flow around the surface of a circular cylinder (limiting stream lines)	53
Wake of a falling sphere	56
Wake of a flat plate	56
Wake of an aerofoil	59
Wake of a delta wing	59
Longitudinal vortices at the stern of a ship	59
Limiting streamlines on an axisymmetric ellipsoid	60
Limiting streamlines on three-dimensional bodies	60
Flow around a car model	62
Wake of a car body	63
Flow around skyscrapers	63
Flow around buildings arranged in an H shape	63
Pipe and Channel Flows	66
Flow at a pipe inlet	66
Inflow to a pipe inlet projecting into a vessel	66
Flow in a divergent pipe and near a pipe exit	66
Flow through a turning passage	66
Flow through a bend and elbow	70
Flow in sudden contraction and enlargement section	70
Flow through an orifice and a nozzle	71
Circulation	73
Circulation theory of lift	73
Circulation around an aerofoil section	73
Wings	76
Lift of an aerofoil	76

Types of stall characteristics of aerofoil sections	76
Functions of flaps	78
Sophisticated mechanical high lift devices	81
The development of shock waves with increasing Mach number	82
The development of shock waves with increasing angle of attack	85
Boundary layer flow around an aerofoil	86
Wing tip vortex	87
Flow around an aerofoil	87
Flow around a delta wing	87
Flow around an oscillating flat plate	90
Flow around an oscillating aerofoil	90
Oil-flow pattern on the suction surface of a sweptback wing	90
The effect of a fence located on the upper surface of a sweptback wing	93
Cascades and Fluid Dynamic Machinery	94
Adiabatic wall temperature distributions of a film cooled flat plate	94
Adiabatic wall temperature distributions of a film cooled gas turbine vane model	94
Flow in the passage between the vanes of a centrifugal pump impeller	94
Flow in the volute casing of a centrifugal pump impeller	96
Flow through a turbine cascade (changes from subsonic to supersonic state)	98
Flow through a turbine cascade (from normal operation to the stalled state)	102
Flow through an impulse turbine cascade (effect of blade profile)	102
Secondary flow in an annular, radial inflow, cascade	104
Flow separation on a vane surface of an annular cascade	106
Flow through an impeller	107
Unsteady Flow	108
Pulsating flow	108
Flow around a rotatory-oscillating cylinder	108
Laminar boundary layer flow on an oscillating flat plate	108
Sloshing of two-layered liquids within a rectangular container	108
Standing flow pattern induced by an oscillating cylinder	109
Standing flow pattern around an oscillating flat plate	110
Water waves	113
Cavitation	115
Cavitation in nozzle and orifice	115
Cavitation on the surface of an isolated hydrofoil	115
Cavitation behind a circular cylinder	118
Collapsing mechanism of a cavitation bubble	118
Cavitation in an axial flow pump	119
Cavitation in a mixed-flow pump	119
Cavitation damage on a Francis turbine runner	124
Cavitation in a Kaplan turbine	127
Cavitation on a ship propeller	127
Cavitation on a ship model propeller	127
Cavitation damage on a ship propeller	128
Behaviour of a Non-Newtonian Fluid	129
Weissenberg effect	129
Secondary flow in a viscoelastic fluid	129
Barus effect (Merrington effect)	129
Flow on the surface of a rotating disk	129
