

CONTENTS

Foreword <i>R. Vichnevetsky</i>	1
Sound waves in fluids <i>G. Birkhoff</i>	3
Current development in the numerical treatment of ocean acoustic propagation <i>W.F. Ames and D. Lee</i>	25
Aspects of supercritical wing theory <i>P.R. Garabedian</i>	49
Computational vortex dynamics in two and three dimensions <i>M.V. Melander, E.A. Overman, II and N.J. Zabusky</i>	59
Solving elliptic partial differential equations on the hypercube multiprocessor <i>T.F. Chan, Y. Saad and M.H. Schultz</i>	81
The Harvard open ocean model: Calibration and application to dynamical process, forecasting, and data assimilation studies <i>A.R. Robinson and L.J. Walstad</i>	89
Wave propagation and reflection in irregular grids for hyperbolic equations <i>R. Vichnevetsky</i>	133
Vortex separation and fine structure dynamics <i>K. Gustafson</i>	167
On the odd-even hopscotch scheme for the numerical integration of time-dependent partial differential equations <i>J.H.M. ten Thije Boonkkamp and J.G. Verwer</i>	183
Evaluation of wind effects on model buildings by the random vortex method <i>T.D. Bui and A.K. Oppenheim</i>	195
An algorithm for imposing the circulation constraint in a finite element code <i>N.G. Zamani and S.H. Woodside</i>	209
