

Table of Contents

<i>Guides for the Reader</i>	xiii
<i>Frontispiece</i>	xiv
1. PRELIMINARIES	
1. General Discussion of the Effects of Density or Entropy Variation	1
2. The Inertia Effect of Density or Entropy Variation	3
3. The Gravity Effect of Density or Entropy Variation	9
4. Creation of Vorticity by Nonhomogeneity	11
5. The Structure of Stratified Flows	13
2. WAVES OF SMALL AMPLITUDES	
1. Introduction	15
2. The Governing Differential Equations	16
3. Boundary Conditions	20
4. Three-Dimensional Waves	23
5. Effect of Compressibility in an Isothermal Atmosphere	26
6. The Eigenvalue Problem for the General Case	27
7. The Eigenvalue Problem for Wave Motion in an Incompressible Fluid	29
8. Dependence of Phase Velocity on Wavelength for System I	31
9. Wave Motion in a Bounded Isothermal Atmosphere	33

10. Wave Motion in an Isothermal Atmosphere with a Free Surface	39
11. Estimate of Phase Velocity	43
12. Wave Motion in a Stratified Liquid with Density Discontinuities	44
12.1 <i>The Reality of c^2</i>	45
12.2 <i>Equipartition of Energy</i>	46
12.3 <i>Existence of Eigenvalues</i>	48
12.4 <i>Surface of Density Discontinuity</i>	52
13. The Case of Infinite Depth	54
14. Approximate Calculation of Eigenvalues	57
14.1 <i>The Ritz Method</i>	58
14.2 <i>Eigenvalues for Interfacial Waves and for Slight Continuous Stratification in Each Layer</i>	62
14.3 <i>Eigenvalues for Superposed Layers with Nearly Exponential Stratification</i>	63
15. Waves Generated by a Plane Wave Maker	64
16. Atmospheric Waves in the Lee of Mountains	65
3. STEADY FLOWS OF FINITE AMPLITUDE	
1. Introduction	75
2. Governing Equation for Two-Dimensional Flows of an Incompressible and Inviscid Fluid	75
3. Types of Solutions for Steady Flows of an Incompressible Fluid of Variable Density	77
4. Class I: Pseudopotential Flows	78
5. Class II: Channel Flows and Large-Amplitude Lee Waves	81
6. Class II (<i>continued</i>): Two-Dimensional Stratified Flow into a Sink	82
7. Class II (<i>continued</i>): Stratified Flow over a Barrier	94
8. Class II (<i>concluded</i>): The Phenomenon of Blocking	107
9. Class III: Channel Flows and Large-Amplitude Lee Waves with Another Class of Upstream Conditions	109
10. Compressible Fluids with Variable Entropy	111
11. Homentropic and Homenergetic Flows over Great Heights	113
12. Flows with Slight Stratification in Entropy and Specific Energy	115
13. Axisymmetric Flows	116

TABLE OF CONTENTS	xi
14. Flows of Homogeneous Layers in a Gravitational Field	122
15. Internal Hydraulic Jumps	130
16. Internal Surges	134
17. Unidirectional Laminar Flows	137
18. Gravitational Convection from Sources	140
4. HYDRODYNAMIC STABILITY	
1. Introduction	141
2. Instability of Two Superposed Inviscid Fluids in a Tube	142
3. Effect of Viscosity on Gravitational Instability	145
4. Effects of Diffusivities on Gravitational Instability	152
5. Helmholtz Instability, or Instability of Two Superposed Inviscid Fluids	159
6. Wave Generation by Wind	163
7. Stability of Stratified Flows	168
7.1 <i>The Work of Taylor and Goldstein</i>	170
7.2 <i>General Results</i>	174
7.2.1 <i>Synge's Results</i>	175
7.2.2 <i>Miles' Results</i>	176
7.2.3 <i>Howard's Semicircle Theorem</i>	178
7.3 <i>The Drazin-Howard Theory</i>	179
8. Stability of Liquid Flow down an Inclined Plane	180
8.1 <i>Formulation</i>	181
8.2 <i>Solution for Long Waves</i>	186
8.3 <i>Solution for Small Reynolds Numbers</i>	189
8.4 <i>Stability of Very Short Waves</i>	192
9. The Dish-Pan Experiments	195
5. FLOWS IN POROUS MEDIA	
1. Introduction	196
1.1 <i>Darcy's Law Further Generalized</i>	197
2. Steady Two-Dimensional Flows with a Free Surface	199
2.1 <i>Hodograph Method</i>	199
2.2 <i>Free-Surface Flow into a Sink</i>	201
2.3 <i>Water Wedging</i>	204
2.4 <i>An Inverse Method for Two-Dimensional Free-Surface Flows</i>	209

3. Velocity of Fluid Masses in Porous Media	211
3.1 Velocity of a Fluid Mass in the Form of a Circular Cylinder	211
3.2 Velocity of a Cylindrical Mass of Elliptic Cross Section	213
3.3 Velocity of a Spherical Mass	216
3.4 Velocity of an Ellipsoidal Mass	217
4. Steady Flows of a Nonhomogeneous Fluid in Porous Media	219
4.1 Effect of Viscosity Variation	220
4.2 Equation Governing Two-Dimensional Flows in a Gravitational Field	221
4.3 Equation Governing Axisymmetric Flows in a Gravitational Field	222
4.4 Exact Solutions for Two-Dimensional Flows	222
5. Stratified Flows in Hele-Shaw Cells	227
6. Instability Due to a Difference in Viscosity	227
7. Maintained Gravitational Convection from a Line or Point Source	234
 6. ANALOGY BETWEEN GRAVITATION AND ACCELERATION	
1. Introduction	243
2. Equations of Motion for an Accelerating System	244
3. Equations of Motion for a Rotating System	245
4. Stiffening Effect of Vortex Lines	247
5. Centrifugal Waves	249
5.1 Rossby Waves	251
6. Hydraulic Jump in a Rotating Fluid	252
7. Large-Amplitude Steady Flows of a Swirling Fluid	257
8. Stability of Accelerating Fluids	263
9. Stability of Rotating Fluids	270
10. Finite Cavities Attached to Accelerating Bodies	273
 BIBLIOGRAPHY	277
