Part 1 Fundamentals

1 Introduction	3
<i>Wen-Jei Yang</i>	

2 Fluid Dynamics	7
<i>Tsuyoshi Asanuma and Yoshimichi Tanida</i>	
I Introduction	7
II Nature of Fluid	8
III Fundamentals of Fluid Motion	10
IV Boundary Layers	13
V Compressible Flows	17
VI Flows under Buoyancy Effects	22
VII Basic Items Related to Flow Visualization	24
References	28

3 Heat and Mass Transfer Fundamentals for Flow Visualization	29
---	----

<i>Wen-Jei Yang</i>	
I Introduction	29
II Transport Properties	29
III Transport-Rate Equations	29
IV Energy Balance Equation	31
V Conduction	31
VI Boundary Layers	32
VII Convection	33
VIII Radiation	35
IX Mass Transfer	37
References	38

Part 2 Methods

4 Liquids	41
<i>H. Werlé</i>	

5	Gases: Smokes	45
	<i>Thomas J. Mueller</i>	
	I Introduction	45
	II Equipment and Techniques	46
	III Examples of Smoke Visualization	53
	IV Concluding Remarks	62
	References	62
6	Electric Sparks and Electric Discharge	65
	<i>Y. Nakayama</i>	
	I Spark-Tracing Method	65
	II Spark-Line Straightening Method	66
	III Generation of Sparks	68
	IV Method of Simultaneously Visualizing Streamlines	71
	V Reliability	71
	VI Application Examples	74
	VII Electric-Discharge Method	81
	References	88
7	Surface Tracing Methods	91
	<i>R. Řezníček</i>	
	I Introduction	91
	II The Use of Surface Tracing Methods for Visualization of Liquid Flow	92
	III The Use of Surface-Tracing Methods for Visualization of Gas Flow	95
	References	101
8	Liquid Crystals	105
	<i>N. Kasagi, R.J. Moffat, and M. Hirata</i>	
	I Introduction	105
	II Physical and Chemical Properties	106
	III Fundamentals of Liquid Crystal Applications	108
	IV Applications	113
	V Digital Image Processing	117
	VI Conclusion	122
	References	122
9	Tufts	125
	<i>J.P. Crowder</i>	
	I Introduction	125
	II History	130
	III Fundamental Considerations	130
	IV Application Examples	160
	V Conclusions	174
	References	174
10	Streaming Birefringence	177
	<i>W. Merzkirch</i>	
11	Speckle Photography	181
	<i>W. Merzkirch</i>	
	I Speckle Velocimetry	181
	II Speckle Photography of Flows with Varying Fluid Density	184
	References	186

12	Shadowgraph and Schlieren	189
	<i>Michel Philbert, Jean Surget, and Claude Véret</i>	
	I Light Propagation in a Heterogeneous Medium	189
	II Optical Visualization Methods	189
	III Main Optical Arrangements used for Flow Visualization in Wind Tunnels	197
	IV Use of Optical Methods in Fluid Mechanics	199
	References	201
13	Interferometry	203
	<i>Michel Philbert, Jean Surget, and Claude Véret</i>	
	I Introduction	203
	II Description of Interferometers	203
	III Implementation of Interferometry in Wind Tunnels	208
	IV Interferogram Data Processing	209
	References	210
14	Light Sheet Technique	211
	<i>Michel Philbert, Jean Surget, and Claude Véret</i>	
	I Introduction	211
	II Description	211
	III Applications to Flow Visualization	213
	References	216
15	Planar Fluorescence Imaging in Gases	219
	<i>Ronald K. Hanson and Jerry M. Seitzman</i>	
	I Introduction	219
	II Laser-Induced Fluorescence	220
	III Trends in Planar Imaging of Gases	228
	References	230
Part 3 Image Processing and Computer-Assisted Methods		
16	Digital Processing of Interferograms	235
	<i>Giovanni Maria Carlomagno and Armando Rapillo</i>	
	I Introduction	235
	II Image Acquisition	237
	III Interferogram Evaluation	243
	IV Applications	250
	References	259
17	Optical Image Processing	261
	<i>Lambertus Hesselink</i>	
	I Introduction	261
	II Concepts of Modern Optics	262
	III Examples of Fraunhofer Diffraction	267
	IV Modern Interpretations of Classical Instruments and Optical Processors	269
	V Principles of Speckle Velocimetry	272
	References	277
18	Ultrasonic Image Processing	279
	<i>Michiyoshi Kuwahara, Shigeru Eiho, and Kunihiro Chihara</i>	
	I Introduction	279
	II Automatic Analysis of M-Mode Echocardiograms	279
	III Automatic Analysis of 2-D Echocardiograms	280

IV	A Microcomputerized Image Processor for 2-D Echocardiography	286
V	An Intracardiac Blood-Flow Image	287
	References	290
19	Cardiac Image Processing	291
	<i>Shigeru Eiho and Michiyoshi Kuwahara</i>	
I	Introduction	291
II	Image Processing of Cineangiograms	291
III	Three-Dimensional Reconstruction of the Left Ventricle	297
	References	305
20	Optical Tomography	307
	<i>Lambertus Hesselink</i>	
I	Introduction	307
II	Algebraic Reconstruction Technique	309
III	Fourier Transform Approach	310
IV	Back Projection	311
V	Filtered Back Projection	311
VI	Implementation	312
VII	Evaluation of Optical Tomography in Flow Applications	325
	References	327
21	Thermography	331
	<i>R. Monti</i>	
I	Introduction	331
II	Basic Principles of Noninvasive Surface Temperature Measurement Systems	333
III	Types of Thermographs	333
IV	Modern Systems and Trends	334
V	Surface Temperature Measurement	338
VI	Flow Visualization	341
VII	Other Applications	350
	References	352
22	Flow Solutions	355
	<i>Robert E. Smith and Robert A. Kudlinski</i>	
I	Introduction	355
II	Computational Fluid Dynamics and Grids	355
III	Computer-Generated Imagery and Flow-Field Visualization	356
IV	Scalar Variable Presentation	357
V	Workstation-Interactive Flow Visualization	359
VI	Hard-Copy Devices	361
VII	Conclusions	361
	References	361
23	Flow-Field Survey Data	363
	<i>Allen E. Winklemann</i>	
I	Introduction	363
II	Description of Technique	364
III	Typical Applications	368
	References	373
24	Computer-Aided Flow Visualization	375
	<i>C.R. Smith</i>	
I	Introduction	375
II	Image Enhancement	376

III	Image Reconstruction	383
IV	Image Synthesis	387
	References	390
Part 4 Applications		
25	Aerospace and Wind Tunnel Testing	395
	<i>G.S. Settles</i>	
I	Introduction	395
II	Wind Tunnel Testing	396
III	Other Aerospace Testing	402
	References	404
26	Water Tunnel Testing	409
	<i>H. Werlé</i>	
I	Types of Water Tunnel Setups	409
II	Examples of Applications	409
	References	413
27	Internal Flows	415
	<i>K.C. Cheng</i>	
I	Introduction	415
II	Historical Perspective	415
III	Flow Phenomena in Internal Flows and Flow Visualization Techniques	421
IV	Examples of Applications	432
V	Concluding Remarks	447
	References	450
28	Vortices	459
	<i>Peter Freymuth</i>	
I	Introduction	459
II	Conceptual Roots of Vortex Structures	459
III	Vortex Interactions	462
IV	Tapestries of Vortex Patterns	478
V	Three-Dimensional Vortices	478
VI	Conclusion	478
	References	478
29	Explosive Flows: Shock Tubes and Blast Waves	481
	<i>John M. Dewey</i>	
I	Introduction	481
II	Shock Tubes	481
III	Blast Waves	487
IV	Cameras and Light Sources	491
V	Analysis	493
VI	Future Developments	494
	References	495
30	Interferometry in Heat and Mass Transfer on Earth and in Space	499
	<i>J. Koster and R. Owen</i>	
I	Background	499
II	Conventional Earth-Based Applications	501
III	Low-Gravity Research Applications	506
	References	509

31	Double-Diffusive Convection	513
	<i>Josef Tanny and A.B. Tsinober</i>	
	I Introduction	513
	II Optical Methods	514
	III Marker Methods	520
	IV Particle Methods	526
	V Summary	528
	References	528
32	Infrared Thermography in Heat Transfer	531
	<i>Giovanni Maria Carlomagno and Luigi de Luca</i>	
	I Basic Principles of Infrared Thermography	531
	II The IR Imaging System	533
	III The Use of IRSR to Measure Convective Heat Fluxes	535
	IV Frequency Response of One-Dimensional Heat-Flux Sensors	535
	V Application of IRSR to Quasisteady Techniques	537
	VI Application of IRSR to Transient Techniques	538
	VII Measuring Heat Transfer in Wind Tunnel Facilities	539
	VIII Heat Transfer from a Plate to Impinging Jets	546
	Nomenclature	551
	References	552
33	Gas Turbine Disk Cooling Flows	555
	<i>J.R. Pincombe</i>	
	I Introduction	555
	II Experimental Apparatus	557
	III The Flow Around an Air-Cooled Turbine Disk	559
	IV The Flow Around Air-Cooled Co-Rotating Compressor Disks	562
	V The Flow Around Air-Cooled, Co-Rotating Turbine Disks	566
	VI The Flow in a Rotating Tube	569
	References	575
34	Coronary Arteries	577
	<i>Hani N. Sabbah, Fareed Khaja, James F. Brymer, Thomas M. McFarland, and Paul D. Stein</i>	
	I Introduction	577
	II Method of Visualization	577
	III Studies of the Right Coronary Artery	577
	IV Studies of the Left Anterior Descending Coronary Artery	578
	V Evidence of Flow Separation in the Left and Right Coronary Arteries	578
	VI Construction of the Coronary Mold	581
	VII Flow in the Sinuses of Valsalva	581
	VIII Flow Patterns in the Coronary Arteries	582
	References	586
35	Cardiovascular Systems	589
	<i>Ajit P. Yoganathan, H.-W. Sung, F.F. Philpot, Y.-R. Woo, S.T. McMillan, A. Jimoh, and A.J. Ridgway</i>	
	I Introduction	589
	II Apparatus and Methodology	589
	III Results and Discussion	594
	References	602

36	Medicine and Biology	603
	<i>Wen-Jei Yang</i>	
	I Introduction	603
	II Conventional Flow Visualization Techniques	604
	III Computer-Assisted Flow Visualization Techniques	609
	References	617
37	Indoor Environments	619
	<i>G.S. Settles</i>	
	I Introduction	619
	II Model Testing and Scaling	619
	III Room Ventilation	620
	IV Solar Heating	620
	V Industrial Ventilation	621
	VI Clean-Room Technology	622
	VII Large-Field Optical Visualization	622
	References	623
38	Agriculture	627
	<i>Junta Doi</i>	
	I Introduction	627
	II Boundary Layer around Plant Leaves	627
	III Flow around a Fish	629
	IV Agricultural Meteorology	630
	V Windbreaks	631
	VI Flow outside Agricultural Buildings	631
	VII Flow inside Agricultural Buildings	632
	VIII Sprayers and Sprinklers	633
	IX Food Technology	633
	X Soil and Water	635
	XI Soil and Grain	634
	XII Concluding Remarks	635
	References	635
39	Building Aerodynamics	637
	<i>W. Frank</i>	
	I Introduction	637
	II Experimental Arrangements	637
	III Results	638
	References	642
40	Land Vehicles	643
	<i>A. Cogotti</i>	
	I The Main Characteristics of Flow-Visualization Techniques for Land Vehicles	643
	II Types of Land Vehicles Tested in Wind Tunnels	644
	III Examples of the Main Techniques Used on Land Vehicles	644
	IV Conclusion	658
