

CONTENTS

	Page
Foreword	5
CHAPTER ONE ELEMENTS OF GAS DYNAMICS	
1. Elementary Shock Wave Theory	7
2. Weak Shock Waves	18
3. Shock Waves in an Ideal Gas	28
4. The Plane One-Dimensional Problem	33
5. Characteristics	40
6. The Case $k=3$	49
7. The Centrally Symmetric Problem	56
CHAPTER TWO THE DETONATION REGIME AND LOSSLESS COMBUSTION	
8. Detonation Waves	68
9. The Flow of Chemical Reaction in the Detonation Wave	85
10. Possible Conditions for the Propagation of Chemical Reaction	96
11. Combustion with an Induced Ignition Velocity	109
12. Stationary Combustion in a Stream	120
CHAPTER THREE THEORY OF DETONATION WITH LOSSES AND THE LIMITS OF DETONATION	
13. The Effect of Losses on the Propagation of a Deto- nation in a Pipe	133
14. Quantitative Calculation of the Effect of Losses on the Propagation of a Detonation in a Pipe	145
15. The General Problem of Detonation Taking Losses into Account. Thermal and Mechanical Losses	162

	Page
16. Spin Detonation	170
17. Detonation in Roughened Pipes	185
18. The Transmission of Normal Combustion in a Detonation	191
CHAPTER FOUR	
THE DETONATION OF CONDENSED EXPLOSIVES	
19. General Nature of the Detonation of Condensed Explosive Materials	206
20. A Refined Analysis of the Equation of State of the Explosion Products	228
CHAPTER FIVE	
MOTION OF THE DETONATION PRODUCTS	
21. Some Plane One-Dimensional Problems on the Motion of Detonation Products	247
22. Stationary Two-Dimensional Problems on the Scattering of Detonation Products	268
23. A Diverging Spherical Detonation Wave	279
