
Contents

§ 1. Introduction	1
1.1. A Survey of the Present State of Field Theory	1
1.2. Plan of Presentation	7
1.3. Some Notation	8
CHAPTER I Classical Theory of Free Fields	
§ 2. Lagrangian Formalism and Field Invariants	10
2.1. Fields and Particles	10
2.2. Hamiltonian and Lagrangian Formalisms	11
2.3. The Lagrangian Function and the Principle of Stationary Action	12
2.4. Transformation Properties of the Field Functions. Tensors and Spinors	15
2.5. Noether's Theorem	19
2.6. The Energy-Momentum Vector	23
2.7. The Angular Momentum Tensor and the Spin Tensor	24
2.8. The Charge and the Current Vector	26
§ 3. The Scalar Field	28
3.1. Lagrangian Formalism for a Real Scalar Field	28
3.2. Momentum Representation and Positive- and Negative-Frequency Components	30
3.3. The Discrete Momentum Representation	34
3.4. The Complex Scalar Field	35
§ 4. The Vector Field	38
4.1. Lagrangian, Subsidiary Condition, and Invariants	38
4.2. Transition to the Momentum Representation	43
4.3. Spin of the Vector Field	46
4.4. Klein-Gordon Equations Written in the Form of a System of First-Order Equations	47
§ 5. The Electromagnetic Field	49
5.1. Potential of the Electromagnetic Field	49
5.2. Gauge Transformation of the Second Kind and the Lorentz Condition	51
5.3. Lagrangian Formalism	53
5.4. Transverse, Longitudinal, and Time Components	55
5.5. Spin	57
§ 6. The Spinor Field. Dirac Matrices and Transformation Laws of Spinor Functions	58

6.1. Linearization of the Klein-Gordon Operator	58
6.2. Dirac Matrices	60
6.3. The Dirac Equation	64
6.4. Transformation Properties of the Spinor Field. . .	66
§ 7. The Spinor Field. Properties of the Solutions and Dynamic Variables	72
7.1. Momentum Representation and Matrix Structure .	72
7.2. Decomposition into Spin States and Normalization and Orthogonality Relations.	76
7.3. Lagrangian Formalism and Invariants	79
§ 8. Lagrangian of a System of Fields	83
8.1. The Interaction Lagrangian and Invariants of a System of Fields	84
8.2. Invariants under Gauge Transformations	85
 CHAPTER II Quantum Theory of Free Fields	
§ 9. General Principles of Quantization of Wave Fields	90
9.1. Operator Nature of the Field Functions and the Transformation Law of the State Amplitude.	90
9.2. Quantization Postulate for Wave Fields	92
9.3. The Physical Meaning of the Positive- and Negative-Frequency Components and of Adjoint Functions .	96
9.4. The Vacuum State and the Amplitude of the State with a Given Number of Particles	98
§ 10. Setting Up the Commutation Relations.	101
10.1. Types of Commutation Relations.	101
10.2. Normal Product of Operators and the Form of Dynamic Variables	103
10.3. Requirement that Energy Should Be Positive. . .	105
10.4. Fermi-Dirac and Bose-Einstein Commutation Relations	107
10.5. Commutation Relations and the Discrete Momentum Representation	109
§ 11. Scalar and Vector Fields	112
11.1. The Real Scalar Field	112
11.2. The Complex Scalar Field.	115
11.3. The Complex Vector Field	116
§ 12. The Spinor Field.	120
12.1. Fermi-Dirac Quantization and Commutation Functions	120
12.2. Dynamic Variables	122
12.3. Charge Conjugation.	124
§ 13. The Electromagnetic Field	128
13.1. Singularities of the Electromagnetic Field and the Quantization Procedure	128
13.2. Indefinite Metric	130
13.3. The Form of the Basic Quantities	136

§ 14. Green's Functions	136
14.1. Definition	136
14.2. "Retarded" and "Advanced" Green's Functions for a Scalar Field	138
14.3. Causal Green's Function for a Scalar Field	141
14.4. Causal Green's Functions for Various Fields	143
14.5. Relation to the Notations of Stueckelberg and of Schwinger	146
§ 15. Singularities of the Commutation and Causal Functions	147
15.1. Calculation of the $D^{(+)}$ and $D^{(-)}$ Functions	147
15.2. Explicit Form and Singularities of the Functions $D(x)$ and $D^c(x)$	151
15.3. Regularization of Singular Functions by the Method of Pauli-Villars	153
§ 16. Operator Expressions and Singular Functions	157
16.1. The Coefficient Functions of Operator Expressions	157
16.2. Wick's Theorem for Normal Products	159
16.3. Improper Nature of Singular Functions.	168
16.4. Some Properties of the Pauli-Villars Regularization	175
16.5. Multiplication of Singular Functions	177
16.6. Some Properties of Singular Functions	184
16.7. Multiplication of Operator Functions	185
16.8. Some Definitions	190
 CHAPTER III The Scattering Matrix	
§ 17. Fundamental Ideas of the Theory of Interacting Fields	192
17.1. Representations of the Schrödinger Equation	192
17.2. The Interaction Representation	194
17.3. The Scattering Matrix	197
17.4. Relativistic Covariance and Unitary Nature of the S-Matrix.	199
17.5. The Condition of Causality	200
17.6. "Classical Fields" as Arguments of Functionals	204
§ 18. The Interaction Lagrangian and the S-Matrix.	206
18.1. Expansion of the S-Matrix into a Power Series in Powers of the Interaction	206
18.2. Conditions of Covariance, Unitarity, and Causality for S_n	208
18.3. Determination of the Explicit Form of $S_1(x)$ and $S_2(x, y)$	211
18.4. Chronological Product of Local Operators.	215
18.5. Determination of the Functions S_n for Arbitrary n	217
18.6. Analysis of the Arbitrariness of the Functions S_n and the Most General Form of $S(g)$	220
§ 19. Evaluation of Chronological Products	227
19.1. Chronological Pairing	227
19.2. Wick's Theorem for Chronological Products.	233

§ 20. Reduction of the S-Matrix to the Normal Form	235
20.1. Structure of the Coefficients of the Scattering Matrix	235
20.2. Feynman Diagrams and the Rules of Correspondence	239
20.3. Examples	245
20.4. Concluding Remarks	247
§ 21. Feynman's Rules for the Evaluation of Matrix Elements of the Scattering Matrix.	249
21.1. Transition to the Momentum Representation	249
21.2. Evaluation of the Matrix Elements	252
21.3. Taking Account of Symmetry Properties	257
21.4. Scattering by External Fields	260
21.5. General Structure of the Matrix Elements	263
§ 22. Probabilities of Scattering Processes and Effective Cross Sec- tions	267
22.1. Normalization of the State Amplitude	267
22.2. Calculation of Transition Probabilities	270
22.3. Differential and Total Effective Cross Sections	273
§ 23. Examples of Calculation of Second-Order Processes	275
23.1. Compton Scattering.	275
23.2. Annihilation of an Electron-Positron Pair.	279
23.3. Bremsstrahlung.	282
 CHAPTER IV Removal of Divergences from the S-Matrix	
§ 24. On the Divergences of the S-Matrix in Electrodynamics (Second Order).	285
24.1. Divergent Diagram with Two External Electron Lines Σ	286
24.2. Segregation of the Divergent Part of Σ	291
24.3. Divergent Diagram with Two External Photon Lines Π	293
24.4. Segregation of the Divergences from Π and Gauge Invariance	296
24.5. Construction of an Integrable S_2	298
§ 25. On the Divergences of the S-Matrix in Electrodynamics (Third Order).	301
25.1. Vertex Diagram of the Third Order	302
25.2. Segregation of the Divergence from Γ and Gauge In- variance	304
25.3. Ward's Identity	309
25.4. Construction of an Integrable Function S_3	311
§ 26. General Rules for the Removal of Divergences from the S- Matrix	314
26.1. Formulation of the Problem.	314
26.2. Graphical Representation of the Subtraction Proce- dure and the Operation $\Delta(G)$	316
26.3. Index of the Diagram $\omega(G)$ and the Degree of Di- vergence.	319

26.4. Structure of the Exponential Quadratic Form . . .	323
26.5. Choice of the Operation $\Delta(G)$	328
26.6. Transition to the Limit $\varepsilon \rightarrow 0$	331
26.7. Generalization of the Prescription for the Construction of $\Delta(G)$	334
§ 27. Analytic Properties of the Coefficient Functions in the Momen- tum Representation.	336
27.1. Analytic Properties of S_n	336
27.2. Structure of the Functions H_n	337
27.3. Analytic Properties of the Functions H_n	338
§ 28. Classification of the Renormalizability of Different Theories	340
28.1. Interactions of the First and Second Kinds.	340
28.2. List of Interactions of the First Kind	344
28.3. Nonlocal Nature of Interactions of the Second Kind	347
28.4. Specification of a Theory of the First Kind by a Finite Number of Constants	349
 CHAPTER V Application of the General Theory of the Removal of Divergences to Special Cases	
§ 29. Scalar Field with Nonlinear Interaction	352
29.1. The Hurst-Thirring Field	352
29.2. Finiteness of the Number of Divergent Diagrams .	353
§ 30. Spinor Electrodynamics. I. General Form of Counter Terms	355
30.1. Types of Divergent Diagrams and Furry's Theorem	355
30.2. Gauge Invariance of the Scattering Matrix	361
30.3. Counter Terms	376
§ 31. Spinor Electrodynamics. II. Mass and Charge Renormalization	378
31.1. Gauge Transformation of the Pairing $\overline{A}A$	378
31.2. Nonuniqueness of the Process of Removal of Infinities	380
31.3. The Complete Green's Functions G, D , and the Vertex Part Γ	386
31.4. The Formal Nature of Infinite Renormalizations .	392
31.5. Radiation Corrections to External Lines and the Choice of Finite Constants	395
§ 32. Spinor Electrodynamics. III. Radiation Corrections of the Second Order	399
32.1. Correction to the Photon Function.	399
32.2. Corrections to the Electron Green's Function	402
32.3. Corrections to the Vertex Part	405
32.4. Outline of the Calculation of Corrections to the Klein- Nishina Formula	406
§ 33. Pseudoscalar Meson Theory	409
33.1. Isotopic Spin Formalism	409
33.2. Types of Divergent Diagrams and Counter Terms .	411
33.3. Second Charge, Multiplicative Renormalizations, and External Lines	413

§ 34. Schwinger's Equations for Green's Functions	416
34.1. Relation of the Complete Green's Functions to the Vacuum Expectation Values of T -Products	416
34.2. Generalized Wick's Theorem	421
34.3. Schwinger's Equations	424
34.4. Taking Counter Terms into Account	431

CHAPTER VI Schrödinger Equation and Dynamic Variables

§ 35. Schrödinger Equation for the State Amplitude	433
35.1. Equation for $\Phi(g)$ in Terms of Variational Derivatives	433
35.2. Schrödinger Equation in the Interaction Representa- tion and the Tomonaga-Schwinger Equation	435
35.3. Singularities of the Generalized Hamiltonian	440
35.4. Fundamental Properties of the Generalized Hamil- tonian	444
§ 36. Dynamic Variables of a System of Interacting Fields	445
36.1. Energy, Momentum, and the Angular-Momentum Tensor	446
36.2. Local Dynamic Quantities	450
36.3. The Current Vector	454
36.4. The Lorentz Condition	457
36.5. Wave Field Operators	458
§ 37. Vacuum Polarization and the Anomalous Magnetic Moment of the Electron	459
37.1. Vacuum Polarization	459
37.2. Anomalous Magnetic Moment of the Electron	465
§ 38. Dirac Equation with Radiation Corrections	471
38.1. Generalization of the Electron Wave Function	471
38.2. Generalization of the Dirac Equation	475
38.3. Lamb Shift	479
38.4. Concluding Remarks	482

CHAPTER VII The Method of Functional Averaging

§ 39. Representation of Green's Functions in Terms of Continuous Integrals	484
39.1. Introduction	484
39.2. Evaluation of $\langle T \exp i \int v\varphi d\rho \rangle_0$	486
39.3. Continuous Integrals	489
39.4. Closed Expressions for Green's Functions	492
§ 40. Gauge Transformations of the Electron Green's Function in Spinor Electrodynamics	496
40.1. Transition to the Transverse Gauge and Transforma- tion of the Function $G(x, y A)$	496
40.2. The Functional Integral for $G(x, y)$ in the Case of Transverse Gauge	499
40.3. Gauge Transformation of the Function $G(x, y)$	501

§ 41. Investigation of the Bloch-Nordsieck Model	503
41.1. The Bloch-Nordsieck Model and the Determination of $G(x, y A)$	503
41.2. Evaluation of $G(x, y)$	507

CHAPTER VIII The Renormalization Group

§ 42. The Group of Multiplicative Renormalizations in Spinor Electrodynamics	511
42.1. Introduction	511
42.2. The Group Property of Multiplicative Renormaliza- tions	512
42.3. Functional Equations of the Group	514
42.4. The Lie Differential Equations.	518
42.5. The Vertex Part	520
§ 43. Asymptotic Properties of the Electrodynamical Green's Func- tions	522
43.1. Formulation of the Problem.	522
43.2. Asymptotic Behavior in the Ultraviolet	524
43.3. Asymptotic Behavior in the Infrared.	529
§ 44. The Renormalization Group in Electrodynamics for $d_i \neq 0$.	531
44.1. Generalization of the Group Equations	531
44.2. Determination of the Asymptotic Behavior in the Ultraviolet and in the Infrared	534
44.3. Asymptotic Behavior of the Vertex Part	536
44.4. Various Possibilities.	544
§ 45. The Renormalization Group in the Two-Charge Pseudoscalar Meson Theory	545
45.1. The Second Charge in Meson Theory.	545
45.2. Transition to Functional Equations of the Group .	546
45.3. Asymptotic Behavior in the Ultraviolet.	550

CHAPTER IX Dispersion Relations

§ 46. General Remarks on the Method	553
46.1. Introduction	553
46.2. The Mathematical and Physical Bases for the Dis- persion Relations	554
46.3. A Review of the Work on the Dispersion Relations	558
46.4. The Problem of the Foundations of the Dispersion Relations	563
§ 47. Fundamental Properties of the S-Matrix in Local Field Theory	565
47.1. Introductory Remarks	565
47.2. General Properties	569
47.3. Local Properties	571
§ 48. Spectral Representation of the Pion Green's Function . . .	575
48.1. Radiation Operators of the First and Second Order and Their Vacuum Expectation Values	576
48.2. Vacuum Expectation Value of $\delta^2 S / \delta \varphi_\sigma(x) \delta \varphi_\rho(y)$. .	578

48.3. Vacuum Expectation Value of the Product of Two Currents	579
48.4. Analytic Properties of Q^r and Q^a	582
48.5. Spectral Representation for q^r , q^a , and q^c	586
§ 49. Spectral Representation of the Fermion Green's Function	590
49.1. Spectral Representation of the Vacuum Expectation Value of $\delta^2 S / \delta \psi \delta \bar{\psi}$	590
49.2. Proximity to a Contradiction	596
§ 50. Amplitude for Meson-Nucleon Scattering	597
50.1. Connection Between the Scattering Amplitude and the "Retarded" and "Advanced" Matrix Elements	597
50.2. Transition to a Fixed Frame of Reference. The Difficulties of Analytic Continuation	602
50.3. Outline of the Method of Obtaining Dispersion Relations for Forward Scattering.	604
§ 51. Problems of Analytic Continuation of the Scattering Amplitude for $\mathbf{p} \neq 0$	610
51.5. Analytic Properties in the Fictitious Region $\tau < -\mathbf{p}^2$	610
51.2. Structure of the Single Nucleon Term	614
51.3. An Auxiliary Theorem	617
51.4. Special Representation of the Function ST	625
51.5. Analytic Continuation Towards $\tau = \mu^2$	627
§ 52. Dispersion Relations for the Scattering of Pions by Nucleons	633
52.1. Transition to Real Quantities	633
52.2. Taking into Account the Symmetry Properties with Respect to E	636
52.3. Isotopic Spin and Spin Structure	638
52.4. The Nonobservable Region and the Transition to the Case of Forward Scattering	642
§ 53. Conclusion.	643
Appendix I. A List of Singular Functions	648
Appendix II. Mathematical Appendix	654
References	710
Author Index	715
Subject Index	717
