CONTENTS

INTRODUCTION 1

CHAPTER 1. CLASSICAL THEORY OF FREE FIELDS

§ 1. Lagrangian Formalism 7

1.1 Fields and Particles (7). 1.2 Hamiltonian and Lagrangian Formalism (8). 1.3 Lagrangian Function and Principle of Stationary Action (9). 1.4 Transformation Properties of the Field Functions. Tensors and Spinors (11). 1.5 Other Groups of Transformations.

§ 2. Noether's Theorem and Dynamic Invariants 15

2.1 Noether's theorem (16). 2.2 Energy-momentum Vector (19). 2.3 Angular Momentum Tensor and Spin Tensor (20). 2.4 Isotopic Spin, Charge and Current Vector . . . . .

§ 3. Scalar Field 24

3.1 Lagrangian Formalism for a Real Scalar Field (25). 3.2 Momentum Representation and Positive- and Negative-Frequency Components (26). 3.3 The Discrete Momentum Representation (30). 3.4 The Complex Scalar Field (31). 3.5 The Pion Field (33).

§ 4. The Vector Field 35

4.1 Lagrangian, Subsidiary Conditon, and Invariants (35). 4.2 Transition to the Momentum Representation (38). 4.3 Spin of the Vector Field (40). 4.4 Klein-Gordon Equations Written in the Form of a System of First-Order Equations (41).

§ 5. The Electromagnetic Field 45

5.1 Potential of the Electromagnetic Field (45). 5.2 Gauge Transformation of the Second Kind and the Lorentz Condition (46). 5.3 Lagrangian Formalism (47). 5.4 Transverse, Longitudinal, and Time Components (49). 5.5 Spin (50).

§ 6. The Spinor Field. Dirac Matrices and Transformation Laws for Spinor Functions 51

6.1 Factorization of the Klein-Gordon Operator (51). 6.2 Dirac Matrices (53). 6.3 The Dirac Equation (56). 6.4 Transformation Properties of the Spinor Field (57).

§ 7. The Spinor Field. Properties of the Solutions and Dynamic Variables . . 63

7.1 Momentum Representation and Matrix Structure (63). 7.2 Decomposition into Spin States and Normalization and Orthogonality Relations (66). 7.3 Lagrangian Formalism and Invariants (69). 7.4 Spinor Field with Zero Mass (73).

§ 8. Lagrangian of a System of Fields 75

8.1 The Interaction Lagrangian and Invariants of a System of Fields (76). 8.2 Local Phase Transformations and Gauge Fields (77). 8.3 The Yang-Mills Field (79). 8.4 Dynamic Invariance of a System of Fields (81).

CHAPTER 2. QUANTUM THEORY OF FREE FIELDS

§ 9. General Principles of Quantization of Wave Fields 85
9.1 Operator Nature of Field Functions and State Amplitude (85). 9.2 Representations of the Schroedinger Equation (86). 9.3 Transformation Properties of the State Amplitude and Field Operators (87). 9.4 Quantization Postulate for Wave Fields (89). 9.5 The Physical Meaning of the Positive- and Negative-Frequency Components and of Adjoint Functions (91).

§10. Setting Up the Commutation Relations 95
10.1 Types of Commutation Relations (95). 10.2 Fermi-Dirac and Bose-Einstein Commutation Relations (98). 10.3 Connection of Spin with Statistics. Pauli's Theorem (100). 10.4 Normal Product of Operators and the Form of Dynamic Variables (102). 10.5 Commutation Relations in the Discrete Momentum Representation (104).

§11. Scalar and Vector Fields 107
11.1 Real and Complex Scalar Fields (107). 11.2 Pion Field (110). 11.3 Complex Vector Field (111). 11.4 Hamiltonian Formalism and Canonical Quantization (113).

§12. The Electromagnetic Field 116
12.1 Singularities of the Electromagnetic Field and the Quantization Procedure (116). 12.2 Indefinite Metric (118). 12.3 The Form of the Basic Quantities (122).

§13. The Spinor Field 123
13.1 Fermi-Dirac Quantization and Commutation Functions (123). 13.2 Dynamic Variables (124). 13.3 The Quantized Neutrino Field (126). 13.4 Charge Conjugation (127).

§14. CPT Theorem 131
14.1 Charge Conjugation in the Quantized Case (131). 14.2 P-transformation (133). 14.3 Time Reversal (134). 14.4 CPT Theorem (136).

CHAPTER 3. SINGULAR FUNCTIONS AND REGULARIZATION

§15. Green's Functions 139
15.1 Green's functions for the scalar field (140). 15.2 Causal Green's function for a scalar field (141). 15.3 Causal Green's functions for different fields (143).

§16. Properties of Green's Functions and Regularization 147
16.1 Evaluation of D^+ and D^- Functions (147). 16.2 Explicit Form and Singularities of the Functions $D(x)$ and $D^c(x)$ (149). 16.3 Pauli-Villars Regularization (151).

§17. Reduction to Normal Form 154
17.1 The Coefficient Functions of Operator Expressions (154). 17.2 Wick's Theorem for Normal Products (156). 17.3 Some Definitions (163).

§18. Coefficient Functions 165
18.1 Improper Nature of Singular Functions (165). Some Properties of Pauli-Villars Regularization (170).

§19. Multiplication of Operator Functions 173
19.1 Multiplication of Singular Functions (173). 19.2 Some Properties of Singular Functions (180). 19.3 Multiplication of Operator Functions (180).

CHAPTER 4. SCATTERING MATRIX

§20. Basic Concepts of the Theory of Interacting Fields 185
20.1 Introduction (185). 20.2 Interaction Representation (187). 20.3 The Scattering Matrix (189). 20.4 Relativistic Covariance and Unitary Nature of the S-Matrix (190). 20.5 The Condition of Causality (192). 20.6 "Classical Fields" as Arguments of Functionals (195).

§21. The Interaction Lagrangian and the S-Matrix 196
21.1 Expansion of the S-Matrix in Powers of the Interaction (196). 21.2 Conditions of Covariance, Unitarity, and Causality for S_n (197). 21.3 Explicit Form of $S_1(x)$ *and* $S_2(x, y)$ (200). 21.4 Chronological Product of Local Operators (204). 21.5 Determination of the Functions S_n for Arbitrary n (205). 21.6 Analysis of the Arbitrariness of the Functions S_n and the Most General Form of $S(g)$ (207).

§22. Evaluation of Chronological Products 213
22.1 Chronological Pairing (213). 22.2 Wick's Theorem for Chronological Products (218).
§23. Reduction of the S-Matrix to the Normal Form 220
23.1 Structure of the Coefficients of the Scattering Matrix (220). 23.2 Feynman Diagrams and Rules of Correspondence (222). 23.3 Examples (227). 23.4 Concluding Remarks (229).
§24. Feynman's Rules for the Evaluation of Matrix Elements of the Scattering Matrix 230
24.1 Transition to the Momentum Representation (230). 24.2 Evaluation of Matrix Elements (232). 24.3 Taking Account of Symmetry Properties (236). 24.4 Scattering by External Fields (239). 24.5 General Structure of the Matrix Elements (240).
§25. Probabilities of Scattering Processes and Effective Cross Sections 244
25.1 Normalization of the State Amplitude (244). 25.2 Calculation of Transition Probabilities (246). 25.3 Two-Particles Scattering (248). 25.4 Effective Scattering Cross Sections (249). 25.5 Two-Particle Decay (251).
§26. Examples of Calculation of Second-Order Processes 253
26.1 Compton Scattering (253). 26.2 Annihilation of an Electron-Positron Pair (257). 26.3 Bremsstrahlung (260).

CHAPTER 5. REMOVAL OF DIVERGENCES FROM THE S-MATRIX

§27. On the Divergences of the S-Matrix in Electrodynamics (Second Order) 265
27.1 Divergent Diagram with Two External Electron Lines Σ (266). 27.2 Segregation of the Divergent Part of Σ (270). 27.3 Divergent Diagram with Two External Photon Lines II (273). 27.4 Segregation of the Divergences from II and Gauge Invariance (275). 27.5 Construction of an Integrable S_2 (277).
§28. Divergences of the S-Matrix Electrodynamics (Third Order) 279
28.1 Vertex Diagram of the Third Order (279). 28.2 Segregation of the Divergence from Γ and Gauge Invariance (281). 28.3 Ward's Identity (285). 28.4 Construction of an Integrable Function S_3 (286).
§29. General Rules for the Removal of Divergences from the S-Matrix 288
29.1 Formulation of the Problem (288). 29.2 General Method for Removing Divergences (289). 29.3 Graphical Representation of the Subtraction Procedure and the R-Operation (291). 29.4 Index of the Diagram $\omega(G)$ and the Degree of Divergence (294). 29.5 Structure of the Exponential Quadratic Form (298). 29.6 Choice of the Operation $\Delta(G)$ (303).
§30. Structure of the R-Operation 305
30.1 Factorization of the R-Operation (305). 30.2 Parametric Representation (307). 30.3 Transition to the Limit $\epsilon \to 0$ (310).
§31. Analytic Properties of the Coefficient Functions in the Momentum Representation 314
31.1 Analytic Properties of S_n (314). 31.2 Structure of the Functions H_n (315). 31.3 Analytic Properties of H_n (316).
§32. Classification of the Renormalizability of Different Theories 318
32.1 Interactions of the First and Second Kinds (318). 32.2 Summary of Interactions of the First Kind (321). 32.3 Nature of Interactions of the Second Kind (323). 32.4 Specification of a Theory of the First Kind by a Finite Number of Constants (326).

CHAPTER 6. APPLICATIONS OF THE GENERAL THEORY OF REMOVAL OF DIVERGENCES

§33. Spinor Electrodynamics. I. General Form of Counter Terms 329
33.1 Types of Divergent Diagrams and Furry's Theorem (329). 33.2 Gauge Invariance of the Scattering Matrix (334). 33.3 Ward's Identities (341). 33.4
33.4 Counterterms (344).

§34. Spinor Electrodynamics. II. Mass and Charge Renormalization 345
34.1 Gauge Transformation of the Pairing $\overline{AA}$ (345). 34.2 Nonuniqueness of the Process of Removal of Infinities (347). 34.3 Complete Green's Functions, G, D, and the Vertex Part Γ (352). 34.4 Radiative Corrections to External Lines and the Choice of Finite Constants (357).
§35. Spinor Electrodynamics. III. Radiative Corrections of the Second Order 361
35.1 Correction to the Photon Function (361). 35.2 Corrections to the Electron Green's Function (364). 35.3 Corrections to the Vertex Part (366). 35.4 Evaluation of Corrections to the Klein-Nishina Formula (367).
§36. Some Models of Strong Interactions 369
36.1 The φ^3 Model (369). 36.2 Pseudoscalar Field with Nonlinear Interaction (374). 36.3 Pseudoscalar Model of the Meson-Nucleon Interaction (377). 36.4 Second Charge, Multiplicative Renormalizations, and External Lines (379).
§37. Complete Green's Functions and Vertex Functions 380
37.1 Higher Green's Functions (380). 37.2 Sources and Generating Functionals (383). 37.3 Generating Functional for the Higher Green's Function (386). 37.4 Vertex Functions (388).
§38. Schwinger and Dyson Equations 391
38.1 Generalized Wick's Theorem (391). 38.2 Reduction Formulas (396). 38.3 Schwinger's Equations (398). 38.4 Dyson's Equations (400). 38.5 Taking Counterterms into Account (403).

CHAPTER 7. SCHROEDINGER EQUATIONS AND DYNAMIC VARIABLES

§39. Schroedinger Equation for the State Amplitude 405
39.1 Equation for $\Phi(g)$ in Terms of Variational Derivatives (405). 39.2 Schroedinger Equation in the Interaction Representation and the Tomonaga-Schwinger Equation (407). 39.3 Singularities of the Generalized Hamiltonian (411). 39.4 Fundamental Properties of the Generalized Hamiltonian (415).
§40. Dynamic Variables of a System of Interacting Fields 417
40.1 Energy, Momentum, and the Angular-Momentum Tensor (417). 40.2 Local Dynamic Variables (421). 40.3 The Current Vector (424). 40.4 The Lorentz Condition (426). 40.5 Wave Field Operators (427).
§41. Vacuum Polarization and the Anomalous Magnetic Moment of the Electron 428
41.1 Vacuum Polarization (428). 41.2 Anomalous Magnetic Moment of the Electron (433).
§42. Dirac Equation with Radiative Corrections 439
42.1 Generalization of the Electron Wave Function (439). 42.2 Generalization of the Dirac Equation (443). 42.3 Lamb Shift (446).

CHAPTER 8. METHOD OF FUNCTIONAL AVERAGING

§43. Functional Integrals in Quantum Field Theory 451
43.1 Introduction (451). 43.2 Evaluation of $\left\langle T\left(\exp i\int v\varphi\, dp\right)\right\rangle_0$ (452) 43.3 Functional Integrals (455). 43.4 Functional Integral over Fermi Fields (459).
§44. Generating Functionals and Green's Functions 462
44.1 Basic Quantities Expressed in Terms of Functional Integrals (462). 44.2 Representations for Green's Functions in the Form of Functional Bose Integrals (464).
§45. Gauge Transformations in Spinor Electrodynamics 466
45.1 Functional Integral in Arbitrary Gauge (466). 45.2 Gauge Invariance of the Scattering Matrix (470). 45.3 Generalized Ward's Identities (471). 45.4 Transition to the Transverse Gauge (474). 45.5 Gauge Transformation of Green's Functions (476).
§46. Investigation of the Bloch-Nordsieck Model 478
46.1 The Bloch-Nordsieck Model and the Determination of $G(x, y \mid A)$ (478). 46.2 Evaluation of $G(x, y)$ (481).

CHAPTER 9. THE RENORMALIZATION GROUP

§47. The Group of Multiplicative Renormalizations in Quantum Field Theory . 485
47.1 Introduction (485). 47.2 Group Character of Multiplicative Renormalizations (486). 47.3 Momentum Representation (489). 47.4 Derivation of Functional Equations (491).

§48. General Analysis of Group Equations 494
48.1 Structure of Functional Equations (494). 48.2 Differential Equations (498). 48.3 General Solution of the Equations (500).

§49. Asymptotic Analysis in the Ultraviolet Region 503
49.1 Asymptotic Solutions for the Invariant Charge (503). 49.2 Asymptotic Behavior of Invariant Charge (508). 49.3 Asymptotic Green's Functions (512). 49.4 Higher Green's Functions (515).

§50. Analysis of Green's Functions in Spinor Electrodynamics 515
50.1 Formulation of the Problem (515). 50.2 Asymptotic Behavior in the Ultraviolet (516). 50.3 Asymptotic Behavior of the Electron Green's Function in the Infrared (520). 50.4 Matrix Elements and Transition Probabilities (520).

§51. Strong-Interaction Models 521
51.1 Main Logarithmic Approximation of the φ^4 Model (522). 51.2 Second Logarithmic Approximations (524). 51.3 Reliability of Results (526). 51.4 Two-Charge Model (527). 51.5 Symmetric Asymptotic Behavior of the Higher Green's Functions (531). 51.6 Conclusion. Hypothesis of Finite Renormalization of Coupling Constants (532).

CHAPTER 10. DISPERSION RELATIONS

§52. Basic Properties of the *S*-Matrix in Local Field Theory 535
52.1 Introduction (535). 52.2 General Properties of the Scattering Matrix. (538). 52.3 Local Properties (541). 52.4 Optical Theorem (544).

§53. Spectral Representation of the Pion Green's Function 545
53.1 Radiation Operators of the First and Second Order (545). 53.2 Vacuum Expectation Value of the Product and the Commutator of Two Currents (548). 53.3 Analytic Properties of Q^r and Q^a (551). 53.4 Spectral Representation for q^r, q^a, and q^c (554).

§54. Spectral Representation of the Fermion Green's Function 558
54.1 Radiation Fermi Operators (558). 54.2 Derivation of the Spectral Representation (560). 54.3 Proximity to a Contradiction (563).

§55. The Jost-Lehmann-Dyson Representation 564
55.1 Formulation of the Problem (564). 55.2 General Form of Representation (566). 55.3 Region of Integration (570). 55.4 Some Consequences (572).

§56. Derivation of Dispersion Relations for Pion-Nucleon Scattering 574
56.1 Connection between Scattering Amplitude and the Retarded and Advanced Matrix Elements (574). 56.2 Transition to a Fixed Frame of Reference. Difficulties of Analytic Continuation (578). 56.3 Outline of the Method of Obtaining Dispersion Relations for Forward Scattering (580). 56.4 The Case of Scattering with $p \neq 0$ (585).

§57. Dispersion Relations for Pion-Nucleon Forward Scattering 586
57.1 Transition to Real Quantities (586). 57.2 Isospin and Spin Structure (590). 57.3 Symmetry in Energy (591). 57.4 Physical Dispersion Relations (592). 57.5 Further Development of the Method (593).

APPENDIX I. ELEMENTS OF ISOSPIN FORMALISM 596

APPENDIX II. LIST OF SINGULAR FUNCTIONS 602

APPENDIX III. LIST OF FORMULAS FOR THE EVALUATION OF MATRIX ELEMENTS 609
