# CONTENTS

Preface xi

Introduction . . . . . 1

**Chapter 1: THE GENERAL PRINCIPLES OF QUANTUM THEORY** 5

1. The Postulates of Quantum Theory . . . . . 5
   The Time Evolution of a System . . . . . 10
   Causality . . . . . 16
2. Symmetries . . . . . 19
3. Canonical Quantization . . . . . 23

**Chapter 2: NON-RELATIVISTIC QUANTUM MECHANICS** 26

4. The Quantum Mechanics of a Particle . . . . . 26
   The Particle Propagator . . . . . 27
   The Scattering Amplitude . . . . . 29
   The *S* Matrix . . . . . 35
5. The Many-Particle System . . . . . 38
   Spin and Statistics . . . . . 38
   Scattering in an External Potential . . . . . 40
   The Occupation-Number Representation . . . . . 42
   Creation and Annihilation Operators . . . . . 45
   Field Operators . . . . . 48
   Scattering and the S Operator . . . . . 61
   The Theory of Propagators and Feynman Diagrams . . . . . 71

**Chapter 3: THE CLASSICAL THEORY OF THE ELECTROMAGNETIC FIELD** 87

6. The Tensor Description of the Electromagnetic Field and the Field Equations . . . . . 87
   The Field Equations . . . . . 88
   Transformation Laws . . . . . 90
   Energy-Momentum Tensor of Electromagnetic Field . . . . . 91
   The Conservation Laws . . . . . 92
7. Canonical Formalism for the Electromagnetic Field . . . . . 95
   The Generalized Poisson Brackets . . . . . 97

Canonical Transformations and Their Generators . . . . . 100
Poincaré Transformations as Canonical Transformations . . . . 103
8. The Electromagnetic Field with Sources . . . . . 106
Charged Fluid . . . . . 107
Charged Particles . . . . . 110
Magnetic Charges . . . . . 117
Charged Field . . . . . 119
9. The Maxwellian Field . . . . . 123
Solution of the Initial-Value Problem and the Poisson Brackets 123
Fourier Analysis of the Field . . . . . 127
Conformal Transformations . . . . . 134
The Maxwellian Field with External Sources . . . . . 138
The Radiation Field . . . . . 139
Multipole Radiation . . . . . 144
Radiation of a Point Particle . . . . . 151

**Chapter 4: THE QUANTUM THEORY OF THE ELECTROMAGNETIC FIELD** 156

10. Canonical Quantization of the Electromagnetic Field . . . . . 156
The Poincaré Group as a Symmetry Group . . . . . 157
11. Quantization of the Free Maxwellian Field . . . . . 161
Relativistic Invariance . . . . . 167
Photons . . . . . 169
Coherent States . . . . . 173
Coherence of Electromagnetic Radiation . . . . . 178
12. The Interaction of the Quantum Electromagnetic Field with External Sources . . . . . 186
13. The Formulation of the Quantum Theory of the Maxwellian Field with the Aid of Potentials . . . . . 195
The Classical Theory . . . . . 197
The Quantum Theory of the Free Field . . . . . 198
The Quantum Theory of the Electromagnetic Field with External Sources . . . . . 201
The Poincaré Group as the Symmetry Group of Amplitudes . . 205
A Simple Representation of Transition Amplitudes . . . . . 207
Induced Processes in Intense Photon Beams . . . . . 212
Many-Photon Propagators . . . . . 213
14. The Proca Theory . . . . . 215
The Classical Theory of a Vector Field with Mass . . . . . 215
The Quantum Theory of a Vector Field with Mass . . . . . 219
The S Operator in the Presence of External Sources . . . . . 222
15. The Infrared Catastrophe . . . . . 224

**Chapter 5: RELATIVISTIC QUANTUM MECHANICS OF ELECTRONS** 230

16. The Dirac Equation and the Symmetries of Its Solutions . . . . 230
The Properties of Solutions of the Dirac Equation without Potential . . . . . 241
17. Electron Scattering in the Electromagnetic Field . . . . . 247
Electron Wave Functions . . . . . 260
The Green's Functions for the Dirac Equation . . . . . 265
The Electron in a Static Electromagnetic Field . . . . . 273
The Properties of the $S$ Matrix for an Electron in an External Field . . . . . 277
The Indistinguishability of Particles and the Vacuum-to-Vacuum Transition Amplitude . . . . . 286
18. Electron Field Operators . . . . . 293
Creation and Annihilation Operators . . . . . 293
Field Operators . . . . . 296
Electrons in an External Electromagnetic Field . . . . . 300
The S Operator . . . . . 302
Propagators . . . . . 307

**Chapter 6: THE FORMULATION OF QUANTUM ELECTRODYNAMICS** 311

19. The General Postulates of Quantum Electrodynamics . . . . . 311
The Fundamental Dynamical Postulate . . . . . 314
20. Perturbation Theory and Feynman Diagrams . . . . . 316
The General Principles of Constructing Feynman Diagrams. 318
Analysis of the Connectedness of Propagators . . . . . 327
21. Photon Processes . . . . . 339
The Relation between Transition Amplitudes and Propagators 340
The Källén–Lehmann Representation of the Photon Propagator 347
Renormalization of an External Current . . . . . 351
22. Electron-Photon Processes . . . . . 352
Compensating Current . . . . . 352
Electron-Photon Propagators . . . . . 355
The Relation between the Compensating Current and the Gauge 356
Feynman Diagrams . . . . . 359
The Relation between Propagators and Transition Amplitudes. 368
Feynman Diagrams in Momentum Representation . . . . . 374

**Chapter 7: RENORMALIZATION THEORY** 382

23. The Necessity for Renormalization . . . . . 382
The Electron Propagator . . . . . 382
The Photon Propagator . . . . . 393

The Vertex Function . . . . . 396
Charge Renormalization . . . . . 399
24. Equations for Renormalized Propagators . . . . . 402
Set of Equations for Propagators . . . . . 403
Elimination of the Field $\mathscr{A}_\mu(z)$ . . . . . 405
Gauge Invariance and the Ward Identity . . . . . 410
Symmetric Expressions for the Electron and Photon Propagators and the Vertex Function . . . . . 413
The Skeleton Structure of Diagrams . . . . . 419
Renormalization . . . . . 423
25. Renormalized Perturbation Theory . . . . . 426
The General Properties of Renormalized Perturbation Theory . 426
Renormalized Transition Probabilities . . . . . 430
Independence of Transition Probabilities from the Compensating Current . . . . . 436
The Infrared Catastrophe . . . . . 437

**Chapter 8: APPLICATIONS OF QUANTUM ELECTRODYNAMICS** 439

26. Two-Particle Collisions . . . . . 439
The General Formulae for Two-Particle Processes . . . . . 439
Negaton-Negaton Scattering . . . . . 445
Photon-Negaton Scattering . . . . . 448
Photon-Photon Scattering . . . . . 451
27. Non-linear Effects in Quantum Electrodynamics . . . . . 452
28. The Electron in a Static Electromagnetic Field . . . . . 455
The Effective Field and the Polarization of the Vacuum . . . 455
The Motion of the Electron in a Static Field . . . . . 459
The Magnetic Moment of the Electron . . . . . 461
The Lamb-Retherford Shift . . . . . 464
29. The Limits of Applicability of Quantum Electrodynamics . . . 466
*Concluding Remarks* . . . . . 470
*Appendices* . . . . . 473
Appendix A: Hilbert Space 473
Linear Operators . . . . . 473
Appendix B: Chronological and Normal Products 477
The Chronological Product . . . . . 477
The Normal Product . . . . . 480
Appendix C: Functional Differentiation 482
Appendix D: The Poincaré Group 485
Appendix E: Green's Functions 491
The Schrödinger Equation . . . . . 492
The Klein-Gordon and d'Alembert Equations . . . . . 493
The Dirac and Proca Equations . . . . . 497

Appendix F: The Symmetric Energy-Momentum Tensor 499
Appendix G: Evaluation of Some Poisson Brackets 502
Appendix H: Some Operator Identities 504
Appendix I: Spinors 508
Appendix J: The Properties of Solutions of the Dirac Equations 516
Appendix K: Regularization 519
Appendix L: Methods of Calculating Integrals over Momentum Space 522
Appendix M: Representation of the *S* Matrix as a Double Limit of the Propagator . . . . . 525
**REFERENCES** 527
Articles . . . . . 527
Textbooks and Monographs . . . . . 533
**INDEX OF SYMBOLS** . . . . . 535
**SUBJECT INDEX** . . . . . 541
**OTHER TITLES IN THE SERIES IN NATURAL PHILOSOPHY** . . . 549
