

# CONTENTS

Foreword	vii
Introduction	1
Chapter 1. The $S$ -matrix	3
1. The interaction representation. The $S$ -matrix	3
Chapter 2. Classical Fields	10
2. Equations of motion	10
3. Conserved quantities	15
Chapter 3. Field Quantization	23
4. The real scalar (pseudoscalar) field	23
5. The complex scalar (pseudoscalar) field	32
6. The complex spinor field	37
7. The electromagnetic field	48
Chapter 4. Expansion of Chronological Products in Normal Products	58
8. The interaction Hamiltonians. Normal and chronological products of the field operators	58
9. Wick's theorem	68
Chapter 5. Rules for Constructing Feynman Diagrams	75
10. Electron scattering by an external electromagnetic field. Feynman diagrams	75
11. Processes in which electrons, positrons, and photons take part	83
Scattering of a photon by an electron	83
Electron-electron scattering	92
Processes in which positrons take part	95
12. Currents. Form factors	101
Chapter 6. Calculation of the Cross Sections and Decay Probabilities	122
13. Cross sections. Traces	122
14. Electron scattering on a nucleon	127
15. The process $\nu_\mu + n \rightarrow \mu^- + p$	133
16. The scattering of $\pi$ -mesons by nucleons	138
17. The decay $\Lambda \rightarrow p + l^- + \bar{\nu}$	146
18. The decay $K^- \rightarrow \pi^0 + l^- + \bar{\nu}$	150
19. The decay $\pi^0 \rightarrow 2\gamma$	160
Appendix. Solution of the Free Dirac Equation	167
The covariant density matrix for particles with spin $\frac{1}{2}$	167
Index	185
Other Titles in the Series in Natural Philosophy	187
