

CONTENTS

Editors' Foreword	v	
Preface to First Edition	vii	
Preface to Second Edition	ix	
PART I	THEORY OF ATOMIC STRUCTURE	1
Chapter 1	MISCELLANEOUS RESULTS FROM ELEMENTARY QUANTUM MECHANICS	3
	Schrödinger Equation	3
	Approximate Methods of Solution	5
	Constants of Motion	10
	Spin	12
	Description of Spin $\frac{1}{2}$ Particles	14
	Problems	16
Chapter 2	IDENTICAL PARTICLES AND SYMMETRY	18
	Arguments for Simple Symmetry	19
	Symmetry for Composite Systems	23
	Construction of Symmetrized Wave Functions	23
	Statistical Mechanics	24
	Experimental Determination of Symmetry	25
	Classical Limit	26
	Problems	27

Chapter 3	TWO-ELECTRON ATOMS	29
	Classification of Solutions	29
	Perturbation Calculation	30
	Variation Calculation	42
	Ionization Potential for Higher Z Atoms	47
	Excited States	48
	Problems	49
Chapter 4	SELF-CONSISTENT FIELD	51
	Intuitive Preliminaries	51
	Variation Derivation	53
	Matrix Elements Between Determinantal Wave Functions	54
	Derivation of the Hartree-Fock Equations	56
	Discussion of the Exchange Term	60
	Physical Significance of the Eigenvalue	63
	Spherical Symmetry and the Hartree-Fock Equations	64
	Approximate Treatment of Exchange Term	71
	Results of Calculations	74
	High n	78
	Periodic System	79
	Problems	82
Chapter 5	STATISTICAL MODELS	83
	Thomas-Fermi Model	83
	Solutions of the Thomas-Fermi Equation	86
	Determination of Additional Boundary Conditions	87
	Applications	89
	Validity of the Thomas-Fermi Method	90
	Correction for Exchange; The Thomas-Fermi-Dirac Equation	91
	Problems	98
Chapter 6	ADDITION OF ANGULAR MOMENTA	101
	Angular Momentum	102
	Addition of Angular Momenta	105
	Clebsch-Gordan Coefficients	106
	Special Cases	111

	Addition of Angular Momenta for Identical Particles	113
	Addition of Angular Momenta for Equivalent Electrons	114
	Problems	119
Chapter 7	THEORY OF MULTIPLETS, ELECTROSTATIC INTERACTION	120
	Discussion of Matrix Elements	122
	Slater Sum Rule	130
	Equivalence of Holes and Electrons	133
	Evaluation of Integrals	134
	Sample Calculation	136
	Comparison with Experimental Results	139
	Average Energy	141
	Configuration Interaction	147
	Problems	148
Chapter 8	THEORY OF MULTIPLETS, SPIN-ORBIT INTERACTION, AND INTERACTIONS WITH EXTERNAL FIELDS	149
	Interaction with a Constant External Magnetic Field	149
	Spin-Orbit Interaction for Atoms	151
	A Theorem About Matrix Elements	156
	Evaluation of the Spin-Orbit Interaction	161
	Comparison with Experiment	167
	Zeeman Effect	168
	Paschen-Back Effect	169
	Quadratic Zeeman Effect	170
	Stark Effect	172
	Problems	174
Chapter 9	MOLECULES	177
	Born-Oppenheimer Approximation	177
	Hydrogen Molecule	180
	Diatomic Molecules	183
	Symmetry for Homonuclear Diatomic Molecules	185
	Problems	187

PART II	SEMICLASSICAL RADIATION THEORY	189
Chapter 10	SEMICLASSICAL THEORY OF RADIATION	191
	Schrödinger Equation	191
	Absorption and Induced Emission	192
	Monochromatic External Fields	193
	Nonmonochromatic External Fields	197
	Multipole Transitions	201
	Spontaneous Emission	202
	Einstein Transition Probabilities	204
	Line Breadth	206
	Problems	207
Chapter 11	INTENSITY OF RADIATION, SELECTION RULES	209
	Sum Rules	209
	Summary	215
	Many Electrons	216
	Hydrogen	217
	Selection Rules and Matrix Elements	219
	Selection Rules for Many Electrons	223
	Higher Moments	225
	Absolute Transition Probabilities	227
	Problems	230
Chapter 12	PHOTOELECTRIC EFFECT	231
	Born Approximation	231
	Dipole Approximation	233
	Rough Estimate	236
	Problems	237
PART III	ATOMIC COLLISIONS	239
Chapter 13	ELASTIC SCATTERING AT HIGH ENERGIES	241
	Elastic Scattering in the Born Approximation	242
	Calculation of Form Factors	246
	Comparison with Experiment	248
	Problems	251
Chapter 14	ELASTIC SCATTERING AT LOW ENERGIES	252
	Ramsauer-Townsend Effect	257

	Polarization of Atom by Incident Particle	262
	Problems	263
Chapter 15	FURTHER CORRECTIONS TO ELASTIC SCATTERING FORMULAS	265
	Electron Exchange	265
	Shadow Scattering	268
	Problems	279
Chapter 16	ELASTIC SCATTERING OF SPIN $\frac{1}{2}$ PARTICLES	280
	Generalization	284
	Density Matrix	286
	Problems	292
Chapter 17	INELASTIC SCATTERING AT HIGH ENERGIES	294
	Results of Calculation and Comparison with Experiment	301
	Energy Loss of the Incident Particle	302
	Problems	308
Chapter 18	INELASTIC SCATTERING AT LOW ENERGIES	309
	Validity of Distorted Wave Approximation	313
	Results of Calculation and Comparison with Experiment	316
	Further Corrections	318
	Close Coupling Approximation	318
	Collision Complex	319
	Problems	320
Chapter 19	SEMICLASSICAL TREATMENT OF INELASTIC SCATTERING	321
	Equivalence with Born Approximation	326
	Problems	329
Chapter 20	CLASSICAL LIMIT OF QUANTUM MECHANICAL SCATTERING; SUMMARY	330
	Forward Scattering	335
	Summary of Methods	337
	Problems	337

PART IV	RELATIVISTIC EQUATIONS	339
Chapter 21	KLEIN-GORDON EQUATION	341
	Physical Interpretation of the Klein-Gordon Equation	342
	Interaction with External Electromagnetic Field	344
	Coulomb Field	345
	Problems	348
Chapter 22	DIRAC EQUATION, FORMAL THEORY	349
	Derivation of the Dirac Equation	349
	Dirac Matrices I	352
	Covariant Form of the Dirac Equation	353
	Dirac Matrices II	355
	Explicit Form of the Dirac Matrices	359
	Relativistic Invariance of the Dirac Equation	360
	Explicit Transformation Matrix	364
	Problems	365
Chapter 23	SOLUTIONS OF THE DIRAC EQUATION	366
	Free-Particle Solution	366
	Physical Interpretation of Dirac Matrices	368
	Spin	370
	Dirac Equation in External Field	372
	Nonrelativistic Limit	374
	Exact Solution of Dirac Equation for Coulomb Potential	378
	Negative Energy Solutions	383
	Perturbation Theory	384
	Problems	387
Index		389
