
Contents

1. The Introduction of Quarks	1
1.1 The Hadron Spectrum	1
2. Review of Relativistic Field Theory	17
2.1 Spinor Quantum Electrodynamics	17
2.1.1 The Free Dirac Equation and Its Solution	17
2.1.2 Density and Current Density	19
2.1.3 Covariant Notation	20
2.1.4 Normalization of Dirac Spinors	21
2.1.5 Interaction with a Four-Potential A^μ	22
2.1.6 Transition Amplitudes	23
2.1.7 Discrete Symmetries	23
2.2 Scalar Quantum Electrodynamics	24
2.2.1 The Free Klein–Gordon Equation and Its Solutions	24
2.2.2 Interaction of a π^+ with a Potential A_μ	27
2.2.3 π^+K^+ Scattering	30
2.2.4 The Cross Section	32
2.2.5 Spin-1 Particles and Their Polarization	42
2.2.5.1 Massive Spin-1 Particles	42
2.2.5.2 Massless Spin-1 Particles: Photons	46
2.2.6 The Propagator for Virtual Photons	48
2.3 Fermion–Boson and Fermion–Fermion Scattering	53
2.3.1 Traces and Spin Summations	54
2.3.2 The Structure of the Form Factors from Invariance Considerations	63
3. Scattering Reactions and the Internal Structure of Baryons	69
3.1 Simple Quark Models Compared	69
3.2 The Description of Scattering Reactions	72
3.3 The MIT Bag Model	108
4. Gauge Theories and Quantum-Chromodynamics	131
4.1 The Standard Model – A Typical Gauge Theory	131
4.2 The Gauge Theory of Quark–Quark Interactions	140
4.3 Dimensional Regularization	154
4.4 The Renormalized Coupling Constant of QCD	168

5. Perturbative QCD I: Deep Inelastic Scattering	181
5.1 The Gribov–Lipatov–Altarelli–Parisi Equations	181
5.2 An Alternative Approach to the GLAP Equations	202
5.3 Common Parametrizations of the Distribution Functions and Anomalous Dimensions	215
5.4 Renormalization and the Expansion Into Local Operators	224
5.5 The Spin-Dependent Structure Functions	248
5.6 The Spin-Dependent Structure Functions in the MIT Bag Model	257
6. Perturbative QCD II: The Drell–Yan Process and the Gribov–Levin–Ryskin Equation	267
6.1 The Drell–Yan Process	267
6.2 Small- x Physics and the Gribov–Levin–Ryskin Equation	297
7. Nonperturbative QCD	311
7.1 Lattice Gauge Theories	311
7.2 Lattice Theories at Finite Temperature	350
7.3 QCD Sum Rules	363
8. Phenomenological Models for Non-Perturbative QCD Problems	387
8.1 The Ground State of QCD	387
8.2 The Quark-Gluon Plasma	401
Subject Index	411
