
Contents

1. The Quantization of Physical Quantities	1
1.1 Light Quanta	1
1.2 The Photoelectric Effect	1
1.3 The Compton Effect	2
1.4 The Ritz Combination Principle	4
1.5 The Franck-Hertz Experiment	4
1.6 The Stern-Gerlach Experiment	5
1.7 Biographical Notes	5
2. The Radiation Laws	9
2.1 A Preview of the Radiation of Bodies	9
2.2 What is Cavity Radiation?	10
2.3 The Rayleigh-Jeans Radiation Law – The Electromagnetic Eigenmodes of a Cavity	13
2.4 Planck's Radiation Law	15
2.5 Biographical Notes	25
3. Wave Aspects of Matter	27
3.1 De Broglie Waves	27
3.2 The Diffraction of Matter Waves	31
3.3 The Statistical Interpretation of Matter Waves	35
3.4 Mean (Expectation) Values in Quantum Mechanics	40
3.5 Three Quantum Mechanical Operators	43
3.6 The Superposition Principle in Quantum Mechanics	44
3.7 The Heisenberg Uncertainty Principle	47
3.8 Biographical Notes	60
4. Mathematical Foundations of Quantum Mechanics I	63
4.1 Properties of Operators	63
4.2 Combining Two Operators	64
4.3 Bra and Ket Notation	65
4.4 Eigenvalues and Eigenfunctions	65
4.5 Measurability of Different Observables at Equal Times ...	72
4.6 Position and Momentum Operators	73
4.7 Heisenberg's Uncertainty Relations for Arbitrary Observables	74
4.8 Angular-Momentum Operators	75

4.9	Kinetic Energy	79
4.10	Total Energy	79
4.11	Biographical Notes	95
5.	Mathematical Supplement	99
5.1	Eigendifferentials and the Normalization of Eigenfunctions for Continuous Spectra	99
5.2	Expansion into Eigenfunctions	100
6.	The Schrödinger Equation	107
6.1	The Conservation of Particle Number in Quantum Mechanics	132
6.2	Stationary States	134
6.3	Properties of Stationary States	135
6.4	Biographical Notes	142
7.	The Harmonic Oscillator	145
7.1	The Solution of the Oscillator Equation	150
7.2	The Description of the Harmonic Oscillator by Creation and Annihilation Operators	159
7.3	Properties of the Operators \hat{a} and \hat{a}^+	160
7.4	Representation of the Oscillator Hamiltonian in Terms of \hat{a} and \hat{a}^+	161
7.5	Interpretation of \hat{a} and \hat{a}^+	162
7.6	Biographical Notes	168
8.	The Transition from Classical to Quantum Mechanics	171
8.1	Motion of the Mean Values	171
8.2	Ehrenfest's Theorem	172
8.3	Constants of Motion, Laws of Conservation	173
8.4	Quantization in Curvilinear Coordinates	176
8.5	Biographical Notes	187
9.	Charged Particles in Magnetic Fields	189
9.1	Coupling to the Electromagnetic Field	189
9.2	The Hydrogen Atom	200
9.3	Three-Dimensional Electron Densities	206
9.4	The Spectrum of Hydrogen Atoms	207
9.5	Currents in the Hydrogen Atom	210
9.6	The Magnetic Moment	211
9.7	Hydrogen-like Atoms	213
9.8	Biographical Notes	225
10.	The Mathematical Foundations of Quantum Mechanics II	227
10.1	Representation Theory	227
10.2	Representation of Operators	230

10.3	The Eigenvalue Problem	238
10.4	Unitary Transformations	240
10.5	The S Matrix	241
10.6	The Schrödinger Equation in Matrix Form	243
10.7	The Schrödinger Representation	246
10.8	The Heisenberg Representation	246
10.9	The Interaction Representation	247
10.10	Biographical Notes	247
11.	Perturbation Theory	249
11.1	Stationary Perturbation Theory	249
11.2	Degeneracy	252
11.3	The Ritz Variational Method	266
11.4	Time-Dependent Perturbation Theory	269
11.5	Time-Independent Perturbation	273
11.6	Transitions Between Continuum States	275
11.7	Biographical Notes	297
12.	Spin	299
12.1	Doublet Splitting	300
12.2	The Einstein-de Haas Experiment	301
12.3	The Mathematical Description of Spin	302
12.4	Wave Functions with Spin	306
12.5	The Pauli Equation	308
12.6	Biographical Notes	320
13.	A Nonrelativistic Wave Equation with Spin	323
13.1	The Linearization of the Schrödinger Equation	323
13.2	Particles in an External Field and the Magnetic Moment ..	331
14.	Elementary Aspects of the Quantum-Mechanical Many-Body Problem	335
14.1	The Conservation of the Total Momentum of a Particle System	338
14.2	Centre-of-Mass Motion of a System of Particles in Quantum Mechanics	340
14.3	Conservation of Total Angular Momentum in a Quantum-Mechanical Many-Particle System	344
14.4	Small Oscillations in a Many-Particle System	356
14.5	Biographical Notes	366
15.	Identical Particles	367
15.1	The Pauli Principle	368
15.2	Exchange Degeneracy	369
15.3	The Slater Determinant	370
15.4	Biographical Notes	384

16. The Formal Framework of Quantum Mechanics	387
16.1 The Mathematical Foundation of Quantum Mechanics – Hilbert Space	387
16.2 Operators in Hilbert Space	389
16.3 Eigenvalues and Eigenvectors	391
16.4 Operators with Continuous or Discrete-Continuous (Mixed) Spectra	394
16.5 Operator Functions	395
16.6 Unitary Transformations	398
16.7 The Direct-Product Space	399
16.8 The Axioms of Quantum Mechanics	400
16.9 Free Particles	403
16.10 A Summary of Perturbation Theory	415
17. Conceptual and Philosophical Problems of Quantum Mechanics ..	419
17.1 Determinism	419
17.2 Locality	420
17.3 Hidden-Variable Theories	422
17.4 Bell's Theorem	425
17.5 Measurement Theory	428
17.6 Schrödinger's Cat	431
17.7 Subjective Theories	431
17.8 Classical Measurements	432
17.9 The Copenhagen Interpretation	432
17.10 Indelible Recording	433
17.11 The Splitting Universe	435
17.12 The Problem of Reality	436
Subject Index	439
