

## Table of Contents

### THE LAGRANGIAN FUNCTION OF AN INTENSE ELECTROMAGNETIC FIELD

V.I. Ritus

<b>Chapter 1: The Lagrangian Function of an Intense Electromagnetic Field and Quantum Electrodynamics at Short Distances</b>	1
1. Introduction	1
2. Calculation of the Lagrangian Function	4
3. Renormalization	9
4. The Asymptotic Properties and the Principle of Renormalization	13
5. The Lagrangian Function of an Electrical Field in Scalar Electrodynamics	18
<b>Chapter 2: The Relationship between Intense-Field Quantum Electrodynamics and Quantum Electrodynamics at Short Distances</b>	24
6. Introduction	24
7. The Lagrangian Function of an Intense Field from the Viewpoint of a Renormalization Group	27
8. A Comparison of Various Renorminvariant Charges in the Asymptotic Domain	30
9. Integral Transforms of Renorminvariant Charges	35
10. The Dispersion Representation for the Lagrangian Function of an Intense Field	37
<b>Chapter 3: The Virian Representation of the Imaginary Part of the Lagrangian Function of the Electromagnetic Field</b>	41
11. Introduction	41
12. The Proper-time Representation of the Imaginary Part of the Lagrangian Function	41
13. The Analytical Properties of Integrands	46
14. Calculation of Integrals and the Representation of $\text{Im}\mathcal{L}(2)$ as an Exponential Series	49
15. The Asymptotics of $\text{Im}\mathcal{L}(2)$ for a Weak Field	51
16. Interpretation	53
Appendix A	55
Appendix B	55
Appendix C	56
Bibliography	58

### ELECTRON MASS SHIFT IN AN INTENSE FIELD

V.I. Ritus

<b>Chapter 1: The Eigenfunction Method and the Mass Operator in Intense-Field Quantum Electrodynamics</b>	63
1. Introduction	64
2. Eigenfunctions of the Mass Operator	65
3. The Eigenfunctions of the Mass Operator in Scalar Electrodynamics	74
4. The Mass Operator and its Eigenvalue	74
5. The Elastic Scattering Amplitude	78
6. The Anomalous Electric Moment	80
7. The Anomalous Magnetic Moment	81
8. The Shift and Damping of the Ground State in an Electrical Field	83
9. The Classical Part of Mass Shift	87

<b>Chapter 2: The Mass Shift of an Accelerated Charge</b>	90
10. Two Methods of Calculating the Classical Mass Shift	90
11. The Change in Electron Self-Action Under Acceleration	92
12. The Conditions for Mass Shift and an Infrared Singularity in the Emission Spectrum	94
13. The Role of the Eigenfield Spin	96
14. Mass Shift with Random Charge Motion in an Electrical Field	98
15. The Mass Shift Determined by the Eigenfield State	100
16. The Density of Mass and Maxwellian Pressures of the Eigenfield	105
17. Oscillation in the Proper Mass of a Scalar Charge Under Acceleration	107
18. Mass Shift, Reactive Energy and Spectrum	110
<b>Chapter 3: The Variation in Mass of an Accelerated Charge as a Dynamical Manifestation of the Clock Paradox</b>	112
19. Introduction	112
20. Mass Shifts of Uniformly-Accelerated Sources of Massive Spin-One and -Zero Fields	115
21. Relation Between the Real and Imaginary Parts of the Variation in Self-Action	118
22. The Variation in Self-Action and the Clock Paradox	122
23. The $\Delta W(\mu_2)$ Function in Electrodynamics	125
<b>Chapter 4: The Manifestation of the Classical Mass Shift in Quantum Processes</b>	126
24. The Manifestation of Mass Shift of an Accelerated Charge in Electrical Field-Induced Pair Creation	127
25. The Mass Shift as an Integral Characteristic of the Field Distribution among Invariant Space-Time Regions	130
26. An Interpretation of Shift by a Uniformly-Accelerated Observer	133
27. The Topologic Properties of the Mass Shift	136
28. The Finiteness of the Variation in Euclidean Action; The Relation to the Topologic Invariant	138
29. The Behavior of the Mass Shift in a Strong Field; The Relation to Quantum Electrodynamics at Short Distances	140
Appendix A	144
Appendix B	147
Bibliography	148
<b>THREE—PHOTON INTERACTION IN AN INTENSE FIELD</b>	
V.O. Papanyan, V.I. Ritus	153
1. Introduction	154
2. The Kinematic Structure of the Polarization Operator of Three Photons	156
3. Vacuum Polarization and Photon Splitting	159
4. The Three-Photon Polarization Operator for Virtual Photons	165
5. Small Parameter Values	167
6. Scale Invariance	169
7. The Influence of Photon Mass on Splitting Probability	172
Appendix A	175
Appendix B	175
Bibliography	177
<b>RADIATIVE EFFECTS AND THEIR AMPLIFICATION IN AN INTENSE ELECTROMAGNETIC FIELD</b>	
V.I. Ritus	180
1. Introduction	180
2. Photon Mass in a Field	182
3. The Variation in Electron Mass in an Intense Field	184
4. Polarized Electron Emission	186
5. The Anomalous Magnetic Moment of an Electron in an Intense Field	190
6. The Direct Calculation of Radiative Effects	191
7. A Discussion of Second Order Radiative Corrections	192
8. The Expansion Parameter of Perturbation Theory with Respect to the Radiation Field	195
Bibliography	197

**THE S-MATRIX OF QUANTUM ELECTRODYNAMICS WITH A  
PAIR-CREATING EXTERNAL FIELD**

A.I. Nikishov

200

1. Introduction	200
2. The S-Matrix Ignoring the Emission Field	201
3. The S-Matrix Accounting for the Emission Field	207
4. Matrix Elements and Probabilities	210
Bibliography	224

**A PARTICLE IN A CONSTANT ELECTRICAL FIELD AND IN A PLANAR  
ELECTROMAGNETIC WAVE PROPAGATING ALONG THE FIELD**

N.B. Narozhny, A.I. Nikishov

226

1. Introduction	226
2. The Constant Electrical Field	227
2.1. Solutions with Different Quantum Numbers and Their Interrelationship	227
2.2. The Ritus Ep-Functions	238
2.3. The Propagator	241
3. The Constant Electrical Field and the Wave	245
3.1. Solutions of the Klein-Gordon equation	245
3.2. The Ep-functions and the Propagator	250
3.3 Pair Formation	251
4. The Spinor Particle	252
4.1. The Constant Electrical Field	252
4.2. The Constant Electrical Field and Wave	256
Bibliography	256

**$e^+e^-$ -PAIR PRODUCTION IN FAST MUON-ATOM COLLISION**

A.I. Nikishov, N.V. Pichkurov

259

1. Introduction	259
2. The Cross-Section of Pair Production by Two Fast Particles	261
2.1. The Differential and Total Pair Creation Cross-Sections From a Muon-Unscreened Nucleus Collision	261
2.2 Incorporating Screening	264
3. The Contribution to the Energy Spectrum of the $\gamma\gamma$ Diagram	266
3.1. A General Characterization of the Various Spectral Regions	266
3.2. The Low-Energy Portion of the Spectrum	267
3.3 The Moderate Energy Portion of the Spectrum	269
4. The Contribution of the $\gamma$ Diagrams to the Energy Spectrum	271
4.1. General Comments	271
4.2. A Lepton-Coulomb Center Collision	272
4.3. Accounting for Screening and the Elastic Form-Factor on the Nucleus	275
5. The Transfer Momentum Dependence of Muon-Induced $e^+e^-$ -Pair Production Cross-Section	280
5.1. Introduction Comments	280
5.2 Racah's Formula	281
5.3. The Energy Distributions of the Pair and the Transfer Momentum Distributions in the Ultrarelativistic Case	282
5.4 The Case of Small $t$	285
6. Accounting for the Coulomb Corrections in Pair Creation by a Fast Muon at the Nucleus	288
6.1. Formulation of the Problem	288
6.2. The Differential Cross-Section	289
6.3. Intregation of the Differential Cross-Section	291
Appendix A: A Comparison of Racah's Theory to Landau and Lifshitz Theory	295
Appendix B: Conversion of the Expression for $P_{\mu F \nu \mu \nu}$	296
Bibliography	297

**THE INFLUENCE OF LASER FIELD ON THE B-DECAYS OF NUCLEI AND OTHER  
PROCESSES OCCURRING IN ZERO-FIELD**

A.I. Nikishov, V.I. Ritus

	300
1. Introduction	301
2. The Probability of B-Decay in a Laser Field	302
3. Approximate Estimate of Field-Induced Change in Decay Probability	303
4. The Probability of B-Decay in a Weak Field When $\xi \gg 1$	306
5. The Probability of B-Decay in a Constant Field	315
6. The Decay Probability in a Weak With $\xi \gg 1$	317
7. The Interferential Effects with External Field Action on Processes Occurring in Zero Field	319
7.1. Obtaining the Transition Probability	319
7.2. A Slowly-Varying Field of Arbitrary Strength	321
7.3. A Medium or High Frequency Weak Field	322
7.4. A Low Frequency Weak Field	323
8. The Cessation of Oscillations of Interferential Terms for Selected Values of the Parameter	326
9. Conclusion	329
Addendum the Asymptotics of the Function $I_{\frac{1}{2}}(u)$ When $\nu \rightarrow -\infty$	329
Bibliography	339

**SUBJECT INDEX**
