PREFACE

vii

XI. EXACT PROPAGATORS AND VERTEX PARTS

§99. Field operators in the Heisenberg representation	377
§100. The exact photon propagator	380
§101. The self-energy function of the photon	386
§102. The exact electron propagator	389
§103. Vertex parts	393
§104. Dyson's equations	397
§105. Ward's identity	399
§106. Electron propagators in an external field	402
§107. Physical conditions for renormalisation	408
§108. Analytical properties of photon propagators	413
§109. Regularisation of Feynman integrals	417

XII. RADIATIVE CORRECTIONS

§110. Calculation of the polarisation operator	421
§111. Radiative corrections to Coulomb's law	424
§112. Calculation of the imaginary part of the polarisation operator from the Feynman integral	428
§113. Electromagnetic form factors of the electron	432
§114. Calculation of electron form factors	436
§115. Anomalous magnetic moment of the electron	440
§116. Calculation of the mass operator	443
§117. Emission of soft photons with non-zero mass	448
§118. Electron scattering in an external field in the second Born approximation	453
§119. Radiative corrections to electron scattering in an external field	458
§120. Radiative shift of atomic levels	462
§121. Radiative shift of mesic-atom levels	468
§122. The relativistic equation for bound states	470
§123. The double dispersion relation	476
§124. Photon-photon scattering	482
§125. Coherent scattering of a photon in the field of a nucleus	491
§126. Radiative corrections to the electromagnetic field equations	493
§127. Calculation of integrals over four-dimensional regions	501

XIII. ASYMPTOTIC FORMULAE OF QUANTUM ELECTRODYNAMICS

§128. Asymptotic form of the photon propagator for large momenta	505
§129. Separation of the double-logarithmic terms in the vertex operator	511
§130. Double-logarithmic asymptotic form of the vertex operator	516
§131. Double-logarithmic asymptotic form of the electron–muon scattering amplitude	519

XIV. DYNAMIC SYMMETRY OF HADRONS

§132. Isomultiplets	526
§133. Hypercharge	529
§134. Metastable hadrons	531
§135. G parity	536
§136. $SU(3)$ unitary symmetry	537
§137. Supermultiplets	542
§138. Superspinor operators	547

XV. ELECTRODYNAMICS OF HADRONS

§139. Electromagnetic form factors of hadrons	550
§140. Electron–hadron scattering	555
§141. The low-energy theorem for bremsstrahlung	558
§142. The low-energy theorem for photon–hadron scattering	562
§143. Multipole moments of hadrons	564
§144. Isotopic properties of hadron electromagnetic form factors	569

XVI. WEAK INTERACTIONS

§145. Weak interactions of leptons	571
§146. Muon decay	576
§147. Radiative corrections to muon decay	580
§148. Kinematic structure of the hadron weak current	584
§149. Realness of form factors	589
§150. Isotopic properties of the hadron weak current	592
§151. Neutron beta decay	595
§152. Transition currents in the supermultiplet	599
§153. Kinematic structure of the non-leptonic decay amplitudes	602
§154. Neutral kaons	605

ADDENDUM TO PART 1

§82a. Ionisation losses of fast particles	608
