

CONTENTS

I	INTEGRAL QUANTUM MECHANICS AND SCATTERING	1
1.	Continuum Quantum Mechanics	3
1.A	The Scattering Experiment, 3	
1.A.1	Time-dependent Approach, 5	
1.A.2	Time-independent Trick, 6	
1.B	The 1- and 2-Body Schrödinger Equations, 8	
1.C	Coordinate Systems and Elastic Scattering, 10	
1.C.1	Elastic Kinematics, 13	
1.D	The Particle and Channel Concepts, 15	
	Problems, 16	
2.	Currents and Cross Sections	18
2.A	Elastic Scattering Currents, 18	
2.B	Differential Cross Sections, 19	
2.B.1	Nonelastic Cross Sections, 21	
2.C	Total Cross Section, 21	
2.D	The Optical Theorem, 23	
	Problems, 28	
3.	Partial-Wave Functions and Expansions	30
3.A	Shifted Waves, 30	
3.A.1	Plane Waves, 31	

- 3.A.2 Distorted Waves, 33
- 3.A.3 Phase Shifts, 34
- 3.A.4 Incoming and Outgoing Waves, 38
- 3.A.5 Elastic Waves with Absorption, 39
- 3.B Partial-Wave Amplitudes, 40
 - 3.B.1 Differential Cross Section, 41
 - 3.B.2 Total Cross Sections, 43
- 3.C Actually Solving Schrödinger's Equation, 44
 - 3.C.1 Just for Scattering, 46
 - 3.C.2 Bound-State Connection, 46
- Problems, 47

4. Scattering Applications: Lengths, Resonances, Coulomb 50

- 4.A The Low-Energy Limit, 50
 - 4.A.1 Scattering Length, 51
 - 4.A.2 Low-Energy Wave Function, 52
 - 4.A.3 Relation to Bound States, 56
- 4.B Resonances, 58
 - 4.B.1 Breit–Wigners, 58
 - 4.B.2 Complex Energy States and Exponential Decay, 65
- 4.C Coulomb Scattering; A Bad Example, 68
 - 4.C.1 Pure Coulomb Scattering, 68
 - 4.C.2 Shielded Coulomb Potential, 71
 - 4.C.3 Coulomb Plus Short-Range Potentials, 74
- Problems, 75

5. Green's Functions and Integral Schrödinger Theory 80

- 5.A Definition of Green's Function, 81
- 5.B Solution via Eigenfunction Expansion, 82
- 5.C Solution via Spectral Representation, 83
 - 5.C.1 Evaluation of G_E with Residues, 84
 - 5.C.2 Other Boundary Conditions, 87
- 5.D Lippmann–Schwinger Wave Equation, 88
 - 5.D.1 Integral Expression for f , 89
- 5.E Born Approximation; The Neumann Series, 90
 - 5.E.1 Application to Yukawa and Coulomb Potentials, 92
- 5.F Born Approximation for Scattering from Bound Systems, 94
- Problems, 98

6. The Transition and Potential Matrices	102
6.A T - and V -Matrix Elements, 102	
6.B Lippmann–Schwinger Equation for T , 104	
6.B.1 Easy Derivation of Born Series, 105	
6.C Off the Energy Shell, 106	
6.C.1 Example: Off-Shell T , 107	
Problems, 109	
7. Formal Quantum Mechanics	113
7.A Operator Form of Schrödinger’s Equation, 113	
7.B Operator Form of the Lippman–Schwinger Wave Equation, 115	
7.B.1 Momentum Space LS Wave Equation, 116	
7.B.2 Other Operator Forms, 117	
7.C Proof of Orthogonality, 118	
7.D Operator Equation for T , 119	
7.E The Bound-State Connection, 121	
7.F Unitarity of T and the Optical Theorem, 122	
7.G Reaction and Scattering Matrices R and S , 124	
7.H The Two-Potential Formula, Tutorial, 126	
Problems, 127	
8. Integral Schrödinger Theory in the $klm\rangle$ Basis	130
8.A Partial-Wave Green’s Function, 130	
8.B The u_l Equation, 132	
8.C The T_l Equation, 133	
8.D Energy–Angular Momentum Representation $ klm\rangle$, 134	
8.D.1 Half-Off-Shell T_l for Square Well, 140	
8.D.2 Born Approximation for T_b , 142	
8.E Optical Theorem, 142	
8.E.1 On-Shell R_l and T_b , 143	
8.F Born Series for Wave Function, 144	
Problems, 145	
9. Spin Theory	147
9.A Basic Description of Spin, 147	
9.A.1 Definition, 147	

- 9.A.2 Mathematical Description, 148
- 9.A.3 Polarized Beams, 152
- 9.B Schrödinger Equation for Spin Orbit Potential, 155
 - 9.B.1 Wave Function Expansion, 156
 - 9.B.2 Solution, 159
 - 9.B.3 Momentum Space $0 \otimes \frac{1}{2}$, 162
- Problems, 163

10. Spin Phenomenology and Identical Particles 166

- 10.A \mathcal{F} as a Matrix in Spin Space, 166
- 10.B Observables, 167
 - 10.B.1 Cross Sections, 168
 - 10.B.2 Polarization, 171
 - 10.B.3 Polarization Analysis, 172
- 10.C Extensions for Identical Particles, 175
 - 10.C.1 Boson–Boson, 177
 - 10.C.2 Fermion–Fermion, 179
- Problems, 180

11. Many-Body Problems 183

- 11.A General Ideas, 183
- 11.B Hartree Approximation, 185
- 11.C Correlations and Determinantal Wave Functions, 186
 - 11.C.1 Correlation Function, 188
- 11.D Hartree–Fock Equations, 190
- Problems, 195

12. Statistical Help with Many-Body Problems 198

- 12.A Thomas–Fermi Theory, 199
 - 12.A.1 Solutions, 202
- 12.B Thomas–Fermi–Dirac Equation, 204
- 12.C Density Functional Theory, 205
- 12.D Bethe–Goldstone Equation, 208
 - 12.D.1 Fermion Matter, 211
 - 12.D.2 Energy of Nuclear Matter, 212
- Problems, 214

II	RELATIVISTIC QUANTUM MECHANICS	217
13.	Relativistic Wave Equations for Spinless Particles	219
13.A	Canons, 220	
13.B	Relativistic Schrödinger, 221	
13.C	Relativistic Lippmann–Schwinger, 222	
13.D	Klein–Gordon for Free Particles, 222	
13.D.1	Properties, 223	
13.D.2	Probability and Current, 225	
13.E	Interactions and the KGE, 227	
13.E.1	Minimal Electromagnetic Coupling, 227	
13.E.2	Positive- and Negative-Energy Degrees of Freedom, 230	
13.E.3	Relation to Schrödinger Equation, 230	
13.E.4	An Atomic Solution, 231	
13.E.5	A Paradoxical Solution, 232	
	Problems, 237	
14.	Dirac Equation	240
14.A	Derivation, α and β Matrices, 241	
14.B	At-Rest Solutions, 244	
14.C	Covariant Form, γ Matrices, 245	
14.C.1	Standard γ Representation, 246	
14.C.2	All Possible 4×4 Matrices, 247	
14.D	Probability and Current, 247	
14.E	Lorentz Transformation of Wave Functions, 249	
14.E.1	Requirement on Dirac Equation, 249	
14.E.2	The Transformation Operator, 250	
14.E.3	Bilinear Covariants, 253	
14.E.4	Including Parity, 254	
	Problems, 255	
15.	Components of Dirac Wave Functions	257
15.A	Holes in the Sea, 257	
15.B	Plane Waves, 261	
15.B.1	Properties of Plane-Wave Spinors, 263	
15.B.2	Projection Operators, 265	
15.C	Expansions in Plane Waves, 266	

15.D	Gordon Decomposition of Current: Tutorial, 266	
15.E	Interactions and the Dirac Equation, 268	
15.E.1	The Upper and Lower Split, 268	
15.E.2	Nonrelativistic Limit, the Electron's Structure, 269	
15.F	Mass-Zero Dirac Equation: Tutorial, 273	
	Problems, 274	
16.	Interactions in Dirac Theory	277
16.A	Central-Force Problem, 277	
16.A.1	Constants of Motion, 278	
16.A.2	Form of Wave Function, 278	
16.A.3	Coupled Radial Equations, 280	
16.B	Hydrogen Atom, 283	
16.B.1	Eigenenergy, 285	
16.C	General Force Problem, 288	
16.C.1	Equivalent Schrödinger Potential, 289	
	Problems, 291	
17.	Integral Forms of the Dirac Equation, Scattering	293
17.A	Distorted and Plane Waves, 293	
17.A.1	Asymptotic States, 294	
17.A.2	Spin Scattering, 296	
17.B	Coulomb Scattering, 296	
17.C	Momentum Space Equation, 297	
17.C.1	Partial Waves, 298	
17.C.2	Internal Negative-Energy States, 299	
17.D	Integral Forms of Dirac Equation, 302	
17.D.1	Basis States, 302	
17.D.2	Green's Function, 302	
17.D.3	Equation for Ψ , 303	
17.D.4	Integral Equation for T , 304	
17.D.5	Energy Decomposition, 305	
	Problems, 306	
18.	Applications: Solving Even Relativistic Integral Equations	309
18.A	Principal Value and $i\epsilon$ Integrals, 309	
18.B	Numerical Integration, 312	

- 18.C Reduction of Lippmann–Schwinger Equations to Linear Equations, 313
 - 18.C.1 Solution for T Matrix, 315
- 18.D Relation to Formal Theory and Bound States, 315
- 18.E Relativistic Generalizations, 316
 - 18.E.1 Relativistic Schrödinger Equation, 317
 - 18.E.2 Relativistic Schrödinger Bound States, 318
 - 18.E.3 Klein–Gordon Equation, 318
 - 18.E.4 Dirac Equation, 319
- 18.F Bound States in P Space with Coulomb-like Forces, 319
- Problems, 321

III QUANTUM FIELDS 323

19. Second Quantization 325

- 19.A Occupation Number Space, 325
 - 19.A.1 Construction of States, 327
- 19.B Second Quantized Operators, 330
 - 19.B.1 Field Operator, 331
 - 19.B.2 Dynamical Operators, 332
- 19.C Time Dependence, 333
 - 19.C.1 Heisenberg Picture in Fock Space, 335
- Problems, 336

20. Quantized Electromagnetic Fields 338

- 20.A Classical Electromagnetic Fields: Review, 338
- 20.B The Photon State Vector, 341
- 20.C Electron–Photon Interaction, 342
 - 20.C.1 Interaction Hamiltonian, 343
- 20.D Following the Golden Rule, 344
 - 20.D.1 Decaying State, 345
- 20.E Radiation from Two-Level System, 346
 - 20.E.1 Dipole Approximation, 348
 - 20.E.2 Transition Rate, 350
 - 20.E.3 Light Absorption, Planck’s Law, 352
- Problems, 355

21. Applications of Nonrelativistic QED	358
21.A Light Scattering from Electrons, 358	
21.A.1 Classical: Rayleigh, Thompson, and Compton, 358	
21.A.2 Quantum Photon–Electron Scattering, 361	
21.B Coherent States of the Radiation Field: Tutorial, 370	
21.B.1 Nonclassical Aspects of Fock States, 371	
21.B.2 Construction of Coherent States, 371	
21.C Self-Energies and Their Handling, 373	
21.C.1 Classical, 374	
21.C.2 Quantum, 375	
21.C.3 Mass Renormalization, Free e , 376	
21.C.4 Mass Renormalization, Bound e (Lamb Shift), 377	
Problems, 380	
22. Interaction of Photons with Quantized Matter, QED	382
22.A Quantized Holes and Particles, 382	
22.A.1 Hole Picture, 383	
22.B The Interaction Hamiltonian, 387	
22.B.1 Longitudinal and Timelike Photons, 392	
22.C A Sample: Relativistic Compton Scattering, 394	
22.C.1 Setup, 394	
22.C.2 Second-Order Matrix Elements, 397	
22.C.3 Tricks, 398	
22.C.4 Extracting Cross Sections, 399	
Problems, 400	
23. Potentials from Field Theory	402
23.A Relating Field Theory and Potential Amplitudes, 402	
23.A.1 One-Body Interactions, 403	
23.A.2 Two-Body Interactions, 404	
23.B The Electron–Electron Interaction and the Photon’s Mass, 405	
23.B.1 The Coulomb Interaction: An Approximation, 408	
23.B.2 The Breit Interaction: An Improvement, 409	
23.C One-Boson-Exchange Potentials, 411	
23.C.1 Meson Origin of the Nuclear Force, 411	
23.C.2 Coupling of Fields, 412	
Problems, 416	

24. Applications: Phonon Fields, Weak Fields	418
24.A Phonons, 418	
24.A.1 Classical One-Dimensional Vibrations, 419	
24.A.2 Quantized One-Dimensional Vibrations, 420	
24.A.3 Three-Dimensional Phonons, 423	
24.B Electron–Phonon Interactions, 425	
24.C The Weak Force, 426	
24.C.1 Historical Puzzle, 427	
24.C.2 Form of the Weak Hamiltonian, 427	
24.C.3 Beta Decay Spectrum, 432	
Problems, 436	
25. Wave Equations from Field Theory	438
25.A Bethe–Salpeter Equation, 438	
25.A.1 Deduction, 439	
25.A.2 In Coordinate Space, 441	
25.A.3 In Momentum Space, 444	
25.A.4 Properties, 447	
25.B Blankenbecler–Sugar Equation, 447	
Problems, 450	
Appendix A Natural Units and Plane Waves	451
A.1 Natural Units, 451	
A.2 Plane Waves in Little and Big Boxes, 452	
A.2.a Little Boxes, 453	
A.2.b The Big Box, 454	
Appendix B Dirac Notation and Representations	456
B.1 Dirac Notation, 456	
B.2 Explicit Representations, 458	
B.2.a Coordinate Space $ \mathbf{r}\rangle$, 458	
B.2.b Momentum Space $ \mathbf{k}\rangle$, 458	
B.2.c Energy and Angular Momentum $ klm\rangle$, 460	
Appendix C Four-Vectors and Lorentz Transformations	463
Appendix D The Dirac Equation	467
References	471
Index	477
