Preface	xi
1 PHOTONS AND THE ELECTROMAGNETIC FIELD	1
1.1 Particles and fields	1
1.2 The electromagnetic field in the absence of charges	2
1.2.1 The classical field	2
1.2.2 Harmonic oscillator	6
1.2.3 The quantized radiation field	7
1.3 The electric dipole interaction	10
1.4 The electromagnetic field in the presence of charges	15
1.4.1 Classical electrodynamics	16
1.4.2 Quantum electrodynamics	18
1.4.3 Radiative transitions in atoms	19
1.4.4 Thomson scattering	20
1.5 Appendix: The Schrödinger, Heisenberg and interaction pictures	22
Problems	24
2 LAGRANGIAN FIELD THEORY	27
2.1 Relativistic notation	28
2.2 Classical Lagrangian field theory	29
2.3 Quantized Lagrangian field theory	32
2.4 Symmetries and conservation laws	33
Problems	40

3	THE KLEIN–GORDON FIELD	43
3.1	The real Klein–Gordon field	43
3.2	The complex Klein–Gordon field	47
3.3	Covariant commutation relations.	50
3.4	The meson propagator.	53
	Problems	58
4	THE DIRAC FIELD	61
4.1	The number representation for fermions	61
4.2	The Dirac equation	63
4.3	Second quantization	67
4.4	The fermion propagator	73
4.5	The electromagnetic interaction and gauge invariance.	77
	Problems	79
5	PHOTONS: COVARIANT THEORY	81
5.1	The classical fields	82
5.2	Covariant quantization	86
5.3	The photon propagator	90
	Problems	93
6	THE S-MATRIX EXPANSION	95
6.1	Natural dimensions and units	96
6.2	The S -matrix expansion	98
6.3	Wick’s theorem	102
7	FEYNMAN DIAGRAMS AND RULES IN QED	107
7.1	Feynman diagrams in configuration space	108
7.2	Feynman diagrams in momentum space	119
7.2.1	The first-order terms $S^{(1)}$	121
7.2.2	Compton scattering	122
7.2.3	Electron–electron scattering	125
7.2.4	Closed loops	127
7.3	Feynman rules for QED	128
7.4	Leptons	131
	Problems	135
8	QED PROCESSES IN LOWEST ORDER	137
8.1	The cross-section	138
8.2	Spin sums	141

8.3	Photon polarization sums	144
8.4	Lepton pair production in (e^+e^-) collisions.	146
8.5	Bhabha scattering.	150
8.6	Compton scattering	153
8.7	Scattering by an external field	159
8.8	Bremsstrahlung	165
8.9	The infra-red divergence	168
	Problems	171
9	RADIATIVE CORRECTIONS	175
9.1	The second-order radiative corrections of QED	176
9.2	The photon self-energy.	182
9.3	The electron self-energy	187
9.4	External line renormalization	192
9.5	The vertex modification	194
9.6	Applications.	199
	9.6.1 The anomalous magnetic moments	200
	9.6.2 The Lamb shift	203
9.7	The infra-red divergence	208
9.8	Higher-order radiative corrections: renormalizability	211
	Problems	219
10	REGULARIZATION	221
10.1	Mathematical preliminaries	222
	10.1.1 Some standard integrals.	222
	10.1.2 Feynman parameterization	223
10.2	Cut-off regularization: the electron mass shift	225
10.3	Dimensional regularization.	226
	10.3.1 Introduction	226
	10.3.2 General results	227
10.4	Vacuum polarization	229
10.5	The anomalous magnetic moment	231
	Problems	234
11	WEAK INTERACTIONS	235
11.1	Introduction	235
11.2	Leptonic weak interactions.	236
11.3	The free vector boson field.	242
11.4	The Feynman rules for the IVB theory	244
11.5	Decay rates.	245

11.6	Applications of the IVB theory	246
11.6.1	Muon decay	247
11.6.2	Neutrino scattering	253
11.6.3	The leptonic decay of the W boson	254
11.7	Difficulties with the IVB theory	255
	Problems	259
12	A GAUGE THEORY OF WEAK INTERACTIONS	261
12.1	The simplest gauge theory: QED	262
12.2	Global phase transformations and conserved weak currents	263
12.3	The gauge-invariant electro-weak interaction	268
12.4	Properties of the gauge bosons	272
12.5	Lepton and gauge boson masses	275
12.6	Appendix: Two gauge transformation results	275
12.6.1	The transformation law (12.32b)	276
12.6.2	The SU(2) gauge invariance of Eq. (12.57)	277
13	SPONTANEOUS SYMMETRY BREAKING	279
13.1	The Goldstone model.	280
13.2	The Higgs model	284
13.3	The standard electro-weak theory	289
14	THE STANDARD ELECTRO-WEAK THEORY	297
14.1	The Lagrangian density in the unitary gauge	298
14.2	Feynman rules	303
14.3	Elastic neutrino-electron scattering	311
14.4	Electron-positron annihilation	315
14.5	The Higgs boson	322
	Problems	325
	APPENDIX A THE DIRAC EQUATION	327
A.1	The Dirac equation	327
A.2	Contraction identities	329
A.3	Traces	329
A.4	Plane wave solutions	331
A.5	Energy projection operators	332
A.6	Helicity and spin projection operators.	333
A.7	Relativistic properties	334
A.8	Particular representations of the γ -matrices.	336
	Problems	339

APPENDIX B FEYNMAN RULES AND FORMULAE FOR PERTURBATION THEORY	341
INDEX	351
