

# CONTENTS

<b>Preface</b>	<b>v</b>
<b>Introduction</b>	<b>ix</b>
<b>1 Review of Quantum Mechanics</b>	<b>1</b>
<b>1.1 Hamiltonian Mechanics</b>	<b>1</b>
<i>Formulation of Hamiltonian Mechanics / The Poisson Bracket / A Simple Example / Charged Particle in an Electromagnetic Field</i>	
<b>1.2 Operators and State Vectors</b>	<b>9</b>
<i>Quantum-Mechanical Operators / Bra and Ket Vectors / Eigenvectors and Eigenvalues / Series Expansion of State Vectors / The Identity Operator Expressed by Eigenvectors / Representations of Vectors and Operators / Various Types of Operators</i>	
<b>1.3 Quantization Rules</b>	<b>25</b>
<i>The Quantum Postulates / The Heisenberg and Schrödinger Equations / The Interaction Picture / The Schrödinger Representation / The Free Electron — An Example / Momentum Representation / Commuting Operators and the Measurement Process / The Uncertainty Principle</i>	
	<b>xi</b>

**xii** Contents

1.4	The Harmonic Oscillator	44
	<i>Energy Eigenvalue Equation / Solution of the Eigenvalue Equation / Creation and Destruction Operators / Uncertainty Products</i>	
	Problems	51
<b>2</b>	<b>Field Quantization</b>	<b>53</b>
2.1	Introduction	53
2.2	Quantization of an <i>LC</i> Circuit	55
	<i>Current and Voltage Operators / Interaction Hamiltonian</i>	
2.3	Quantization of Transverse Electromagnetic Fields	58
	<i>Normal Mode Expansion of the Field / Field Quantization / Traveling Wave Representation of the Field</i>	
2.4	The Photon	69
	<i>The Photoelectric Effect / Eigenvectors and Eigenvalues of the Electromagnetic Field / Superposition States of the Electromagnetic Field / Uncertainty of Photon Number and Phase / Photon Momentum / Zero-Point Energy of the Field</i>	
2.5	Phonons of a Linear Lattice Model	82
	<i>The Hamiltonian of the Linear Lattice / Transformation to Normal Modes of Vibration / Brillouin Zones</i>	
2.6	Phonons of the Three-Dimensional Lattice	90
	<i>Hamiltonian of the Three-Dimensional Lattice / Discrete Fourier Transformation / Normal Modes of Vibration of Each Crystal Cell / <math>\omega</math>-<math>\beta</math> Diagrams</i>	
	Problems	99
<b>3</b>	<b>Interaction Between Fields and Charges</b>	<b>101</b>
3.1	Interacting Systems	101
	<i>The Scattering Operator / Transition Probability / Interaction Hamiltonian for an Electron in a Field</i>	
3.2	The Quantized Field Excited by a Classical Current	110
	<i>Hamiltonian of the Problem / Solution of the Schrödinger Equation / The Field of an Infinitely Thin Current Sheet / Solution in the Heisenberg Picture</i>	
	Problems	123

<b>4</b>	<b>Photon Emission by “Free” Electrons</b>	<b>125</b>
4.1	Introduction	125
4.2	Transit Time <i>LC</i> Oscillator, Quantum-Mechanical Treatment	127
	<i>System Hamiltonian, Initial and Final States / Density of Electron States / Stimulated and Spontaneous Emission</i>	
4.3	Transit Time <i>LC</i> Oscillator, Classical Treatment	135
	<i>Power Exchange Between One Electron and the Field / Extension to a Continuous Electron Stream</i>	
4.4	Discussion of the Transit Time <i>LC</i> Oscillator	137
	<i>The Oscillation Threshold Condition / Comparison of the Classical and Quantum Theory / Discussion of Higher-Order Approximations / Graphical Representation of Perturbation Theory</i>	
4.5	Stimulated Emission of Bremsstrahlung	145
	<i>Introduction / Mathematical Formulation of the Problem / Derivation of the Photon Emission Probability / Some Tedious Mathematics / Discussion of Stimulated Emission of Bremsstrahlung</i>	
4.6	Čerenkov Radiation	163
	<i>What is Čerenkov Radiation? / Interaction Hamiltonian for Relativistic Electrons / Derivation of the Photon Emission Probability / The Density of Photon States / The Power Emitted by Čerenkov Radiation</i>	
	Problems	173
<b>5</b>	<b>Interaction of Bound Electrons with Radiation</b>	<b>177</b>
5.1	Spontaneous and Stimulated Emission and Absorption by Bound Electrons	177
	<i>Transition Probability / Dipole Radiation / The Dipole Moment Matrix Element / Power Emitted by Spontaneous Emission / Radiation Lifetime / Discussion of Spontaneous and Stimulated Emission</i>	
5.2	A Simple, One-Dimensional Maser Model	187
	<i>What is a Maser? / Maser or Laser Gain Factor / Oscillation Condition of a Cavity Maser / Gain of a Traveling Wave Maser / Noise Output of a Traveling Wave Maser / General Discussion of Masers and Lasers</i>	

**xiv** Contents

<b>5.3</b>	The Natural Linewidth <i>Order of Magnitude Estimates / The Wigner-Weisskopf Method</i>	197
<b>5.4</b>	Interference of the Light of Two Independent Lasers <i>Can Photons from Two Lasers Interfere? / Ionization Probability of an Atom in the Field of Two Lasers / Spatial Interference Pattern / Beat Frequencies, Photodetector / Polarization Dependence of the Photocurrent</i>	204
<b>5.5</b>	The Doppler Effect <i>Field Representation / Doppler Effect: First Treatment / Doppler Effect: Second Treatment</i>	218
	Problems	222
<b>6</b>	<b>Noise and Counting Statistics</b>	<b>225</b>
<b>6.1</b>	Introduction	225
<b>6.2</b>	Thermal Noise <i>Boltzmann Statistics Applied to Radiation Modes / The Thermal Noise Power / The Noise Formula Derived from Laser Noise</i>	227
<b>6.3</b>	Quantum Noise <i>Uncertainty of Field Measurements / Equivalent Quantum Noise of a Homodyne Detector / Quantum Noise of Linear Detectors</i>	232
<b>6.4</b>	Shot Noise <i>Fourier Series Expansion of the Electron Current / The Mean-Square Fluctuations of the Electron Current</i>	239
<b>6.5</b>	Noise Performance of Light Detectors <i>Signal-to-Shot-Noise Ratios / Detector Performance and Radiation Modes</i>	242
<b>6.6</b>	Noise Performance of Light Amplifiers <i>Amplifier Noise Factor / Fundamental Amplifier Noise Limit / Noise Factor of Two Amplifiers in Tandem / Discussion of Amplifier Noise Performance</i>	251
<b>6.7</b>	The Poisson Distribution <i>Probability per Unit Time / The Binomial Probability Distribution / Transition to the Poisson Distribution</i>	256
<b>6.8</b>	Photon Counting Statistics <i>Introduction / Counting Statistics of a Pure Sine Wave / Counting Statistics of Thermal Radiation</i>	259
	Problems	269

<b>7</b>	<b>The Density Matrix Method</b>	<b>271</b>
7.1	Definition of the Density Matrix <i>Quantum Statistics / The Density Operator / Time Dependence of the Density Operator</i>	271
7.2	Properties of the Density Matrix <i>Physical Interpretation of the Diagonal Elements / Initial Conditions for the Matrix Elements / How to Use the Density Matrix</i>	274
7.3	Laser Treated by Means of the Density Matrix <i>Derivation of the Inhomogeneous Wave Equation / Equation of Motion of the Density Matrix / The Polarization Vector / Small-Signal Theory / A Cavity Laser</i>	276
7.4	Laser Saturation	293
7.5	Nonlinear Effects Treated with the Help of the Density Matrix <i>Equation of Motion in the Interaction Picture / Perturbation Solution of the Equation of Motion</i>	296
7.6	Second Harmonic Generation <i>Introduction / Polarization Vector at Twice the Frequency / The Polarization Vector at the Fundamental Frequency / Local Fields and Dielectric Constant / Dependence of Second Harmonic Generation on Crystal Symmetry / Phase Matching Condition / Coupled Wave Equations / Build Up of Second Harmonic Power / Degenerate Parametric Amplifier / Exact Solution for Second Harmonic Generation</i>	298
7.7	Parametric Up- and Down-Conversion and Amplification <i>Polarization at the Sum and Difference Frequencies / The Coupled Wave Equation / Parametric Up- and Down-Converter / Parametric Amplifier / The Electro-Optic Effect</i>	316
7.8	Raman Effect <i>What is the Raman Effect? / Polarization Vector at the Raman Frequency / Electronic and Vibrational Transitions / Gain at the Stokes Frequencies / Coupled Wave Equations / Simplified Treatment of the Raman Effect</i>	332
	Problems	347

<b>8</b>	<b>Multiple-Photon Processes</b>	<b>351</b>
8.1	Introduction <i>Definition of Multiple-Photon Processes / Order of Magnitude Estimates of Perturbation Theory</i>	351
8.2	Emission and Absorption of More Than One Photon <i>Second-Order Perturbation Theory / Two-Photon Absorption Probability</i>	353
8.3	Rayleigh Scattering <i>Photon Scattering Theory / Coherence of the Scattering Process / Scattering by Randomly Positioned Atoms / Transformation of the Equations to a More Convenient Form / Index of Refraction / Isotropy of the Scattering Medium / The Rayleigh Scattering Formula / Graphic Representation of Rayleigh Scattering</i>	358
8.4	Raman Scattering <i>Introduction / The Matrix Elements of the Raman Scattering Theory / Can Two Molecules Take Part in Raman Scattering? / Transition Probability / Spontaneous Raman Scattering / Stimulated Raman Scattering / Gain at Stokes, Loss at Anti-Stokes Frequencies</i>	372
8.5	A Different Approach to the Raman Effect <i>Separation of Nuclear Vibrations and Electron Motion / Third-Order Perturbation Theory / Selection Rules</i>	385
8.6	The Raman Effect in Crystals <i>The Hamiltonian of the Problem / Discussion of the <math>A^2</math> Term / Transition Probability / Evaluation of the Matrix Elements / Phase Matching Condition / The Matrix Element <math>K_{11}</math> / Higher-Order Raman Effect</i>	390
8.7	Discussion of the Raman Effect in Crystals <i>Considerations Concerning the Phonon Propagating Constant / Consequences of the Phase Matching Condition / Polaritons</i>	406
8.8	Brillouin Scattering <i>Acoustical Phonons / Frequency Dependence of Brillouin Scattering / Light Scattering by Sound Waves / Stimulated Brillouin Scattering</i>	413
8.9	Parametric Processes <i>Phase Matching Condition / Limitations on the Use of Energy Eigenstates / Manley-Rowe Relations</i>	418
	Problems	420

<b>9</b>	<b>Losses in Quantum Electronics</b>	<b>423</b>
9.1	Loss Description in Classical and Quantum Mechanics <i>The Damped Harmonic Oscillator / Hamiltonian of a Damped Oscillator</i>	423
9.2	Modes in a Lossy Cavity <i>The Hamiltonian of the System / The Equations of Motion / Solution of the Equations of Motion / Discussion of the Solution</i>	426
9.3	Propagation of Modes in a Lossy Waveguide <i>Transition from Cavity Modes to Waveguide Modes / Solution of Eq. (9.3–9) by Contour Integration</i>	439
9.4	Thermal Noise and the Loss Model <i>Density Matrix of the “Loss Oscillators” / Average Energy of the Cavity Modes</i>	444
	Problems	447
