

CONTENTS

| | |
|--|------------|
| EDITOR'S FOREWORD | vii |
| PREFACE | ix |
| 1 Dimensional and "Model" Approximations | 1 |
| 1.1 Order-of-Magnitude Estimation of Mathematical Expressions | 2 |
| 1.2 Analytic Properties of Physical Quantities | 17 |
| 1.3 Estimates in Atomic Physics | 25 |
| 1.4 Estimates in Quantum Electrodynamics | 43 |
| 2 Various Types of Perturbation Theory | 60 |
| 2.1 Perturbation Theory in the Continuous Spectrum. Scattering of Charged Particles by Nuclei | 60 |
| 2.2 Perturbation of the Boundary Conditions. The Energy Levels of a Deformed Nucleus | 68 |
| 2.3 Sudden Perturbations. Ionization in β Decay and in Nuclear Collisions | 71 |
| 2.4 Adiabatic Perturbations | 81 |
| 2.5 Fast and Slow Subsystems | 88 |
| 2.6 Perturbation Theory for Adjacent Levels | 104 |
| 3 The Quasiclassical Approximation | 111 |
| 3.1 The One-Dimensional Problem | 111 |
| 3.2 The Three-Dimensional Problem | 129 |
| INDEX | |
