

Contents

Prologue The Beginnings of Chemical Physics Professor A. J. B. Robertson, King's College, London	1
1 The Beginnings of Wave Mechanics Professor Louis de Broglie, Académie des Sciences, Paris	12
2 The Development of Quantum Mechanics in the Period 1924–1926 Professor J. C. Slater, University of Florida	19
3 Central Fields in Two Vis-à-Vis Three Dimensions: An Historical Divertissement Professor J. H. Van Vleck, Harvard University	26
4 Mathematical Foundations of a Quantum Theory of Valence Concept Dr. K. R. Roby, Australian National University	38
5 The Localisation of Electrons and the Concept of the Chemical Bond Professor R. Daudel, Centre de Mécanique Ondulatoire Appliquée, Paris	61
6 The Wave Mechanical Treatment of Hydrogen Bonded Systems Professor M. A. Ratner, New York University, and Professor J. R. Sabin, University of Florida	72

7 Hybrid Bond Orbitals	88
Professor L. Pauling and Dr. I. Keaveny, Stanford University	
8 Application of Wave Mechanics to the Electronic Structure of Molecules through Configuration Interaction	99
Dr. P. S. Bagus, Dr. B. Liu, Dr. A. D. McLean and Dr. M. Yoshimine, IBM, San Jose, California	
9 Spin and the Pauli Principle	119
Dr. A. T. Amos, University of Nottingham	
10 Time-dependent Hartree–Fock Theory and its Application to Calculations of Atomic Properties	133
Dr. M. J. Jamieson, University of Exeter	
11 Influence of Wave Mechanics on Inorganic Chemistry	160
Dr. D. S. Urch, Queen Mary College, London	
12 Ligand Fields—Some Recent Symmetry Developments	174
Dr. C. E. Schäffer, University of Copenhagen	
13 A Group-theoretic View of Weakly Interacting Sites	193
Dr. D. J. Klein, University of Texas	
14 The Role of Symmetry and Spin Restrictions in Reactive and Non-reactive Collisions and Molecular Decompositions	208
Dr. J. J. Kaufman, The John Hopkins University	
15 The Role of Semi-empirical SCF MO Methods	239
Professor M. J. S. Dewar, University of Texas at Austin	
16 The Influence of Wave Mechanics on Organic Chemistry	255
Professor C. A. Coulson, University of Oxford	
17 Quantum Biochemistry	272
Professor A. Pullman and Professor B. Pullman, Institut de Biologie Physico-Chimique, Paris	

18 Application of Wave Mechanics to the Study of Natural Optical Activity in Organic Molecules	292
Dr. R. Geiger and Professor Dr. G. Wagnière, University of Zurich	
19 Photoelectron Spectroscopy and the Electronic Structure of Matter	315
Professor W. C. Price, King's College, London	
20 Determination of the Electronic Structures of Complex Molecules and Solids by the SCF-Xα Scattered-wave Cluster Method	332
Dr. K. H. Johnson, Massachusetts Institute of Technology, Cambridge, Mass.	
21 Density Matrix Methods in X-ray Scattering and Momentum Space Calculations	357
Dr. R. Benesch, University of Waterloo, Ontario, and Professor V. H. Smith, Jr., Queen's University, Kingston, Ontario	
22 An Approach to the Teaching of Quantum Theory	378
The Science Foundation Course Team, Open University	
Author Index	423
Subject Index	429
