Preface. <i>I. Lindgren, I. Martinson and R. Schuch</i>	3
International Program Committee and Local Organizing Committee	4
Scientific Program	4
List of Participants and Nordic Observers	5
Invited Papers	
Experimental aspects and Z-dependent systematics in one- and two-electron ions and single vacancy systems. <i>R. D. Deslattes</i>	9
P and/or T violation. <i>P. G. H. Sandars</i>	16
Dynamic aspect of electron correlation in atomic collisions: The role of dielectronic processes. <i>N. Stolterfoht</i>	22
Highly ionized atoms in space; or highly ionized atoms, what are they teaching us about the solar coronal heating processes? <i>U. Feldman</i>	34
Quantum electrodynamics calculations in few-electron systems. <i>P. J. Mohr</i>	44
Theory of many-electron atoms. <i>J. Sapirstein</i>	52
Lamb shift measurement in lithiumlike uranium (U^{89+}). <i>H. Gould</i>	61
Classification of highly correlated electronic states. <i>C. D. Lin</i>	65
Electron capture in highly charged ion-atom collisions. <i>R. Morgenstern</i>	75
Latest hot topics in atomic physics research at GSI. <i>P. Kienle</i>	81
On the checks of fundamental symmetries in atomic physics. <i>I. B. Khriplovich</i>	90
Atomic parity nonconservation and electric dipole moment experiments – a 1992 review. <i>E. D. Commins</i>	92
Structure Symposium	
Remarks on the structure symposium. <i>Y.-K. Kim</i>	101
Many-body perturbation theory in atomic structure calculations. <i>A.-M. Mårtensson-Pendrill</i>	102
Projection operator in the multiconfiguration Dirac-Fock method. <i>P. Indelicato and J. P. Desclaux</i>	110
QED Symposium	
Introduction to the QED symposium. <i>G. Soff</i>	115
High precision calculations and QED effects for two- and three-electron atoms. <i>G. W. F. Drake</i>	116
A new approach to the electron self energy calculation. <i>H. Persson, I. Lindgren and S. Salomonson</i>	125
Partial-wave mass renormalization in atomic QED calculations. <i>H. M. Quiney and I. P. Grant</i>	132
Inner shell transitions in heavy atoms. <i>E. Lindroth and P. Indelicato</i>	139
<i>Ab initio</i> calculations of QED effects in Li-like, Na-like and Cu-like ions. <i>S. A. Blundell</i>	144
Higher-order QED corrections for multi-charged ions. <i>L. Labzowsky, V. Karasiev, I. Lindgren, H. Persson and S. Salomonson</i>	150
Present status and prospect of the experimental study of QED in high Z ions. <i>J. P. Briand</i>	157
Lamb shift experiments with the laser resonance method: Present and future. <i>P. von Brentano, D. Platte, D. Budelsky, L. Kremer, H. J. Pross and F. Scheuer</i>	162
Density functional theory of relativistic systems. <i>R. M. Dreizler</i>	167
Quantum electrodynamics of multiphoton ionization. <i>T. Åberg</i>	173
PNC Symposium	
Parity non-conserving effects in atomic systems. <i>A.-M. Mårtensson-Pendrill</i>	182
Atomic structure calculations associated with PNC experiments in atomic cesium. <i>W. R. Johnson, J. Sapirstein and S. A. Blundell</i>	184
The possibility to observe P and PT violation using the NMR frequency shift in a laser beam. <i>O. P. Sushkov</i>	193
Dynamical enhancement of weak interactions and quantum chaos. <i>V. V. Flambaum</i>	198
Collision Symposium	
Interactions of highly charged ions with atoms and surfaces: Introduction to the mini-symposium. <i>A. Niehaus</i>	208
Multiple electron capture by highly charged ions (electron-nucleus versus electron-electron interactions). <i>M. Barat, M. N. Gaboriaud and P. Roncin</i>	210
Strong radiative decay of double Rydberg states in high-q ions. <i>H. Cederquist, C. Biedermann, N. Selberg, L. Liljeby and E. Beebe</i>	218
Above-surface neutralization of highly charged ions: the formation of hollow atoms. <i>J. Burgdöfer and F. Meyer</i>	225
Evolution of ions after multiple electron capture from surfaces. <i>R. Morgenstern and J. Das</i>	231
Summaries	
Atomic collision physics – a summary and some projections. <i>S. Datz</i>	236
QED in the ion age. <i>J. Sucher</i>	239

Contributed Papers

Non-adiabatic ionization of hydrogen atoms by highly charged ions. *A. Bárány and S. Ovchinnikov* 243

Interaction between slow positrons and atoms. *V. A. Dzuba, V. V. Flambaum, W. A. King, B. N. Miller and O. P. Sushkov* 248

Logarithmic corrections in the two-body QED problem. *I. B. Khriplovich, A. I. Milstein and A. S. Yelkhovsky* 252

Computer graphics based analysis and visualization of semiclassical collision theory. *L. Kocbach* 261

Radiative corrections in strong Coulomb fields. *G. Soff* 266
