

Contents

<i>Preface</i>	vii
Chapter 1. Introduction	
1. The Schrödinger Equation	1
2. The Relation of the Boundary Condition to the Experimental Situation.	3
3. The Cross Section	6
4. The Optical Theorem.	9
5. Scattering from a Collection of Scatterers.	10
Chapter 2. The Wave Packet Description of a Scattering Experiment	
1. The Free-Particle Wave Packet	14
2. Wave Packet Description of a Scattering Experiment	16
Chapter 3. Differential Equation Methods	
1. Partial Wave Expansion	26
2. Calculation of the Phase Shift.	34
3. The Low-Energy Limit	44
4. The High-Energy Limit.	52
5. Elastic Scattering by a Coulomb Potential	63
Chapter 4. Green's Functions	
1. Integral Form of the Schrödinger Equation	73
2. Properties of Green's Functions	79
3. Eigenfunction Expansions of Green's Functions	84

4. Green's Function in Three Dimensions	107
5. Many-Particle Green's Functions	121
Chapter 5. Integral Equations of Scattering Theory and Their Solutions	
1. Integral Equations for the Wave Function	127
2. Time-Dependent Derivation of the Integral Equation.	136
3. Methods of Solution: The Born Approximation and the Fredholm Method	141
4. The Integral Equation for the Scattering Amplitude	157
Chapter 6. The Operator Formalism in Two-Particle Scattering Theory	
1. Operator Formalism	163
2. Operator Form of the Scattering Equations	171
3. The Optical Theorem	183
Chapter 7. Cross Sections for General Collision Processes	
1. General Scattering Formalism for Ordinary Scattering Processes	188
2. Rearrangement Collisions.	197
3. Collisions Involving Identical Particles	205
Chapter 8. The Time-Dependent Approach to Scattering Theory	
1. The Schrödinger and Interaction Pictures	212
2. Infinite Limits.	217
3. Relation to the Time-Independent Theory.	222
4. The Cross Section	225
Chapter 9. The S Matrix and the K Matrix	
1. The S Matrix	227
2. The Optical Theorem and the K Matrix	235
3. Diagonalization of the S Matrix	244
Chapter 10. Invariance Principles and Conservation Laws	
1. Invariance under Space Translations	249
2. Invariance under Time Translations	255
3. Galilean Invariance	255
4. Rotation Invariance	261
5. Reflection Invariance	263
6. Time-Reversal Invariance.	266

Chapter 11. Spin and Angular Momentum

1. System of Spin $\frac{1}{2}$	279
2. Addition of Spin and Orbital Angular Momentum	286
3. Radial Integral Equation for Scattering by a Spin-Zero Target	289
4. Scattering Amplitudes and T Matrices	292
5. Cross Sections and Polarizations.	299
6. Matrix Methods.	307
7. Projection Operators	316

Chapter 12. Applications

1. The Two-Potential Formula.	321
2. Some Examples of the Two-Potential Approach—The Distorted-Wave Approximation	327
3. The Impulse Approximation	341
4. Scattering by a Many-Body System	350
5. The Optical Potential and the Elastically Scattered Wave	363
6. Resonances	379

Index	391
