

CONTENTS

PREFACE	ix
CHAPTER 1. THE OLD QUANTUM THEORY	1
1. Energy Quanta	1
2. Quanta of Action and Light Quanta	3
3. The Compton Effect	3
4. The Discovery of the Atomic Nucleus	6
5. The Fundamental Postulates of the Quantum Theory	7
6. The Experimental Foundation for Bohr's Postulates	9
7. Sommerfeld's and Bohr's Quantum Conditions	13
8. The Correspondence Principle	18
9. The Rydberg-Ritz Formula. The Excited Electron. The Atomic Core	22
10. The Complex Structure of Spectral Terms	26
CHAPTER 2. MATTER WAVES AND THE SCHRÖDINGER WAVE EQUATION	36
11. The Discovery of Quantum Mechanics	36
12. Matter Waves and the Special Theory of Relativity	38
13. Experimental Proofs of the Existence of Matter Waves	40
14. The Schrödinger Wave Equations	42
CHAPTER 3. THE MATHEMATICAL APPARATUS OF THE QUANTUM MECHANICS	53
15. Eigenvalue Problems	53
16. Hermitian, or Real, Operators	60
17. Properties of Eigenfunctions	65
18. Products of Operators	77
19. Representatives and Representations of Functions and Operators	82
20. Unitary Transformations	93
CHAPTER 4. THE SIMPLEST SPECIAL PROBLEMS OF WAVE MECHANICS	111
21. The Linear Harmonic Oscillator	111
22. Angular Momentum and its Operators	122
23. The Two-body Problem. The Rotator	136
24. The One-electron Atom	142
25. The Zeeman Effect	150
26. Eigenvalue Problems of Momentum Operators	153
27. Parity	157
CHAPTER 5. THE PHYSICAL INTERPRETATION OF THE QUANTUM MECHANICS	175
28. Statistical Description of Natural Phenomena	175
29. Measurement of the Position and Momentum of a Particle	176

30. Interpretation of the Heisenberg Uncertainty Relation by Means of Wave Packets	181
31. The Principle of Complementarity	184
32. Statistical Interpretation of Wave Functions	186
33. The Equation of Continuity	192
34. Penetration of a Potential Barrier by a Particle. The Tunnel Effect	197
35. Measurements of Physical Quantities Associated with Operators which Are Functions of Coordinates	204
36. Measurements of Physical Quantities Associated with Arbitrary Real Operators	206
37. Momentum Representation	214
38. Heisenberg's Matrix Mechanics	222
39. Dirac's Method of State Symbols	231
CHAPTER 6. THE SPIN OF THE ELECTRON AND OTHER ELEMENTARY PARTICLES. THE PAULI EXCLUSION PRINCIPLE	258
40. Electron Spin	258
41. Particles with Higher Spin Angular Momenta	264
42. The Representatives of the Operators \hat{J}^+ and \hat{J}^-	267
43. Addition of Angular Momenta	270
44. The Simultaneous Eigenfunctions of the Orbital and Spin Angular Momenta of a Single Electron	273
45. Symmetric and Antisymmetric States. The Pauli Exclusion Principle	276
CHAPTER 7. APPROXIMATE METHODS OF SOLVING EIGENVALUE PROBLEMS	285
46. Non-homogeneous Eigenvalue Problems	285
47. Schrödinger's Perturbation Theory for Non-degenerate Eigenvalues	288
48. Perturbation Theory for Degenerate Eigenvalues	291
49. The Ground State of a Two-electron Atom	293
50. Excited States of a Two-electron Atom	298
51. The Role of Electron Spins in a Two-electron Atom	305
52. The Variational Method for Computing the Energy of Quantum States	309
53. Chemical Bonds. The Hydrogen Molecule. Exchange Forces	313
54. Para- and Orthohydrogen	321
55. The WKB Method	326
CHAPTER 8. THE THEORY OF SINGLE SCATTERING	340
56. Cross Sections	340
57. Born's Theory of Scattering	343
58. Spherical Waves of Free Particles	352
59. The Phase-shift Method for Computing Cross Sections	356
60. The Phase Shifts δ_l	362
61. Scattering by a Perfectly Rigid Sphere	365
62. Resonance Scattering	367
63. Determination of Phase Shifts by Means of Integral Equations	371
64. Schwinger's Variational Method for the Determination of Phase Shifts	375
65. Scattering of Particles by a Coulomb Potential	378

CHAPTER 9. ATOMS AND MOLECULES	388
66. Slater's Eigenfunctions of Zero-order Approximation	388
67. Electron Shells and Subshells. The Periodic Table of Elements	392
68. Russell-Saunders Coupling	398
69. The Thomas-Fermi Statistical Atomic Model	403
70. Hartree's Method of Self-consistent Fields	409
71. Molecules	415
CHAPTER 10. THE DIRAC EQUATION	424
72. The Klein-Gordon Relativistic Wave Equation	424
73. The Dirac Equation for the Field-free Case	427
74. The Dirac Equation in the Case of External Fields	432
75. The Equation of Continuity	438
76. Angular Momentum	441
77. Atom with One Spin Electron	445
78. Negative Energies. The Positron. Pair Production. Electron Annihilation	460
79. Plane Electron Waves	464
CHAPTER 11. QUANTIZATION OF AN ELECTROMAGNETIC FIELD. EMISSION AND ABSORPTION OF LIGHT	477
80. The Hamiltonian Function of Electromagnetic Radiation in Classical Physics	477
81. Quantization of an Electromagnetic Field in Vacuum	484
82. Dirac's Perturbation Theory for Initial-value Problems	488
83. The Interaction Hamiltonian and Its Matrix	494
84. Emission and Absorption of Light	498
85. Electric Dipole Radiation	509
86. Electric Quadrupole and Magnetic Dipole Radiation	514
87. Planck's Radiation Formula	519
APPENDIX A. THE PRINCIPLES OF MECHANICS	524
A1. Introduction	524
A2. Lagrange's Equations	524
A3. Lagrangians in Special Cases	525
A4. Generalized Momenta	527
A5. Hamilton's Canonical Equations	528
A6. Hamiltonians in Special Cases	529
A7. Poisson Brackets	530
A8. Canonical Transformations	531
A9. The Hamilton-Jacobi Partial Differential Equation	534
APPENDIX B. THE POLYNOMIAL METHOD FOR SOLVING EIGENVALUE PROBLEMS OF SECOND-ORDER DIFFERENTIAL EQUATIONS	536
B1. Eigenvalue Problems of Quantum Mechanics	536
B2. The Ordinary Riemann P Function	539
B3. Second-order Differential Equations and Related Eigenvalue Problems whose Solutions Are Given by Ordinary Riemann P Functions	544

B4. Eigenvalue Problems of Associated Legendre Functions	549
B5. The Confluent Riemann P Function. Second-order Differential Equations and Related Eigenvalue Problems Capable of Solution by Means of this Function	552
B6. First Example of an Eigenvalue Problem in an Infinite Domain. Linear Harmonic Oscillator	557
B7. Second Example of an Eigenvalue Problem in an Infinite Domain. The Radial Function of a One-electron Atom	559
B8. Determination of the Form of "Potentials" q for which Eigenvalue Problems Can Be Solved by the Polynomial Method	561
B9. Tabulation of Formulae for Solving Eigenvalue Problems by the Sommerfeld Method	563
PRINCIPAL CONSTANTS OF ATOMIC PHYSICS	569
INDEX	571
