

# Contents

Introduction . . . . .	1
Definitions and Notations . . . . .	6
<b>Part I The Basic Lagrangians of Quantum Field Theory . . . .</b>	<b>11</b>
1 The Simplest Lagrangians . . . . .	13
2 Quadratic Lagrangians . . . . .	17
3 Internal Symmetries . . . . .	19
4 Gauge Fields . . . . .	24
5 Particles Corresponding to Nonquadratic Lagrangians . . . . .	28
6 Lagrangians of Strong, Weak and Electromagnetic Interactions . . . .	30
7 Grand Unifications . . . . .	37
<b>Part II Topological Methods in Quantum Field Theory . . . .</b>	<b>41</b>
8 Topologically Stable Defects . . . . .	43
9 Topological Integrals of Motion . . . . .	56
10 A Two-Dimensional Model. Abrikosov Vortices . . . . .	62
11 't Hooft–Polyakov Monopoles . . . . .	68
12 Topological Integrals of Motion in Gauge Theory . . . . .	74
13 Particles in Gauge Theories . . . . .	80
14 The Magnetic Charge . . . . .	83
15 Electromagnetic Field Strength and Magnetic Charge in Gauge Theories . . . . .	89
16 Extrema of Symmetric Functionals . . . . .	94
17 Symmetric Gauge Fields . . . . .	97
18 Estimates of the Energy of a Magnetic Monopole . . . . .	104
19 Topologically Non-Trivial Strings . . . . .	109
20 Particles in the Presence of Strings . . . . .	115
21 Nonlinear Fields . . . . .	122
22 Multivalued Action Integrals . . . . .	128
23 Functional Integrals . . . . .	132
24 Applications of Functional Integrals to Quantum Theory . . . . .	138
25 Quantization of Gauge Theories . . . . .	146

26	Elliptic Operators	158
27	The Index and Other Properties of Elliptic Operators	163
28	Determinants of Elliptic Operators	169
29	Quantum Anomalies	173
30	Instantons	183
31	The Number of Instanton Parameters	194
32	Computation of the Instanton Contribution	199
33	Functional Integrals for a Theory Containing Fermion Fields	207
34	Instantons in Quantum Chromodynamics	216
<b>Part III</b>	<b>Mathematical Background</b>	<b>221</b>
35	Topological Spaces	223
36	Groups	225
37	Gluing	229
38	Equivalence Relations and Quotient Spaces	233
39	Group Representations	235
40	Group Actions	241
41	The Adjoint Representation of a Lie Group	245
42	Elements of Homotopy Theory	247
43	Applications of Topology to Physics	257
	Bibliographical Remarks	261
	References	263
	Index	269
