Chapter 1

History of the Einstein–Podolsky–Rosen Paradox

1

1. Early Formulations	1
1.1. The Einstein–Podolsky–Rosen Paper (1935)	1
1.2. Bohr’s Answer (1935)	5
1.3. Schrödinger’s Extension (1935)	8
1.4. Furry’s Hypothesis (1936)	9
1.5. Bohm’s Formulation (1951)	12
1.6. The Bohm–Aharonov Conclusion (1957)	16
2. Inequalities from Einstein Locality	19
2.1. Bell’s Inequality (1965)	19
2.2. The Strong Inequalities (1969)	21
2.3. Wigner’s Proof of Bell’s Inequality (1970)	26
2.4. Bell’s Inequality within Quantum Theory (1973)	28
2.5. Factorizable Probabilities (1974)	30
2.6. An Infinite Set of Inequalities (1980)	33
2.7. Rapisarda’s Experiment (1981)	34
2.8. Is Factorizability General Enough?	36
2.9. The EPR Paradox in Particle Physics (1981–1987)	40
2.10. Experiments with Pairs of Atomic Photons (1972–1987)	42
3. Attempted Solutions of the Paradox	47
3.1. Unbroken Wholeness	47
3.2. Superluminal Connections in Dirac’s Aether	49
3.3. Nonlocal Weak Realism	51
3.4. Actions of the Future on the Past	53
3.5. The Nonergodic Interpretation	55
3.6. Negative Probabilities	57
3.7. Variable Probabilities	58
Literature Cited and Bibliography	60

Chapter 2

Are Faster-Than-Light Influences Necessary?

63

Henry P. Stapp

1. Faster-Than-Light Influences and Signals	63
2. The Spin-Correlation Experiment	64

3. The Naive Argument	66
4. Orthodox Responses to the Naive Argument	68
5. The EPR Argument	69
6. Bohr's Rebuttal	71
7. Bell's Theorem	72
8. Failure of Local Microrealism	72
9. Failure of EPR Local Realism	73
10. Criterion for the Existence of an Influence	76
11. The Existence of Faster-Than-Light Influences	77
12. Analysis of a Counterclaim	82
References	85

Chapter 3

<i>All the Inequalities of Einstein Locality</i>	87
<i>Augusto Garuccio</i>	

1. Introduction	87
2. The Deterministic Approach	89
2.1. First Method	89
2.2. Second Method—The Roy and Singh Approach	94
2.3. Third Method	96
3. The Probabilistic Approach	97
3.1. General Method	97
3.2. Three Useful Theorems	101
4. The Physical Content of Einstein-Locality Inequalities	102
4.1. First Results of a General Method	102
4.2. The Superinequalities	104
5. New Inequalities for Joint Probabilities	109
5.1. A General Method for Joint Probabilities	109
5.2. A Particular Inequality	110
Appendix	112
References	112

Chapter 4

<i>Einstein-Podolsky-Rosen Experiments Using the Decays of η_c or J/ψ into $\Lambda\bar{\Lambda} \rightarrow \pi^- p \pi^+ \bar{p}$</i>	115
<i>Nils A. Törnqvist</i>	

1. Introduction	115
2. Nonrelativistic Resonance Decay to $\Lambda\bar{\Lambda}$	116
2.1. The $\Lambda \rightarrow \pi N$ Decay	116
2.2. Resonance Decay into $\Lambda\bar{\Lambda} \rightarrow \pi^- p \pi^+ \bar{p}$	117
2.3. The $\eta_c \rightarrow \Lambda\bar{\Lambda}$ Decay	117
2.4. The Decay $J/\psi \rightarrow \Lambda\bar{\Lambda} \rightarrow \pi^- p \pi^+ \bar{p}$	119
3. Relativistic Effects in J/ψ Decay	121
3.1. General	121
3.2. Special Cases in J/ψ Decay	124

4. The Domains of the Bell Inequalities and Quantum Mechanics . . .	125
5. The DM2 Experiment (Tixier <i>et al.</i>)	129
References	132

Chapter 5

<i>Einstein–Podolsky–Rosen Paradox for the K^0–$\bar{K}^0$ and B^0–$\bar{B}^0$ Systems</i>	133
<i>Dipankar Home</i>	

1. Introductory Remarks	133
2. EPR-Type Situation for the K^0 – $\bar{K}^0$ System	134
3. Proposal for a New Test Using the B^0 – $\bar{B}^0$ System	136
4. Quantum Nonlocality and CP Violation: A Curious Gedanken Example	140
References	146

Chapter 6

<i>Even Local Probabilities Lead to the Paradox</i>	149
<i>Franco Selleri</i>	

1. Introduction	149
2. The Singlet State	150
3. EPR Paradox for a Complete Quantum Theory	151
4. The Case of Incompleteness	154
5. The Nature of the Paradox	157
6. Probabilistic Reality	158
7. Probabilistic Separability	160
8. Time Arrow for Probabilities	161
9. Probabilistic Einstein Locality	162
10. Locality for Conditional Probabilities	162
11. New Proof of Bell’s Inequality	166
12. All the Inequalities of Einstein Locality	169
13. The Need for New Experiments	172
References	174

Chapter 7

<i>The Experimental Investigation of the Einstein–Podolsky–Rosen Question and Bell’s Inequality</i>	175
<i>A. J. Duncan and H. Kleinpoppen</i>	

1. Introduction	175
1.1. The EPR Argument for Photons	176
1.2. Polarization Correlation	177
1.3. Bell’s Inequality for the Ideal Case	179
1.4. Bell’s Inequality in Experimental Situations	181
2. Experiments Utilizing an Atomic Source	183
2.1. Freedman and Clauser (1972)	185
2.2. Holt and Pipkin (1973)	187
2.3. Clauser (1976)	188

2.4. Fry and Thompson (1976)	189
2.5. Aspect, Grangier, and Roger (1981)	190
2.6. Aspect, Grangier, and Roger (1982)	192
2.7. Aspect, Dalibard, and Roger (1982)	193
2.8. Perrie, Duncan, Beyer, and Kleinpoppen (1985)	195
2.9. Hassan, Duncan, Perrie, Beyer, and Kleinpoppen (1986a)	198
2.10. Hassan, Duncan, Perrie, Beyer, and Kleinpoppen (1986b)	199
3. Experiments Utilizing Electron-Positron Annihilation Radiation and Proton Spin	202
3.1. Kasday, Ullman, and Wu (1975)	202
3.2. Faraci, Gutkowski, Notarrigo, and Pennisi (1974)	207
3.3. Wilson, Lowe, and Butt (1976)	210
3.4. Bruno, d'Agostino, and Maroni (1977)	211
3.5. Laméhi-Rachti and Mittag (1976)	211
4. Discussion and Proposals for Future Experiments	215
References	217

Chapter 8

<i>Rapisarda's Experiment: Testing Quantum Mechanics versus Local Hidden-Variable Theories with Dichotomic Analyzers</i>	219
<i>Lorenzo Pappalardo and Filippo Falciglia</i>	

1. Introduction	219
2. Ideal Experiments with Dichotomic Analyzers	220
3. Experiments Based on CHSH and CH Configurations	224
4. From Ideal to Real Experiments with Dichotomic Analyzers	225
5. Rapisarda's Experiment	227
5.1. Source of the Photon Couples	227
5.2. Analyzing and Detecting Apparatus	229
5.3. Data Collection and Analysis	230
6. Interpretation of Results and Further Experimental Tests	231
6.1. On the Kinematics of the Correlation Propagation	231
6.2. Magnetic Field Effects on the Polarization Correlation	232
6.3. Test of Additional Assumptions	233
References	233

Chapter 9

<i>Nonlocality and the Einstein-Podolsky-Rosen Experiment as Understood through the Quantum-Potential Approach</i>	235
<i>D. Bohm and B. J. Hiley</i>	

1. Introduction	235
2. The Experiment of Einstein, Podolsky, and Rosen	237
3. The von Neumann Theory of Measurement	242
4. Brief Résumé of Measurement Theory in the Causal Interpretation	247
5. The Causal Interpretation of the EPR Experiment	251

6. The EPR Experiment and Relativity	253
7. Conclusion	255
References	255

Chapter 10

<i>Interpretation of the Einstein–Podolsky–Rosen Effect in Terms of a Generalized Causality</i>	257
<i>Jerzy Rayski</i>	

1. Introduction	257
2. Causality within Classical Physics	258
3. The EPR Effect and Anticausality	258
4. Is Quantum Mechanics Reversible?	259
5. An Analysis of the Measurement Process	261
6. Applicability Backward in Time	263
7. The EPR Effect and Realism	264
8. The Grandfather Paradox	265
9. Conclusions	266
Appendix. Perfect Measurements	267
References	271

Chapter 11

<i>Quantum Action-at-a-Distance: The Mystery of Einstein–Podolsky–Rosen Correlations</i>	273
<i>A. Kyprianidis and J. P. Vigiér</i>	

1. Introduction	273
2. The Quantum Formalism and Acausal Deviations	275
3. A Scalar Action-at-a-Distance Mechanism	279
4. Spin-Dependent Action-at-a-Distance	285
5. The Sutherland Paradox and Its Causal Resolution	290
6. The Physical Origin of Nonlocality: Stochastic Motions in the Dirac Aether	293
7. Conclusions	297
References	298

Chapter 12

<i>Particle Trajectories and Quantum Correlations</i>	301
<i>C. Dewdney and P. R. Holland</i>	

1. Introduction	301
2. The Causal Interpretation of Quantum Mechanics	302
3. Nonlocality and the Causal Interpretation of Two-Particle Motion	303
3.1. Particle Motions and Quantum Statistics	304
3.2. EPR Correlations	308
4. The Causal Interpretation of Spin	310
4.1. Spin Measurement	314

5. Nonlocal Spin Correlations in the Two-Particle Case	317
5.1. The Two-Body Pauli Equation	317
5.2. EPR Spin Correlations	319
6. Conclusion	323
References	325

Chapter 13

Bell's Inequality and the Nonergodic Interpretation of Quantum Mechanics

327

Vincent Buonomano

1. Introduction	327
2. The Physical Viewpoint	327
2.1. The Physical Idea	327
2.2. The Formal Definition	328
2.3. The Medium	329
2.4. Memory Decay Time	329
3. Time Averages	330
4. One-Directional Information Flow	331
5. Two-Directional Information Flow	333
5.1. A Formal Example	333
5.2. Discussion	334
5.3. Aspect's Experiment	335
6. Some Comments	335
6.1. Interference Is Independent of Intensity, but	335
6.2. A Comment on the Joint Probability Question	336
Appendix 1. An Experimental Test	336
Appendix 2. Nelson's Stochastic Mechanics	340
References	342

Chapter 14

An Extended-Probability Response to the Einstein–Podolsky–Rosen Argument

345

W. Mückenheim

1. Introduction	345
2. Axioms	347
3. Extended Probabilities	348
4. Bell's Inequalities Circumvented	351
4.1. Correlated Pairs of Spin- $\frac{1}{2}$ Particles	352
4.2. Correlated Photon Pairs	358
5. Conclusion	362
References	363

*Chapter 15**The Search for Hidden Variables in Quantum Mechanics* 365*Emilio Santos*

1. Can Quantum-Mechanical Description of Physical Reality Be Considered Complete?	365
2. The Various Kinds of Hidden Variables	369
3. Are Noncontextual Hidden-Variables Theories Still Possible?	376
4. Elements of Physical Axiomatics	378
5. Tests of Noncontextual Hidden-Variables Theories	383
6. Experimental Tests of the Inequalities	387
7. Conclusions	389
References	389

*Chapter 16**Variable Detection Probability Models for Einstein–Podolsky–Rosen-Type Experiments* 391*Saverio Pascazio*

1. Introduction	391
2. The No-Enhancement Hypothesis	392
3. The Model by Marshall, Santos, and Selleri	396
4. The Distance Separating Quantum Theory from Local Realism	398
5. Garuccio and Selleri's Proposal	400
6. The Counterexample by Ferrero, Marshall, and Santos	405
7. Disguised VDPs	407
8. Concluding Remarks	409
References	410

*Chapter 17**Stochastic Electrodynamics and the Einstein–Podolsky–Rosen Argument* 413*Trevor Marshall*

1. Introduction	413
2. Stochastic Realism: The Need for Enhancement	415
3. Stochastic Optics: The Mechanism of Enhancement	419
4. The Beam Splitter in Stochastic Optics	424
5. Future Experiments	428
6. Conclusions	430
References	431

*Chapter 18**Explicit Calculations with a Hidden-Variable Spin Model* 433*A. O. Barut*

1. Introduction	433
2. Classical Spin	433
3. The Stern–Gerlach Experiment with Classical Spins	435

4. On the Quantum Theory of the Stern-Gerlach Experiment	437
5. Two-Spin Correlation Experiments	439
6. Individual Events	440
7. Conclusions	446
References	446

Chapter 19

<i>Symmetric and Asymmetric Models for Atomic Cascade Experiments</i>	447
---	-----

Miguel Ferrero, Trevor Marshall, and Emilio Santos

1. Introduction	447
2. Experiments with Two Polarizers	447
3. Experiments with More than Two Polarizers	449
4. Symmetric Local Realist Models	452
References	456

<i>Index</i>	457
