

## CONTENTS

INTRODUCTION .....	vii
CHAPTER I: THE ROLNIK CONDITION	
I.1. Relation to $L^p$ spaces .....	3
Appendix 1 to I.1. The Weak $L^p$ spaces .....	7
Appendix 2 to I.1. The Sobolev Inequality .....	9
I.2. The $p$ -space Form .....	12
I.3. Relation to the Born Series .....	15
I.4. Integral Kernels .....	20
I.5. Potentials of Finite Range .....	24
I.6. Examples .....	27
Appendix to I.6. Evaluation of Some Integrals .....	29
CHAPTER II: THE HAMILTONIAN	
II.1. Introduction .....	31
II.2. Definition as a Quadratic Form .....	38
II.3. Tiktopoulos' Formula .....	45
II.4. Approximation Theorems .....	47
II.5. Domains of Essential Self-Adjointness .....	49
II.6. Feynman Path Integrals .....	50
II.7. The Time-Dependent Schrödinger Equation .....	53
Appendix to II.7. A General Theorem on Time-Dependent Evolution Equations .....	58
II.8. Analyticity in the Coupling Constant .....	68
Appendix 1 to II.8. Analyticity and Compactness .....	69
Appendix 2 to II.8. Continuity and the Min-Max Principle .....	71
II.9. The Green's Function as an Integral Operator .....	72
Addendum to Chapter II. The Rollnik Condition in $R^n (n \neq 3)$ ....	77

## CHAPTER III: BOUND STATES

III.1. Introduction .....	79
III.2. The Integral Equation for Bound States .....	80
III.3. Bounds on the Number of Eigenvalues .....	85
III.4. Positive Energy Eigenvalues .....	89

## CHAPTER IV: TIME-DEPENDENT SCATTERING THEORY

IV.1. Introduction .....	94
IV.2. The Existence of the Møller Wave Operators .....	102
IV.3. Unitarity of the S-Matrix .....	105
Appendix to IV.3. Modified (KC) for Rollnik Potentials with Coulombic Tails .....	110
IV.4. Approximation Theorems .....	111
IV.5. Eigenfunction Expansions .....	115
Appendix 1 to IV.5. Solutions of Hilbert-Schmidt Integral Equations with Kernels Continuous on the Boundary of a Region .....	126
Appendix 2 to IV.5. A $\delta$ -function Computation .....	128
Bibliographic Note to IV.5. ....	129
IV.6. Asymptotic Completeness .....	129

## CHAPTER V: TIME-INDEPENDENT SCATTERING THEORY

V.1. Introduction .....	132
V.2. The Circularity in Ikebe's Argument .....	133
V.3. Abelian Limits .....	135
V.4. Scattering and Eigenfunction Expansions .....	138
V.5. The S-matrix as a p-space Kernel .....	143

## CHAPTER VI: ANALYTIC SCATTERING THEORY

VI.1. Introduction .....	146
VI.2. Analyticity of the Forward Amplitude: Forward Dispersion Relations .....	148
Appendix to VI.2. Behavior of Eigenfunctions at Infinity .....	154

VI.3. Analyticity of the Non-Forward Amplitude .....	155
VI.4. The Partial Wave Expansion .....	162
Appendix to VI.4. Convergence of Legendre Series .....	165
 CHAPTER VII: MULTIPARTICLE SYSTEMS	
VII.1. Introduction .....	174
VII.2. A Factorized Weinberg-Van Winter Expansion .....	175
VII.3. Hunziker's Theorem .....	185
Appendix 1 to VII.3. Removing the Center of Mass .....	190
Appendix 2 to VII.3. Bound States of Helium .....	194
Appendix 3 to VII.3. Operators with Hilbert-Schmidt Fibers .....	196
Appendix 4 to VII.3. An Alternate Proof that $I_S$ is Compact.....	199
 APPENDIX: SOME MATHEMATICAL BACKGROUND	
(a) Basic Definitions for Self-Adjointness .....	201
(b) Spectral Theory for Self-Adjoint Operators .....	207
(c) One-Parameter Unitary Groups .....	216
(d) Compact Operators .....	217
(e) The Regularity Theorem for $\Delta$ .....	221
 REFERENCES	
A. Articles, Theses, Summer School Notes .....	223
B. Texts and Monographs .....	237
LIST OF SYMBOLS .....	241
INDEX .....	243
