Contents

PREFACE ix

CHAPTER 1. QUANTUM-MECHANICAL DESCRIPTION AND REPRESENTATIONS 1
1.1. Quantum-mechanical description of physical systems 1
1.2. The Schrödinger representation 3
1.3. The Heisenberg representation 4
1.4. The interaction representation 5
Problems 6

CHAPTER 2. THE SCATTERING MATRIX AND TRANSITION PROBABILITY 10
2.1. The scattering matrix 10
2.2. The time-shift operator in the interaction representation 13
2.3. Integrals of motion and diagonalization of the S-matrix 17
2.4. The transition probability per unit time 18
2.5. An integral equation for the t-matrix 21
2.6. Transformation of the scattering matrix. Cross-sections 23
Problems 27

CHAPTER 3. STATIONARY SCATTERING THEORY 32
3.1. The scattering amplitude 32
3.2. The Lippmann–Schwinger equation 36
3.3. The relation between the scattering amplitude and the transition matrix 39
3.4. Inelastic scattering and reactions 40
3.5. The Born approximation 43
Problems 46

CHAPTER 4. WAVE FUNCTION OF A PARTICLE IN AN EXTERNAL FIELD 51
4.1. Scattering in a central field. Expansion in partial waves 51
4.2. The rectangular potential well 58
4.3. The Coulomb field 61
Problems 64

CHAPTER 5. THE OPTICAL THEOREM 69
5.1. The relation between the total cross-section and the elastic scattering amplitude 69
5.2. The unitarity relation for the elastic scattering amplitude 70
Problem 72

CHAPTER 6. TIME REVERSAL AND THE RECIPROCITY THEOREM 74
6.1. Transformation of the wave functions and operators on time reversal 74

Contents

6.2. The time-reversal operator for specific systems 77
6.3. The time-reversed wave function 78
6.4. The reciprocity theorem and detailed balance 81
Problems 84

CHAPTER 7. ANALYTIC PROPERTIES OF THE SCATTERING MATRIX 86
7.1. Analytic properties of the radial wave functions 86
7.2. The case of non-zero angular momenta 92
7.3. Zeros of the Jost function and bound states 94
7.4. The symmetry and location of the scattering matrix singularities in the complex plane 98
7.5. Bound states and redundant zeros 102
7.6. Quasi-stationary states and resonances 106
7.7. Virtual states 113
7.8. The scattering matrix in the case of a rectangular potential well 115
Problems 125

CHAPTER 8. DISPERSION RELATIONS 134
8.1. Integral representations of the Jost functions 134
8.2. Levinson's theorem 138
8.3. The complex energy surface 139
8.4. Analyticity of the scattering matrix and the causality principle 141
8.5. Dispersion relations for the scattering amplitude 143

CHAPTER 9. COMPLEX ANGULAR MOMENTA 149
9.1. Analytic properties of the scattering matrix in the complex angular momentum plane 149
9.2. Poles of the scattering matrix in the complex angular momentum plane 154
9.3. Asymptotic behaviour of the scattering amplitude when $\cos\theta \to \infty$ 160
Problems 162

CHAPTER 10. SEPARABLE REPRESENTATION OF THE SCATTERING AMPLITUDE 166
10.1. The scattering amplitude off the energy surface 166
10.2. The Hilbert–Schmidt expansion for the scattering amplitude 169
10.3. Properties of the eigenvalues and eigenfunctions of the kernel of the Lippmann–Schwinger equation 171
Problems 180

CHAPTER 11. SCATTERING IN A THREE-PARTICLE SYSTEM 187
11.1. The Faddeev equations 187
11.2. Positions and momenta in a three-particle system 192
11.3. The momentum representation 194
11.4. Expansion in partial waves 197
11.5. Separable expansion of the two-particle t-matrix and reduction of the Faddeev integral equations to one-dimensional form 200
Problem 207

CHAPTER 12. SCATTERING OF PARTICLES WITH SPIN 211
12.1. The spin wave function and density matrix 211
12.2. Expansion of the density matrix in spin-tensors 218
12.3. The scattering amplitude of particles with spin 224
12.4. Coupling of spin and orbital angular momenta and diagonalization of the S-matrix 230
12.5. Scattering of a spin-$\frac{1}{2}$ particle by a spinless particle 236
12.6. Scattering of a spin-1 particle by a spinless particle 245
Problems 252
Appendix 260

BIBLIOGRAPHY 263
