CONTENTS

CHAPTER 1 **Why Quantum Mechanics?** 1

1.1 Newtonian Mechanics and Classical Electromagnetism 1
(a) Newtonian Mechanics 1
(b) Electromagnetism 2
1.2 Black Body Radiation 3
1.3 The Heat Capacity of Solids and the Photoelectric Effect 4
1.4 Photon Momentum and Compton Scattering Numerical Example 6
1.5 Wave Aspects of Particles Numerical Example 8
1.6 The Hydrogen Atom and the Bohr Model 10
Problems 13

CHAPTER 2 **Operators** 15

2.1 Mathematical Properties of Operators 15
(a) Definitions 15
2.2 The Eigenfunctions and Eigenvalues of Operators 16
2.3 Hermitian Operators 17
2.4 Orthogonality of the Eigenfunctions of a Hermitian Operator 18
2.5 Normalization of Eigenfunctions 19
2.6 Completeness of Eigenfunctions 19
2.7 Dirac Notation 20
Hermitian Adjoint Operators 22
Problems 22

CHAPTER 3 **The Basic Postulates of Quantum Mechanics** 23

3.1 The Basic Postulates of Quantum Mechanics 24
3.2 The Average Value of an Observable 25

3.3 The Form of Quantum Mechanical Operators 26
3.4 The Commutation Relation for the Momentum and Position Operators. Commuting Operators and Their Eigenfunctions 27
3.5 The Significance of $\psi(\mathbf{r})$ 29
3.6 The Eigenfunctions of the Energy Operators—The Schrödinger Equation 29
3.7 The Uncertainty Principle 30
3.8 The Uncertainty Principle Applied to Electromagnetic Fields 32
Problems 34

CHAPTER 4 **One-Dimensional Energy Eigenvalue Problems** **36**

4.1 Infinite Potential Well 36
4.2 Finite Potential Well 38
4.3 Finite Potential Barrier 41
4.4 Physical Manifestation of Particle Tunneling: 44
(a) α Decay of Nuclei 44
(b) Tunneling in Solids 45
Problems 45

CHAPTER 5 **The Harmonic Oscillator** **47**

5.1 Parity 47
5.2 The Harmonic Oscillator 48
The Hermite Polynomials 50
The Harmonic Oscillator—Creation and Annihilation Operators 53
5.3 The Annihilation and Creation Operators 53
Problems 58

CHAPTER 6 **The Quantum Mechanics of Angular Momentum** **59**

6.1 The Angular Momentum Operators 59
6.2 The Eigenfunctions and Eigenvalues of $\hat{l}_z$ 61
6.3 The Eigenfunctions and Eigenvalues of the Squared Magnitude of the Angular Momentum 62
The Normalization of $Y_l^m(\theta, \phi)$ 66
The Parity of $Y_l^m(\theta, \phi)$ 66
Problems 69

CHAPTER 7 **Particles in Spherical Symmetric Potential Fields and the Hydrogen Atom** **70**

7.1 A Particle in a Spherically Symmetric Potential Field 70
7.2 The Hydrogenic Atom 72
The Eigenvalues 74
The Normalization Constant 75
7.3 Nuclear Mass Correction of the Hydrogen Atom Problem 77
Recoil Energies and Doppler Shifts 80
Level Degeneracy 81
Linear Combination of Eigenfunction 82
7.4 Hybridized Wavefunctions and Molecular Bonding 84
Problems 85

CHAPTER 8 **Systems of Identical Particles** **87**

8.1 Systems of Two Electrons 87
8.2 The Helium Atom 90
The First-Order Correction to E_0 91
The Excited States 93
Problems 94

CHAPTER 9 **Matrix Formulation of Quantum Mechanics** **95**

9.1 Some Basic Matrix Properties 95
The Unit Matrix 96
The Inverse Matrix 96
Hermitian Adjoint Matrices, Hermitian Matrices 96
Unitary Matrices 97
9.2 Transformation of a Square Matrix 97
9.3 Matrix Diagonalization 97
9.4 Representations of Operators as Matrices 98
A Unitary Transformation Matrix 99
9.5 Transformation of Operator Representations 99
9.6 Deriving the Eigenfunctions and Eigenvalues of an Operator by the Matrix Method 101
9.7 Matrix Elements of the Angular Momentum Operators 101
9.8 Spin Angular Momentum 105
9.9 Addition of Angular Momenta 106
Problems 108

CHAPTER 10 **The Time-Dependent Schrödinger Equation** 110

10.1 The Statistical Interpretation of $\psi(\mathbf{r}, t)$ 111
10.2 Expectation Values of Operators 112
Ehrenfest's Theorem 113
Problems 114

CHAPTER 11 **Perturbation Theory** 115

11.1 Time-Independent Perturbation Theory 115
First-Order Perturbation 116
Second-Order Perturbation 117
11.2 Time-Dependent Perturbation Theory 118
Harmonic Perturbation 120
Step Function Perturbation 123
Limits of Validity of the Golden Rule 123
11.3 The Density Matrix Formalism 124
Problems 126

CHAPTER 12 **The Interaction of Electromagnetic Radiation with Atomic Systems** 127

12.1 Some Basic Electromagnetic Background 127
The Energy of Electromagnetic Fields 129
12.2 Quantization of Electromagnetic Modes 130
Electromagnetic Creation and Annihilation Operators 132
Traveling Wave Quantization 133
12.3 Black-Body Radiation 133
Derivation of the Average Energy per Mode 136
12.4 Induced Transitions in Collision Dominated Atomic Systems 137
12.5 Spontaneous Transitions 139
12.6 Quantum Mechanical Derivation of the Spontaneous Transition Rate A 141
Problems 145

CHAPTER 13 **Absorption and Dispersion of Radiation in Atomic Media** 147

13.1 The Time Evolution of a Collisionless Two-Level System 148
13.2 Absorption and Amplification in Atomic Systems 152

13.3 Electric Polarization, Susceptibility, and the Dielectric Constant 154
The Significance of $\chi_a(\omega)$ 157
13.4 Density Matrix Derivation of the Atomic Susceptibility 158
The Significance of $\chi'(\omega)$ 164
Problems 164

CHAPTER 14 **Laser Oscillation** **165**

14.1 Laser Oscillation 165
The Fabry–Perot Laser 166
The Laser Oscillation Frequencies 171
The Ruby Laser 172
Summary 173
Problems 174

CHAPTER 15 **Quantum Statistics** **176**

15.1 The Three Types of Quantum Particles 176
15.2 The Counting Algebra for Quantum Systems 179
(A) Identical but Distinguishable Particles 179
(B) Identical Indistinguishable Particles of Half-Odd Integral Spin—Fermions 180
(C) Identical, Indistinguishable Particles of Integral Spin—Bosons 181
15.3 The Maxwell–Boltzmann, Fermi–Dirac, and Bose–Einstein Statistics 182
Case (A) Identical Distinguishable Particles 183
Case (B) Fermions 184
Case (C) Bosons 184
15.4 Systems with More than One Constituent 185
15.5 Evaluating the Parameter β in the Distribution Laws 186
Derivation of g_s (15.38) 187
Problems 189

CHAPTER 16 **Some Specific Applications of the Statistical Distribution Laws** **190**

16.1 The Maxwell–Boltzmann Distribution 190
16.2 Fermi–Dirac Distribution 191
16.3 The Bose–Einstein Distribution 195
Problems 197

CHAPTER 17 **The Band Theory of Electrons in Crystals** 198

17.1 The Kronig–Penney Model 198
17.2 The Multielectron Crystal 207
17.3 The Motion of Electrons in Crystals 210
17.4 The Control of Conductivity of Semiconductors by Impurities 212
Current Flow in Semiconductors 213
Problems 215

CHAPTER 18 **The Interaction of Electrons and Nuclei with Magnetic Fields. Magnetic Resonance. The Maser** 217

18.1 Orbital Magnetic Moments 217
Numerical Example 221
18.2 Spin Angular Momentum 221
18.3 Nuclear Spins and Nuclear Magnetic Resonance 223
18.4 Hyperfine Interaction 226
The Hydrogen Maser 229
18.5 Electron Paramagnetic Resonance 232
Problems 236

CHAPTER 19 **Charge Transport in Semiconductors** 237

19.1 Carriers in Intrinsic Semiconductors 237
Electron Density 238
The Density of Holes 239
Intrinsic Semiconductors 241
19.2 The Ionization Energy of Impurity Atoms 242
19.3 Carrier Concentration in Doped Semiconductors 246
"High" Temperature 247
"Low" Temperature 248
19.4 Scattering of Electrons in Semiconductor Crystals 249
19.5 Diffusion and Recombination 253
The Einstein Relation 254
Recombination of Electrons and Holes 256
The Carrier Transport Equation 257
Diffusion in a Semi-Infinite Slab 258
Problems 259

CHAPTER 20 **The *p-n* Semiconductor Junction. The *p-n-p* Junction Transistor.** **261**

20.1 The Carrier and Potential Profiles in a *p-n* Junction 262
The Contact Potential ϕ 262
20.2 The *p-n* Junction with an Applied Voltage 265
The Current Flow in *p-n* Junctions 267
Junction Fields and Capacitance 269
20.3 The *p-n-p* Junction Transistor 271
The Transistor Currents 273
Problems 278

CHAPTER 21 **The Semiconductor Injection Laser** **280**

21.1 Optical Absorption and Stimulated Emission in Semiconductors 280
Band-to-Band Transitions and Absorption in Semiconductors 281
Problems 292

Bibliography 293
