

Contents

1. Special Relativity, **1**
2. Oblique Axes, **3**
3. Curvilinear Coordinates, **5**
4. Nontensors, **8**
5. Curved Space, **9**
6. Parallel Displacement, **10**
7. Christoffel Symbols, **12**
8. Geodesics, **14**
9. The Stationary Property of Geodesics, **16**
10. Covariant Differentiation, **17**
11. The Curvature Tensor, **20**
12. The Condition for Flat Space, **22**
13. The Bianci Relations, **23**
14. The Ricci Tensor, **24**
15. Einstein's Law of Gravitation, **25**
16. The Newtonian Approximation, **26**
17. The Gravitational Red Shift, **29**
18. The Schwarzschild Solution, **30**
19. Black Holes, **32**

- 20.** Tensor Densities, **36**
- 21.** Gauss and Stokes Theorems, **38**
- 22.** Harmonic Coordinates, **40**
- 23.** The Electromagnetic Field, **41**
- 24.** Modification of the Einstein Equations by the Presence of Matter, **43**
- 25.** The Material Energy Tensor, **45**
- 26.** The Gravitational Action Principle, **48**
- 27.** The Action for a Continuous Distribution of Matter, **50**
- 28.** The Action for the Electromagnetic Field, **54**
- 29.** The Action for Charged Matter, **55**
- 30.** The Comprehensive Action Principle, **58**
- 31.** The Pseudo-Energy Tensor of the Gravitational Field, **61**
- 32.** Explicit Expression for the Pseudo-Tensor, **63**
- 33.** Gravitational Waves, **64**
- 34.** The Polarization of Gravitational Waves, **66**
- 35.** The Cosmological Term, **68**
- Index, **71**
