| <i>List of contributors</i>                             | ix |
| <i>Preface</i>  | xi |
| <b>1 Newton's <i>Principia</i></b>                      | 1  |
| <i>S. W. Hawking</i>                                    |    |
| <b>2 Newtonianism and today's physics</b>               | 5  |
| <i>S. Weinberg</i>                                      |    |
| <b>3 Newton, quantum theory and reality</b>             | 17 |
| <i>R. Penrose</i>                                       |    |
| 3.1 Newton's corpuscular-undulatory theory and reality  | 17 |
| 3.2 Stated reasons for rejection of wave theory         | 18 |
| 3.3 Newton and relativity                               | 20 |
| 3.4 Newton's route to an undulatory-corporcular picture | 24 |
| 3.5 Quantum mechanics                                   | 25 |
| 3.6 Physical reality                                    | 26 |
| 3.7 Reality of the state vector                         | 27 |
| 3.8 Quantum non-locality                                | 29 |
| 3.9 Quantum mechanics and macroscopic physics           | 31 |
| 3.10 Linearity and time-evolution                       | 32 |
| 3.11 Quantum gravity and time-asymmetry                 | 34 |
| 3.12 Time asymmetry of state-vector reduction           | 37 |
| 3.13 Reduction and the (longitudinal) graviton count    | 42 |
| 3.14 Non-locality in quantum geometry                   | 45 |
| <i>References</i>                                       | 48 |
| <b>4 Experiments on gravitation</b>                     | 51 |
| <i>A. H. Cook</i>                                       |    |
| 4.1 Introduction  | 51 |
| 4.2 Theoretical framework                               | 52 |
| 4.3 The inverse square law                              | 56 |
| 4.4 The weak equivalence principle                      | 60 |
| 4.5 Preferred frames and locations                      | 65 |
| 4.6 Additional deviations from general relativity       | 67 |
| 4.7 The measurement of the constant of gravitation      | 70 |

|          |   |            |
|----------|---|------------|
| 4.8      | Conclusion  | 75         |
|          | <i>References</i>   | 77         |
| <b>5</b> | <b>Experimental gravitation from Newton's <i>Principia</i> to Einstein's general relativity</b> | <b>80</b>  |
|          | <i>C. M. Will</i>   |            |
| 5.1      | Introduction  | 80         |
| 5.2      | Newtonian gravitation and general relativity: commonalities and contrasts                       | 82         |
| 5.3      | Testing the fundamentals of gravitation theory  | 84         |
| 5.4      | Testing the applications of gravitation theory  | 101        |
| 5.5      | Beyond the tercentenary   | 120        |
|          | <i>Appendix: The parametrized post-Newtonian formalism</i>                                      | 122        |
|          | <i>References</i>   | 125        |
| <b>6</b> | <b>The problem of motion in Newtonian and Einsteinian gravity</b>                               | <b>128</b> |
|          | <i>T. Damour</i>  |            |
| 6.1      | Introduction  | 128        |
| 6.2      | The $N$ -extended-body problem in Newtonian gravity   | 132        |
| 6.3      | The external and the internal problems of motion (Newtonian case)                               | 134        |
| 6.4      | The effacement of internal structure in the external problem                                    | 136        |
| 6.5      | The effacement of external structure in the internal problem                                    | 140        |
| 6.6      | Newton and the strong principle of equivalence  | 141        |
| 6.7      | Solving the Newtonian problems of motion  | 144        |
| 6.8      | The $N$ -extended-body problem in Einsteinian gravity   | 145        |
| 6.9      | Approximation methods   | 149        |
| 6.10     | The post-Newtonian approximation methods  | 151        |
| 6.11     | The post-Minkowskian approximation methods  | 156        |
| 6.12     | Singular perturbation methods   | 160        |
| 6.13     | The external and the internal problems of motion (Einsteinian case)                             | 162        |
| 6.14     | The effacement of internal structure in the external problem (Einsteinian case)                 | 173        |
| 6.15     | The problem of gravitational radiation damping and the relativistic Laplace effect              | 180        |
| 6.16     | Conclusion  | 191        |
|          | <i>References</i>   | 192        |
| <b>7</b> | <b>Dark stars: the evolution of an idea</b>   | <b>199</b> |
|          | <i>W. Israel</i>  |            |
| 7.1      | Introduction  | 199        |
| 7.2      | Early speculations (1784–1921)  | 201        |
| 7.3      | White dwarfs: the first compact massive objects (1910–26)                                       | 205        |
| 7.4      | The Chandrasekhar limit (1929–35)   | 212        |
| 7.5      | Eddington's intervention (1935)   | 216        |
| 7.6      | Neutron stars and gravitational collapse (1934–59)  | 223        |
| 7.7      | The Schwarzschild 'singularity' (1916–66)   | 231        |
| 7.8      | Quasars and relativistic astrophysics (1951–72)   | 239        |
| 7.9      | Non-spherical collapse: from frozen star to black hole (1964–71)                                | 248        |
| 7.10     | Towards the quantum era: the thermodynamics of black holes (1970–74)                            | 261        |
|          | <i>References</i>   | 266        |
| <b>8</b> | <b>Astrophysical black holes</b>  | <b>277</b> |
|          | <i>R. D. Blandford</i>  |            |
| 8.1      | Introduction  | 277        |
| 8.2      | Black holes in astrophysics   | 280        |

|           |   |     |
|-----------|---|-----|
| 8.3       | Observational evidence for black holes  | 297 |
| 8.4       | Future prospects  | 321 |
|           | <i>References</i>   | 323 |
| <b>9</b>  | <b>Gravitational radiation</b>  | 330 |
|           | <i>K. S. Thorne</i>   |     |
| 9.1       | Introduction  | 330 |
| 9.2       | The physical and mathematical description of a gravitational wave                   | 338 |
| 9.3       | The generation and propagation of gravitational waves                               | 345 |
| 9.4       | Astrophysical sources of gravitational waves  | 364 |
| 9.5       | Detection of gravitational waves  | 400 |
| 9.6       | Conclusion  | 445 |
|           | <i>References</i>   | 446 |
| <b>10</b> | <b>The emergence of structure in the universe: galaxy formation and dark matter</b> | 459 |
|           | <i>M. J. Rees</i>   |     |
| 10.1      | Introduction  | 459 |
| 10.2      | The constituents of the universe: ‘dark’ matter and ‘luminous’ matter               | 463 |
| 10.3      | Large-scale structure and isotropy  | 474 |
| 10.4      | Formation of protogalaxies  | 478 |
| 10.5      | A flat ( $\Omega_0 = 1$ ) universe  | 488 |
|           | <i>References</i>   | 496 |
| <b>11</b> | <b>Gravitational interactions of cosmic strings</b>                                 | 499 |
|           | <i>A. Vilenkin</i>  |     |
| 11.1      | Introduction  | 499 |
| 11.2      | Some properties of strings  | 500 |
| 11.3      | Nambu action  | 501 |
| 11.4      | Gauge conditions  | 503 |
| 11.5      | Oscillating loops   | 504 |
| 11.6      | Waves on infinite strings   | 506 |
| 11.7      | Gravitational field of a straight string  | 507 |
| 11.8      | Gravitational field of a straight string (continued)                                | 509 |
| 11.9      | Physics in conical space  | 511 |
| 11.10     | Other metrics with straight strings   | 513 |
| 11.11     | Gravitational field of oscillating loops  | 514 |
| 11.12     | Gravitational radiation from loops  | 517 |
| 11.13     | Gravitational rocket effect   | 519 |
| 11.14     | Gravitational field of waves on infinite strings                                    | 521 |
|           | <i>References</i>   | 522 |
| <b>12</b> | <b>Inflationary cosmology</b>   | 524 |
|           | <i>S. K. Blau and A. H. Guth</i>  |     |
| 12.1      | Introduction  | 524 |
| 12.2      | Summary of the standard cosmological model  | 526 |
| 12.3      | Problems of the standard cosmological model   | 530 |
| 12.4      | The original inflationary universe  | 539 |
| 12.5      | Successes of the original inflationary model  | 547 |
| 12.6      | Problems of the original inflationary model   | 550 |
| 12.7      | The new inflationary universe   | 555 |
| 12.8      | Density perturbations in the new inflationary universe                              | 561 |

|           |   |     |
|-----------|---|-----|
| 12.9      | Quantum theory of the new inflationary universe phase transition            | 570 |
| 12.10     | Inflation in the minimal $SU(5)$ grand unified theory                       | 579 |
| 12.11     | False vacuum bubbles and child universes                                    | 590 |
| 12.12     | Conclusion  | 594 |
|           | <i>Appendix</i>   | 596 |
|           | <i>References</i>   | 597 |
| <b>13</b> | <b>Inflation and quantum cosmology</b>                                      | 604 |
|           | <i>A. Linde</i>   |     |
| 13.1      | Introduction  | 604 |
| 13.2      | Chaotic inflation   | 607 |
| 13.3      | Inflation and the wave function of the universe                             | 610 |
| 13.4      | Quantum fluctuations in the inflationary universe                           | 612 |
| 13.5      | Eternal chaotic inflation   | 618 |
| 13.6      | Global structure of the inflationary universe and the anthropic principle   | 621 |
| 13.7      | Conclusions   | 628 |
|           | <i>References</i>   | 628 |
| <b>14</b> | <b>Quantum cosmology</b>  | 631 |
|           | <i>S. W. Hawking</i>  |     |
| 14.1      | Introduction  | 631 |
| 14.2      | The quantum state of the universe   | 633 |
| 14.3      | The density matrix  | 636 |
| 14.4      | The Wheeler–De Witt equation  | 638 |
| 14.5      | Minisuperspace  | 640 |
| 14.6      | Beyond minisuperspace   | 645 |
| 14.7      | The direction of time   | 647 |
| 14.8      | The origin and fate of the universe   | 649 |
