

## CONTENTS

INTRODUCTION . . . . .	7
NOTATION . . . . .	9
Chapter I	
GRAVITATIONAL INTERACTION AND THE GENERAL THEORY OF MOTION	
1. General statement of the physical problem. Particles and the gravitational field . . . . .	14
2. Newton's theory of gravitation . . . . .	23
3. Interaction in G. R. T. The equations of motion of the first and second kind . . . . .	29
4. The Einstein field equations . . . . .	35
5. The Bianchi identities . . . . .	41
6. The equations of motion are a consequence of the field equations	44
7. Forms for the equations of motion of the second kind . . . . .	49
8. The equations of motion in gravitational and non-gravitational fields . . . . .	56
9. Equations of motion in different coordinate systems . . . . .	59
10. On the method of solution of the field equations with the help of the dipole procedure . . . . .	63
Chapter II	
THE APPROXIMATION METHOD AND THE EQUATIONS OF MOTION	
1. General remarks on the approximation method . . . . .	68
2. On the development of the metric field . . . . .	71
3. On the three levels of our reasoning . . . . .	73
4. The approximation method and the coordinate system . . . . .	75
5. The approximation method and the field equations . . . . .	78
6. On the two forms of the equations of motion and the integrability conditions . . . . .	89
Chapter III	
THE NEWTONIAN AND POST-NEWTONIAN APPROXIMATION	
1. The Newtonian approximation . . . . .	96
2. The gravitational field for the post-Newtonian equations of motion	99
3. The equations of motion in the post-Newtonian approximation .	103
4. The conservation laws for a system of particles . . . . .	114

Chapter IV  
THE VARIATIONAL PRINCIPLE AND THE EQUATIONS OF MOTION  
OF THE THIRD KIND

1. Formulation of the problem . . . . .	118
2. The Lagrangian up to the sixth order . . . . .	124
3. Generalization . . . . .	129
4. A Fokker-type Lagrangian for rotating bodies . . . . .	130

Chapter V  
THE ONE AND TWO PARTICLE PROBLEMS

1. On the question of measurement . . . . .	136
2. On the motion of a test particle in the field of a heavy particle	144
3. The two-body problem . . . . .	149
4. The motion of rotating bodies . . . . .	155

Chapter VI  
MOTION AND RADIATION

1. A simple example . . . . .	160
2. The equations of motion in the form of a surface integral . . .	166
3. The equations of motion in the form of a space integral . . . .	169
4. The equations of motion in the form of space and surface integrals	170
5. The consequences of the different forms of the equations of motion	171
6. The three linear momenta . . . . .	174
7. The equation for gravitational radiation . . . . .	176
8. On the invariance properties of $P^a_{(G)}$ . . . . .	181
9. Gravitational radiation and the choice of a coordinate system	182
10. On the generalization of the coordinate system . . . . .	190
11. Radiation and the approximation method . . . . .	195

APPENDICES

1. The $\delta$ function . . . . .	202
2. The field values on the world-lines . . . . .	213
3. The covariant character of the $\delta$ 's. Tensors on world-lines . .	217

BIBLIOGRAPHY . . . . .	221
INDEX . . . . .	227
