Preface	page 9
List of Symbols	12
1 Introduction	13
2 The <i>primary experience</i> that is to be modelled by the <i>physical world picture</i>	17
3 Primary experience is chopped up into <i>percepts</i> , and these are assembled into <i>concepts</i> and <i>things</i>	23
4 The concept of <i>number</i> is brought into the picture	30
5 The <i>game of numbers</i>	38
6 The essential structural form of any world picture	44
7 <i>Time</i> and <i>distance</i> numbers	54
8 The <i>game of kinematics</i>	59
9 The game is applied: How to snowball an author. The cathode ray tube and the glow on the TV screen	63
10 The concepts of <i>mass</i> and <i>force</i> are brought into the picture. The <i>game of dynamics</i>	70
11 The force of <i>gravity</i> is deduced	77
12 The force of <i>friction</i> is deduced. The game is applied to studying the motion of a toboggan	84
13 The game is applied to studying the motion of a rocket. The solution is not aesthetically satisfying	90
14 The <i>Laws of Conservation of Energy</i> and <i>Conservation of Momentum</i> are deduced. The laws are successfully applied to the problems of the falling body, and the ballistic pendulum	96
15 The Law of Conservation of Energy is disobeyed. The lost energy is accounted for <i>ad hoc</i> by introducing the concept of <i>coefficient of elasticity</i>	105
16 The Law of Conservation of Energy is properly restored to grace by defining the new concepts of <i>temperature</i> and <i>heat energy</i> . The <i>game of thermodynamics</i>	112
17 The game of Mathematics is extended to <i>differential</i> and <i>integral calculus</i>	122
18 The more comprehensive world picture is applied to the operation of the <i>heat engine</i> . The <i>Carnot cycle</i> . <i>Entropy</i> , and the <i>Second Law of Thermodynamics</i>	127
19 The <i>Theory of Theories</i> . <i>Empirical</i> and <i>metaphysical</i> theories	135
20 <i>Electromagnetic</i> phenomena	142
21 The new experience is quantitatively structured by the <i>theory of electromagnetism</i> and integrated into the evolving world picture	149
22 The game is applied to ammeters, electric motors and generators	158

	<i>page</i>
23 The Law of Conservation of Energy is once more disobeyed, and once more it is restored to grace; this time by introducing the concept of <i>energy transmission by invisible waves</i>	164
24 The game of mathematics is extended to <i>trigonometry</i>	172
25 The theory is applied to the problem of the vibrating string	176
26 <i>Light</i> phenomena	184
27 Light is shown to be a wave	191
28 The <i>electromagnetic wave</i> is deduced from the world picture. Light is identified and brought into the picture	199
29 The corpuscles of micro-experience: <i>electrons</i> and <i>protons</i>	205
30 The attempt to deduce a model for <i>atomic structure</i> from the world picture fails	213
31 The <i>photoelectric effect</i> . The <i>Compton effect</i> . The dichotomy of <i>wave or corpuscle</i> is only apparent and must be changed into the complementary <i>wave and corpuscle</i>	220
32 The world picture is modified and a satisfactory model for the <i>hydrogen atom</i> is now deduced. A look at the structures of some multi-electron atoms	230
33 A closer look at the question of measurement leads to the <i>Uncertainty Principle</i>	236
34 The world picture is restructured to incorporate the Uncertainty Principle. <i>Quantum mechanics</i> . The new game is applied to the problem of a micro-entity trapped in a well	240
35 The null result obtained in the <i>Michelson-Morley experiment</i> leads to the death of the absolute	247
36 The world picture is further modified. <i>Relativistic mechanics</i> . The new theory is confirmed in experience. <i>Atomic energy</i>	251
37 <i>Space-time</i> and <i>General relativity</i> . The geometrizing of the force of gravity	261
38 An attempt to deduce a model for <i>nuclear structure</i>	266
39 <i>Fundamental forces</i> and more fundamental micro-entities. Quarks?	273
Index	280
