

## CONTENTS

|  |     |
|--|-----|
| Preface  | v   |
| Opening Address<br><i>Zhou (Chou) Peiyuan</i>  | vii |
| <b>PART I PLENARY PAPERS</b>   |     |
| Testing General Relativity with POINTS, A Space-Based Astrometric Optical Interferometer<br><i>R. D. Reasenberg, R. W. Babcock, J. F. Chandler &amp; I. I. Shapiro</i> | 3   |
| Hydrogen Maser Clocks and Deep Space Systems Involving Clocks<br><i>Robert F. C. Vessot</i>  | 14  |
| Supernovae, Pulsars, X-Ray Binaries and the Rate of Gravitational Collapse<br><i>David Blair</i>   | 36  |
| Experiments with Resonant Antennas for Detecting Gravitational Waves<br><i>Guido Pizzella</i>  | 52  |
| Experimental Search for A Fifth Fundamental Force<br><i>Paul Boynton</i>   | 75  |
| The Measurement of the Gravitational Constant<br><i>Ying T. Chen</i>   | 90  |
| Further Experiments to Test Einstein's Theory of Gravitation<br><i>Zhou (Chou) Pei-yuan</i>  | 110 |
| Twenty-Five Years of X-Ray Astronomy<br><i>Herbert Gursky</i>  | 117 |
| Astrophysical Constraints on Theories of Gravitation<br><i>Robert V. Wagoner</i>   | 130 |

|  |     |
|--|-----|
| <b>Recent Advances in High Resolution Thin Film DC SQUIDs for Experiments in Gravitational Physics</b> | 156 |
| <i>Claudia D. Tesche</i>   |     |
| <b>Cross Sections, Bandwidths, and Sensitivity of Gravitational Antennas</b>                           | 164 |
| <i>Joseph Weber</i>  |     |
| <b>Gravitational Waves and Cosmology</b>   | 172 |
| <i>L. Z. Fang</i>  |     |
| <b>Cosmological Sources of Gravitational Radiation</b>   | 179 |
| <i>M. V. Sazhin</i>  |     |
| <b>A Geometric Theory of the Creation Field and Gravitation</b>  | 190 |
| <i>Yu Xin</i>  |     |

## PART II SPACE EXPERIMENTS

|  |     |
|--|-----|
| <b>A Test of the General Relativity by Means of SLR Data</b>   | 205 |
| <i>Cheng Zongyi, Yao Min, Yan Haojian, Pan Rongshi, Zhu Wenyaoyao &amp; Zhu Shengyuan</i>  |     |
| <b>A Report on the Gyroscope Development for the Relativity Gyroscope Experiment</b>   | 210 |
| <i>W. S. Cheung, D. Bardas, D. E. Davidson, S. Feteih, S. Fottrell, R. Hoffmann, R. Hacker, G. M. Keiser, T. Lydic, D. Y. Pan, J. P. Turneaure, R. A. Van Patten &amp; P. Zhou</i> |     |
| <b>Methods for Improving the Accuracy of Electrostatic Suspension Systems</b>  | 222 |
| <i>Yang Wu-qiang, Teng Yun-he &amp; Zhang Yan-shen</i>   |     |
| <b>Detection of Gravitomagnetic Field Using an Orbiting Superconducting Gravity Gradiometer</b>  | 229 |
| <i>H. J. Paik, B. Mashhoon &amp; C. M. Will</i>  |     |

|   |     |
|---|-----|
| Lense-Thirring Dragging of Inertial Frames by the Rotating Earth: Progress of a Proposal for Ground Based Detection<br><i>M. Bonaldi, M. Cerdonio, P. Falferi, G. Fontana, A. Goller, A. Maraner, R. Mezzena, G. A. Prodi &amp; S. Vitale</i> | 245 |
| Second Post-Newtonian Order Gravity in the Solar System<br><i>Ken Nordtvedt</i>   | 249 |

### PART III SOURCES OF GRAVITATIONAL RADIATION

|  |     |
|--|-----|
| Source of Gravitational Radiation — A Workshop Summary<br><i>Tsvi Piran &amp; Zhang Zhenjiu</i>  | 259 |
| Electromagnetic Generation and Detection of Gravitational Waves: A Review<br><i>D. Cuomo, G. Franceschetti, G. Panariello, I. M. Pinto, S. P. Petracca, S. Amata &amp; G. Rotoli</i> | 262 |
| Gravitational Radiation from Rotating Gravitational Collapse<br><i>Richard F. Stark &amp; Tsvi Piran</i>   | 268 |
| Gravitational Radiation from Instabilities in Rapidly Rotating Neutron Stars?<br><i>Lee Lindblom</i>   | 276 |
| Gravitational Radiation from Quasars with Two Supermassive Black Holes<br><i>Zhang Zhenjiu, Wang Xunxie, He Changbai, Bao Gang &amp; Zhou Bingju</i>                                 | 283 |
| Gravitational Waves and Massive Tensor Particles<br><i>Venzo de Sabbata</i>  | 288 |
| Narrow Wave Beam-Type Gravitational Radiation of Crystal Space Array<br><i>Li Fangyu, Yu Yiqiao &amp; Tang Mengxi</i>  | 293 |
| Boundary Conditions of Sandwich Gravitational Waves<br><i>Liu Hongya</i>   | 298 |

|  |     |
|--|-----|
| Gravitational Waves from Eccentric Binaries: A Preliminary<br>Census | 301 |
| <i>F. Barone, L. Milano, I. M. Pinto &amp; F. Recano</i>             |     |

#### PART IV LASER INTERFEROMETRIC GRAVITY WAVE DETECTORS

|  |     |
|--|-----|
| Laser Interferometers for Gravitational Wave Detection:<br>An Overview of Prototypes and Plans   | 309 |
| <i>Albrecht Rüdiger</i>  |     |
| Progress on the MIT 5-Meter Interferometer   | 312 |
| <i>R. Benford, M. Burka, N. Christensen, M. Eisgruber,<br/>P. Fritschel, A. Jeffries, J. Kovalik, P. Linsay, J. Livas,<br/>P. Saulson &amp; R. Weiss</i> |     |
| Status of the Garching 30 Meter Prototype for a Large<br>Gravitational Wave Detector   | 316 |
| <i>K. Matischberger, A. Rüdiger, R. Schilling, L. Schnupp,<br/>W. Winkler &amp; G. Leuchs</i>  |     |
| The Glasgow Gravitational Wave Detector — Present Progress<br>and Future Plans   | 322 |
| <i>H. Ward, J. Hough, G. A. Kerr, N. L. Mackenzie, J. B. Mangan,<br/>B. J. Meers, G. P. Newton, D. I. Robertson &amp; N. A. Robertson</i>                |     |
| 10 Meter Laser Interferometer Gravitational Wave Antenna in Japan  | 328 |
| <i>N. Kawashima, S. Kawamura &amp; J. Hirao</i>  |     |
| Gravitational Wave Detectors Using Laser Interferometers   | 332 |
| <i>Lin Jinchuan, Liu Wenxue, Wan Jiancheng, Xu Xuemie,<br/>Zhang Weibin, Li Ming &amp; Xu Huiyao</i>   |     |
| Laser Double-Frequency Lock-in Displacement Sensor with<br>Application to Gravitational Radiation Detection  | 335 |
| <i>Li Yonggui, Qin Rongxian &amp; Zhou Peiyuan</i>   |     |
| Laser-Interferometer Gravitational Radiation Detector  | 338 |
| <i>Zhu Ning, Qin Rong-xian, Li Yong-gui &amp; Zhou Pei-yuan</i>  |     |

|  |     |
|--|-----|
| Electrostatic Forces in Gravity-Wave Interferometers<br><i>Andrej Čadež &amp; Jefferson Harman</i>   | 342 |
| The Pisa Experiments on Seismic Noise Reduction and the<br>Franco-Italian Plans for a Large Interferometer<br><i>A. Giazotto</i>   | 347 |
| <b>PART V RESONANT-MASS GRAVITY WAVE DETECTORS</b>   |     |
| A Gravitational Radiation Antenna with Parametric Transducer<br><i>P. J. Veitch, D. G. Blair, M. J. Buckingham, C. Edwards,<br/>N. P. Linthorne, L. D. Mann, N. P. Prestage,<br/>D. K. Ramm &amp; M. Zeng</i>                                  | 353 |
| How Good is The Earth as a Gravitational Wave Detector?<br><i>S. P. Boughn, S. VanHook, C. M. O'Neill &amp; R. Rangarajan</i>  | 358 |
| Push-Pull Resonant Capacitive Transducer for Parametric<br>Measurement Schemes on Cryogenic Gravitational Wave Antennas<br><i>E. Barro, R. Onofrio, P. Rapagnani &amp; F. Ricci</i>  | 363 |
| RF-Capacitive Transducer Applied to Gravitational Radiation<br>Detector<br><i>Zhu Ning, Guan Tong-ren &amp; Hu En-ke</i>   | 367 |
| The Stanford Gravitational Wave Detection Program: A Plan for<br>Observing the Next Supernova<br><i>P. F. Michelson, W. M. Fairbank, J. Henderson, K. Lane,<br/>M. S. McAshan, J. C. Price, T. Stevenson, R. C. Taber &amp;<br/>B. Vaughan</i> | 371 |
| Data Analysis for Gravity Wave Coincidence Experiments<br><i>Thomas R. Stevenson &amp; John C. Price</i>   | 380 |
| Gravitational Wave Research at LSU<br><i>W. O. Hamilton, W. Johnson, Bu-Xin Xu,<br/>N. Solomonson, O. Aguiar, A. G. Mann,<br/>A. Sibley &amp; B. Price</i>   | 388 |

|  |     |
|--|-----|
| Coincidence Analysis Among Three Resonant Cryogenic Detectors:<br>LSU-Rome-Stanford, April–July 1986     | 394 |
| <i>E. Amaldi, P. Bonifazi, G. V. Pallottino &amp; G. Pizzella</i>  |     |
| Search for Gravitational Radiation from the Crab Pulsar using<br>Cryogenic Detectors                     | 397 |
| <i>S. Owa, M. -K. Fujimoto, H. Hirakawa, K. Morimoto,<br/>T. Suzuki &amp; K. Tsubono</i>                 |     |
| The New Ultralow Temperature Gravitational Wave Detection<br>Project of the Rome Group                   | 403 |
| <i>M. Bassan, E. Coccia, I. Modena, G. Pizzella,<br/>P. Rapagnani &amp; F. Ricci</i>                     |     |
| Parameter Estimation and Digital Filtering for the Geograv<br>Gravitational Antenna                      | 407 |
| <i>Sergio Frasca &amp; Massimo Gabellieri</i>  |     |
| Recent Results with The Cryogenic Gravitational Wave Antenna<br>at I.F.S.I. – C.N.R. in Frascati (Italy) | 409 |
| <i>M. Bassan, P. Bonifazi, F. Bordoni, M. G. Castellano,<br/>V. Iafolla, M. Karim &amp; M. Visco</i>     |     |
| Matched Filtering Techniques for Resonant Gravitational Wave<br>Antennas                                 | 414 |
| <i>G. V. Pallottino</i>  |     |
| DC-SQUID Coupled to a Gravitational-Wave Antenna   | 415 |
| <i>P. Carelli, M. G. Castellano, C. Cosmelli &amp; V. Foglietti</i>                                      |     |
| The Response of a Bar Antenna to the Incident Direction of<br>Gravitational Waves (G.W.)                 | 420 |
| <i>Zheng Qingzhang, Tang Mengxi &amp; Hu Enke</i>  |     |
| <br><b>PART VI LABORATORY AND GEOPHYSICAL EXPERIMENTS</b><br>  |     |
| Laboratory and Geophysical Experiments on Gravitation<br>— An Overview                                   | 425 |
| <i>Ho Jung Paik</i>  |     |

|   |     |
|---|-----|
| Search for Anomalous Intermediate-Range Forces with a<br>Controlled Local Attracting Mass                       | 427 |
| <i>P. Nelson, D. Graham &amp; R. Newman</i>   |     |
| Progress of a Null Test of the Inverse Square Law   | 431 |
| <i>H. J. Paik, Qin Kong &amp; M. Vol Moody</i>  |     |
| A Method to Test Gravitational Inverse Square Law in mm Scale   | 432 |
| <i>Zhang Pinghua</i>  |     |
| Gravitational Strength Forces below 1 cm  | 436 |
| <i>John C. Price</i>  |     |
| Measurement and Control of Distrubing Forces on an Equivalence<br>Principle Experiment                          | 440 |
| <i>Paul W. Worden, Jr.</i>  |     |
| Some Considerations about Experimental Investigation of<br>Distance-Dependent Sub-Gravity at Intermediate Range | 445 |
| <i>Ben-Lin Liu, Din-Ji Song, Han-Zhai Ren,<br/>Zhi-Jian Xu &amp; Jia-Lu Zhang</i>                               |     |
| Detection of Gravitational Effects by Using the Method of<br>Suspension Body                                    | 450 |
| <i>Wang Chi-lun &amp; Lu Pei-yong</i>   |     |
| Progress of Testing the Inverse Square Law at about 1 cm  | 453 |
| <i>Feng Shonglin &amp; Zhang Pinghua</i>  |     |
| Search for Anomalous Spin Interaction between Electrons   | 456 |
| <i>R. C. Ritter, Wei-Tou Ni, C. E. Goldblum &amp; G. T. Gillies</i>   |     |
| A Test for Isotropy of the Velocity of Light in Earth's Gravitational<br>Field                                  | 461 |
| <i>Li Yonggui, Zhou Peiyuan, Qin Rongxin, Mao Dongning,<br/>Zhou Wei &amp; Ji Yuling</i>                        |     |
| Feasibility of a Gravitational Redshift Experiment on Free Moving<br>$\gamma$ -Ray Source in Static Field       | 465 |
| <i>Wang Zhongli, Yu Yiqiao, Li Fangyu &amp; Tang Mengxi</i>   |     |

|   |     |
|---|-----|
| Gravitational Effects on the Anomalous Moment of the Electron<br><i>Munawar Karim</i> | 469 |
|---|-----|

**PART VII GRAVITATIONAL PHYSICS AND ASTRONOMICAL  
OBSERVATIONS**

|  |     |
|--|-----|
| The X-Ray Large Array (XLA) and Experimental Gravitation<br><i>Kent S. Wood &amp; Peter F. Michelson</i> | 475 |
|--|-----|

|   |     |
|---|-----|
| Perturbations of the Sun's Gravitational Field due to Solar<br>Oscillations<br><i>Henry A. Hill</i> | 510 |
|---|-----|

|   |     |
|---|-----|
| Some Observable Astronomical Phenomena Related to General<br>Relativity<br><i>Ye Rengui</i> | 515 |
|---|-----|

|  |     |
|--|-----|
| Nonsymmetric Gravitation Theory<br><i>John W. Moffat</i> | 520 |
|--|-----|

|   |     |
|---|-----|
| Observation of Gravitational Effects Inside the Solar System<br><i>Liu Ming Cheng</i> | 528 |
|---|-----|

**CONCLUSION**

|   |     |
|---|-----|
| Concluding Talk<br><i>Peter G. Bergmann</i> | 533 |
|---|-----|
