<b>1. The Equivalence Principle</b>	
1.1 The Eötvös Experiment. . . . .	1
1.2 Negative Mass . . . . .	5
1.3 Equivalence of Different Frames of Reference . . . . .	6
1.4 Gravitational Red Shift of Spectral Lines . . . . .	8
1.5 Further Remarks on the Equivalence Principle . . . . .	9
<b>2. Generalization of the Special Theory of Relativity</b>	
2.1 The Idea of Covariance. . . . .	11
2.2 The Metric Tensor . . . . .	12
2.3 The Metric Tensor in Curved Spaces and Accelerated Frames . . . . .	12
2.4 General Covariance . . . . .	15
<b>3. Riemannian Geometry and Tensor Calculus</b>	
3.1 Some Ideas about Curvature . . . . .	17
3.2 Transformation Laws for Different Kinds of Tensors . . . . .	18
3.3 Parallel Displacement and Covariant Differentiation . . . . .	22
3.4 The Curvature Tensor . . . . .	28
3.5 The Bianchi Identities . . . . .	32
3.6 Geodesics . . . . .	34
3.7 Some Useful Computational Aids . . . . .	37
3.8 Length Measurements. . . . .	39
3.9 Determination of the Metric Tensor . . . . .	41
<b>4. Field Equations of General Relativity and Electromagnetism</b>	
4.1 The Gravitational Field Equations . . . . .	43
4.2 Variational Principle Deduction of the Field Equations . . . . .	50
4.3 Maxwell's Equations . . . . .	53
4.4 Motion of a Charged Particle . . . . .	54
<b>5. Experimental Tests of General Relativity</b>	
5.1 The Schwarzschild Solution . . . . .	56
5.2 The Gravitational Red Shift. . . . .	60
5.3 Effects on Planetary Orbits . . . . .	64
5.4 Deflection of Light . . . . .	67
5.5 Concluding Remarks . . . . .	69

<b>6. The Conservation Laws</b>	
6.1 The Canonical Stress Energy Pseudotensor . . . . .	70
6.2 Other Conservation Laws . . . . .	79
6.3 Further Remarks on the Conservation Laws . . . . .	85
<b>7. Gravitational Waves</b>	
7.1 Weak-Field Solutions . . . . .	87
7.2 Riemann Tensor for a Wave of Arbitrary Strength Which is Locally Plane . . . . .	90
7.3 Approximate Evaluation of Source Volume Integrals . . . . .	92
7.4 Weak-Field Approximations for Energy Flux and Energy Density . . . . .	94
7.5 Linear Mass Quadrupole Oscillator . . . . .	95
7.6 Radiation from a Spinning Rod . . . . .	97
7.7 Further Remarks on the Weak-Field Solutions . . . . .	98
7.8 Exact Cylindrical Wave Solutions . . . . .	99
7.9 Interaction of a Particle with Cylindrical Gravitational Waves. . . . .	102
7.10 Exact Plane-Wave Solutions. . . . .	105
7.11 Initial-Value Formulation of the Radiation Problem. . . . .	107
7.12 Time-Symmetric Solution With Positive Energy. . . . .	110
7.13 Conditions on the Differentiability and Continuity of Manifolds . . . . .	113
7.14 Six-Dimensional Treatment of Gravitational Radiation . . . . .	113
7.15 Other Petrov Class II Wave Solutions . . . . .	119
<b>8. Detection and Generation of Gravitational Waves</b>	
8.1 Detection . . . . .	124
8.2 Mass Quadrupole Detector . . . . .	126
8.3 Interaction of a Crystal with a Gravitational Wave . . . . .	131
8.4 Rotations Induced by Gravitational Radiation . . . . .	138
8.5 Generation of Gravitational Waves. . . . .	140
8.6 Other Radiation Experiments . . . . .	144
<b>9. Selected Topics in General Relativity</b>	
9.1 Unified Field Theories . . . . .	146
9.2 Equations of Motion . . . . .	153
9.3 Mach's Principle . . . . .	157
9.4 Remarks on Cosmology . . . . .	162
9.5 Hamiltonian Formulation . . . . .	167
9.6 Remarks on Quantization of General Relativity. . . . .	184
9.7 Spinors in General Relativity . . . . .	186
<b>Exercises.</b> . . . .	191
<b>Index</b> . . . . .	194
