

CONTENTS

| | |
|---|----|
| <i>Preface</i> | V |
| Section I – PHYSICAL OPTICS | |
| <i>Chapter 1. Fresnel and Fraunhofer diffraction</i> | 3 |
| 1.1. Introduction | 3 |
| 1.2. Wave equations and waves | 5 |
| 1.2.1. Wave functions | 5 |
| 1.2.2. Electromagnetic waves | 6 |
| 1.2.3. Particle waves | 7 |
| 1.3. Superposition and coherence | 8 |
| 1.3.1. Superposition | 8 |
| 1.3.2. Independent point sources | 9 |
| 1.4. Huygen's principle | 11 |
| 1.4.1. Kirchhoff's formulation | 11 |
| 1.4.2. Application of the Kirchhoff formula | 12 |
| 1.5. Scattering theory approach | 13 |
| 1.5.1. Integral form of wave equation | 13 |
| 1.5.2. Born series | 14 |
| 1.6. Reciprocity | 16 |
| 1.7. Fresnel diffraction | 16 |
| 1.7.1. Small angle approximation | 16 |
| 1.7.2. Fresnel integrals | 17 |
| 1.7.3. Periodic objects – “Fourier images” | 19 |
| 1.8. Fraunhofer diffraction | 21 |
| Problems | 24 |
| | |
| <i>Chapter 2. Fourier transforms and convolutions</i> | 25 |
| 2.1. Preliminaries | 25 |
| 2.1.1. Delta-functions and discontinuities | 25 |
| 2.1.2. Convolutions | 26 |
| 2.1.3. Examples of convolutions | 27 |
| 2.2. Fourier transforms: general | 30 |
| 2.2.1. Definitions | 30 |

CONTENTS

vii

| | |
|---|----|
| 2.2.2. Properties of Fourier transforms | 31 |
| 2.2.3. Multiplication and convolution | 33 |
| 2.2.4. Space and time | 34 |
| 2.3. Fourier transforms and diffraction: examples | 35 |
| 2.3.1. Point source or point aperture | 35 |
| 2.3.2. A plane wave: the inverse of 2.3.1. | 36 |
| 2.3.3. Translation of an object | 36 |
| 2.3.4. Slit function | 36 |
| 2.3.5. Slit function-alternative | 37 |
| 2.3.6. Straight edge | 37 |
| 2.3.7. Rectangular aperture | 39 |
| 2.3.8. Circular aperture | 39 |
| 2.3.9. Two very narrow slits | 40 |
| 2.3.10. Two slits of appreciable width | 41 |
| 2.3.11. Finite wave train | 41 |
| 2.3.12. Periodic array of narrow slits | 42 |
| 2.3.13. Arbitrary periodic function | 43 |
| 2.3.14. Diffraction grating: thin slits | 44 |
| 2.3.15. Diffraction grating: general | 45 |
| 2.3.16. Gaussian function | 46 |
| 2.3.17. Row of circular holes | 47 |
| 2.3.18. Complementary objects – Babinet’s principle | 48 |
| 2.3.19. Total intensities: Parseval’s theorem | 49 |
| Problems | 49 |

| | |
|---|----|
| <i>Chapter 3. Imaging and diffraction</i> | 51 |
| 3.1. Wave theory of imaging | 51 |
| 3.1.1. Coherent wave optics | 51 |
| 3.1.2. Incoherent wave imaging | 54 |
| 3.2. Abbe theory | 55 |
| 3.3. Small angle approximation | 56 |
| 3.4. Phase contrast | 59 |
| 3.4.1. Phase and amplitude objects | 59 |
| 3.4.2. Out-of-focus contrast | 60 |
| 3.4.3. Aperture limitation | 62 |
| 3.4.4. Zernike phase contrast | 62 |
| 3.5. Multi-component systems | 63 |
| Problems | 66 |

Section II – KINEMATICAL DIFFRACTION

| | |
|---|----|
| <i>Chapter 4. Radiations and their scattering by matter</i> | 71 |
| 4.1. X-rays | 71 |
| 4.1.1. X-ray sources | 71 |
| 4.1.2. Scattering by electrons | 71 |

| | |
|---|-----|
| 4.1.3. Scattering by atoms | 73 |
| 4.1.4. Dispersion corrections | 74 |
| 4.2. Electrons | 75 |
| 4.2.1. Sources of electrons | 75 |
| 4.2.2. Atom scattering amplitudes | 76 |
| 4.2.3. Phase object approximation | 77 |
| 4.2.4. Failure of first Born approximation | 79 |
| 4.2.5. "Absorption" effects | 80 |
| 4.3. Neutrons | 82 |
| 4.3.1. Atomic scattering factors | 82 |
| 4.3.2. Nuclear spin scattering | 83 |
| 4.3.3. Isotopic disorder | 84 |
| 4.3.4. Thermal and magnetic scattering | 85 |
| Problems | 85 |
| | |
| <i>Chapter 5. Scattering from assemblies of atoms</i> | 87 |
| 5.1. The kinematical approximation | 87 |
| 5.2. Real and reciprocal space | 89 |
| 5.2.1. Reciprocal space distribution | 89 |
| 5.2.2. The reciprocal lattice | 90 |
| 5.2.3. Friedel's law and the phase problem | 91 |
| 5.3. The generalized Patterson function | 92 |
| 5.4. Examples of correlation functions | 95 |
| 5.4.1. Finite volume limitations | 95 |
| 5.4.2. Finite crystals | 96 |
| 5.5. Correlation in space and time | 98 |
| 5.5.1. Four-dimensional Patterson | 98 |
| 5.5.2. Special cases | 99 |
| 5.5.3. Ideal monatomic gas or liquid | 100 |
| 5.5.4. Real monatomic gases and liquids | 103 |
| 5.5.5. The hydrogen atom | 105 |
| 5.6. Diffraction geometry and intensities | 106 |
| 5.7. Practical considerations | 108 |
| 5.7.1. Finite sources and detectors | 108 |
| 5.7.2. Wavelength spread | 110 |
| 5.7.3. Integrated intensities | 111 |
| 5.8. Sections and projections | 112 |
| Problems | 114 |
| | |
| <i>Chapter 6. Diffraction from crystals</i> | 115 |
| 6.1. Ideal crystals | 115 |
| 6.2. Diffraction geometry | 118 |
| 6.2.1. Laue and Bragg diffraction conditions | 118 |
| 6.2.2. Shape transforms | 119 |
| 6.2.3. Special cases for electron diffraction | 120 |

| | |
|--|-----|
| 6.3. Crystal structure analysis | 124 |
| 6.3.1. The phase problem | 124 |
| 6.3.2. Supplementary information | 125 |
| 6.4. Structure analysis methods | 126 |
| 6.4.1. Trial and error | 126 |
| 6.4.2. Patterson function | 127 |
| 6.4.3. Optical analogues | 128 |
| 6.4.4. Other methods | 129 |
| 6.5. Neutron diffraction structure analysis | 130 |
| 6.5.1. Nuclear scattering | 130 |
| 6.5.2. Magnetic scattering | 131 |
| 6.6. Electron diffraction structure analysis | 132 |
| Problems | 134 |

Chapter 7. Diffraction from imperfect crystals 137

| | |
|---|-----|
| 7.1. Formulation of the diffraction problem | 137 |
| 7.1.1. Types of defects | 137 |
| 7.1.2. General diffraction formulation | 138 |
| 7.2. Patterson function approach | 139 |
| 7.2.1. Patterson with an average periodic structure | 139 |
| 7.2.2. Patterson function with no average structure | 141 |
| 7.3. Deviations from an average lattice | 142 |
| 7.3.1. Random vacancies: no relaxation | 142 |
| 7.3.2. Clustered vacancies | 144 |
| 7.3.3. Lattice relaxation | 146 |
| 7.3.4. Thermal vibrations – Einstein model | 148 |
| 7.4. Imperfect crystals with no average lattice | 150 |
| 7.4.1. Uneven separation of lattice planes | 150 |
| 7.4.2. Disordered orientations | 152 |
| Problems | 155 |

Section III – DYNAMICAL SCATTERING

Chapter 8. Diffraction by perfect crystals 159

| | |
|---|-----|
| 8.1. Multiple coherent scattering | 159 |
| 8.2. Theoretical approaches | 160 |
| 8.3. Bethe theory | 162 |
| 8.3.1. The dispersion equations | 162 |
| 8.3.2. Solutions of the equations | 164 |
| 8.3.3. Boundary conditions | 165 |
| 8.4. Two-beam approximation | 167 |
| 8.4.1. Bloch waves and dispersion surfaces | 167 |
| 8.4.2. Conduction electrons – energy representation | 169 |
| 8.4.3. X-ray diffraction; polarization | 170 |

CONTENTS

| | |
|--|-----|
| 8.5. The Laue (transmission) case | 170 |
| 8.5.1. Electron diffraction for a thin crystal | 170 |
| 8.5.2. Small angle approximation | 173 |
| 8.5.3. Laue case with absorption | 174 |
| 8.6. Bethe potentials | 174 |
| 8.7. The Bragg case | 176 |
| | |
| <i>Chapter 9. Dynamical diffraction effects</i> | 181 |
| 9.1. Thickness fringes and rocking curves – electron diffraction | 181 |
| 9.1.1. Intensity formulas | 181 |
| 9.1.2. Real space picture | 181 |
| 9.1.3. Rocking curves | 183 |
| 9.1.4. Extinction contours | 183 |
| 9.1.5. Convergent beam diffraction | 185 |
| 9.1.6. Diffraction and imaging of crystal wedges | 187 |
| 9.1.7. Absorption effects for wedges | 189 |
| 9.1. Dynamical effects of X-ray and neutron diffraction | 191 |
| 9.2.1. Techniques for X-ray diffraction | 191 |
| 9.2.2. Energy flow | 194 |
| 9.2.3. Dispersion surface picture | 195 |
| 9.2.4. Neutron diffraction | 196 |
| 9.3. Borrmann effect | 197 |
| Problems | 199 |
| | |
| <i>Chapter 10. Extension to many beams</i> | 201 |
| 10.1. Dynamical n -beam diffraction | 201 |
| 10.2. Extension of Bethe theory – transmission | 203 |
| 10.2.1. Matrix formulation | 203 |
| 10.2.2. Small angle approximation | 204 |
| 10.2.3. Bloch waves and boundary conditions | 205 |
| 10.2.4. The scattering matrix | 207 |
| 10.3. The Darwin-type approach | 210 |
| 10.4. Special cases – beam reduction | 212 |
| 10.5. Computing methods | 214 |
| 10.6. Column approximation | 218 |
| Problems | 219 |
| | |
| <i>Chapter 11. The “physical optics” approach</i> | 221 |
| 11.1. Propagation of electrons in crystals | 221 |
| 11.1.1. Transmission through thin slices | 221 |
| 11.1.2. Three-dimensional objects | 223 |
| 11.1.3. Diffraction by a crystal | 224 |
| 11.1.4. General expression in terms of excitation errors | 226 |

CONTENTS

xi

| | |
|---|-----|
| 11.2. Multiple-scattering series | 227 |
| 11.2.1. Zero-order scattering | 227 |
| 11.2.2. Single scattering – kinematical approximation | 228 |
| 11.2.3. Multiple scattering | 229 |
| 11.3. General double-summation solution | 230 |
| 11.3.1. General series solution | 230 |
| 11.3.2. Phase grating approximation | 232 |
| 11.4. Computing methods | 234 |
| 11.4.1. “Slice method” calculations | 234 |
| 11.4.2. Steps in a computation | 235 |
| 11.4.3. Possible errors | 237 |
| 11.4.4. Consistency tests | 237 |
| 11.4.5. One-dimensional calculations | 238 |
| 11.5. Intensities from non-periodic objects | 239 |
| Problems | 241 |

Section IV – APPLICATIONS TO SELECTED TOPICS

| | |
|--|-----|
| <i>Chapter 12. Diffuse scattering and absorption effects</i> | 245 |
| 12.1. Thermal diffuse scattering | 245 |
| 12.1.1. Phonons and vibrational waves | 245 |
| 12.1.2. Scattering for a longitudinal wave | 246 |
| 12.1.3. Diffuse scattering component | 247 |
| 12.1.4. Dispersion curves | 249 |
| 12.1.5. Three-dimensional generalizations | 250 |
| 12.2. Static atom displacements | 250 |
| 12.2.1. Relaxation around point defects | 250 |
| 12.2.2. Diffraction intensities for displaced atoms | 251 |
| 12.2.3. The Bragg peaks | 253 |
| 12.2.4. The diffuse scattering | 254 |
| 12.3. Electron excitations | 257 |
| 12.3.1. Inelastic X-ray scattering | 257 |
| 12.3.2. Electron excitation by electrons – plasmons | 258 |
| 12.3.3. Single-electron excitations | 260 |
| 12.4. Dynamical effects in diffuse scattering | 262 |
| 12.4.1. Scattering and re-scattering | 262 |
| 12.4.2. Coherent and incoherent scattering | 264 |
| 12.4.3. Analysis of diffuse scattering | 266 |
| 12.5. Absorption effects | 267 |
| 12.5.1. The nature of absorption parameters | 267 |
| 12.5.2. Absorption of X-rays and neutrons | 268 |
| 12.5.3. “Absorption” for electrons | 268 |
| 12.5.4. Absorption due to the thermal vibrations | 270 |
| 12.5.5. Absorption from electron excitations | 271 |
| 12.5.6. Values of absorption coefficients | 272 |

| | |
|--|-----|
| <i>Chapter 13. Electron microscope imaging</i> | 275 |
| 13.1. Optics of the electron microscope | 275 |
| 13.1.1. Conventional transmission electron microscopy | 275 |
| 13.1.2. Scanning transmission electron microscopy | 277 |
| 13.2. Image formation | 278 |
| 13.3. Contrast for thin specimens | 280 |
| 13.3.1. Phase object approximation | 280 |
| 13.3.2. The absorption function | 282 |
| 13.3.3. Weak-phase object approximation | 283 |
| 13.3.4. Dark field images | 286 |
| 13.4. The imaging of crystal structures | 287 |
| 13.4.1. Imaging of thin crystals | 287 |
| 13.4.2. Calculation of images of crystals | 292 |
| 13.4.3. Lattice fringes for thick crystals | 293 |
| 13.4.4. Crystal imaging without lattice resolution | 296 |
| 13.5. High voltage microscopy | 297 |
| Problems | 298 |
| | |
| <i>Chapter 14. K-line patterns and channelling</i> | 299 |
| 14.1. Kossel lines | 299 |
| 14.1.1. Geometry of Kossel lines | 299 |
| 14.1.2. Dynamical theory of Kossel intensities | 300 |
| 14.1.3. Kossel lines with limited resolution | 302 |
| 14.2. Kikuchi lines | 305 |
| 14.3. External sources of divergent radiation | 309 |
| 14.4. Information from K-line patterns | 311 |
| 14.5. Channelling | 313 |
| 14.6. Secondary radiations | 315 |
| | |
| <i>Chapter 15. Application of dynamical effects in single crystals</i> | 319 |
| 15.1. Dependence of dynamical effects on crystal parameters | 319 |
| 15.2. X-ray interferometry | 320 |
| 15.3. <i>n</i> -beam and 2-beam dynamical diffraction | 321 |
| 15.4. The determination of structure amplitudes from thickness fringes | 325 |
| 15.5. Structure amplitudes from rocking curves | 327 |
| 15.6. Relativistic effects | 330 |
| 15.7. Absorptions and temperature effects | 332 |
| 15.8. The determination of crystal symmetries | 333 |
| | |
| <i>Chapter 16. Mosaic crystals and polycrystalline materials</i> | 337 |
| 16.1. General | 337 |
| 16.2. Mosaic crystals | 338 |
| 16.2.1. The mosaic crystal model | 338 |

| | |
|---|---------|
| 16.2.2. Kinematical integrated intensities | 338 |
| 16.2.3. Extinction effects | 340 |
| 16.2.4. Dynamical electron diffraction intensities | 341 |
| 16.3. Polycrystalline material | 342 |
| 16.3.1. Idealized models | 342 |
| 16.3.2. Kinematical diffraction intensities | 344 |
| 16.3.3. Line profile analysis | 345 |
| 16.3.4. Dynamical diffraction intensities | 346 |
| 16.3.5. n -beam diffraction effects | 349 |
| <i>Chapter 17. Ordering of atoms in crystals</i> | 351 |
| 17.1. The nature and description of disordered states | 351 |
| 17.2. Order parameters | 353 |
| 17.2.1. Short range order | 353 |
| 17.2.2. Long-range order | 355 |
| 17.3. Patterson function | 355 |
| 17.4. Size effects | 356 |
| 17.5. Kinematical diffraction | 358 |
| 17.5.1. Diffraction with ordering only | 358 |
| 17.5.2. Diffraction with ordering and size effects | 361 |
| 17.6. Relationship with ordering energies | 365 |
| 17.7. Dynamical scattering from disordered crystals | 367 |
| 17.7.1. Dynamical effects in diffuse scattering | 367 |
| 17.7.2. Calculations of diffuse scattering | 367 |
| 17.7.3. Strong scattering and multi-atom correlations | 369 |
| 17.8. Out-of-phase domains | 370 |
| 17.8.1. Ordered out-of-phase superlattices | 370 |
| 17.8.2. Out-of-phase domains in disordered alloys | 372 |
| Problems | 373 |
| <i>Chapter 18. Extended defects</i> | 375 |
| 18.1. Introduction | 375 |
| 18.2. Stacking faults – statistical, kinematical theory | 376 |
| 18.2.1. Patterson method for a simple case | 376 |
| 18.2.2. A general treatment | 380 |
| 18.2.3. Faults in close-packed structures | 382 |
| 18.3. Dynamical diffraction by stacking faults | 384 |
| 18.4. Dislocations | 387 |
| 18.4.1. Diffraction effects | 387 |
| 18.4.2. The imaging of dislocations | 388 |
| 18.4.3. Averaging over angles of incidence | 389 |
| 18.4.4. n -beam diffraction effects | 391 |
| <i>References</i> | 393 |
| <i>Index</i> | 405 |
