|  |            |
|--|------------|
| <b>Introduction</b> . . . . .  | <b>vii</b> |
| <b>Acknowledgements</b> . . . . .  | <b>ix</b>  |
| <b>Chapter 1 The laws of refraction and reflection</b> . . . . .           | <b>1</b>   |
| <b>Chapter 2 The zero-distance phase front</b> . . . . .                   | <b>11</b>  |
| 2.1 Definition and general derivation. . . . .                             | 11         |
| 2.2 Refraction in a circular interface . . . . .                           | 14         |
| 2.3 Reflection in a circle . . . . .                                       | 18         |
| 2.4 Reflection in a general curve . . . . .                                | 20         |
| 2.5 Geometrical constructions . . . . .                                    | 23         |
| 2.6 Caustic approximations . . . . .                                       | 29         |
| <b>Chapter 3 The inversion theorem of Damien</b> . . . . .                 | <b>36</b>  |
| 3.1 A geometrical method of optical design . . . . .                       | 39         |
| 3.2 Lens bending. . . . .  | 44         |
| 3.3 Extended sources and images . . . . .                                  | 44         |
| <b>Chapter 4 The mechanical description of optical surfaces.</b> . . . . . | <b>49</b>  |
| 4.1 The co-involution of two caustics. . . . .                             | 49         |
| 4.2 The general two-surface reflector system . . . . .                     | 55         |
| 4.3 Co-involution by refraction. . . . .                                   | 57         |
| <b>Chapter 5 Ray-tracing in non-uniform media</b> . . . . .                | <b>59</b>  |
| 5.1 The ray-tracing equations . . . . .                                    | 59         |
| 5.2 Expansions of the ray equations . . . . .                              | 65         |
| <b>Chapter 6 Rays in linear and cylindrical media</b> . . . . .            | <b>70</b>  |
| 6.1 The linear stratified medium . . . . .                                 | 71         |
| 6.2 The cylindrical non-uniform medium . . . . .                           | 73         |
| <b>Chapter 7 Rays in spherical and axisymmetric media</b> . . . . .        | <b>93</b>  |
| 7.1 The spherically symmetric medium . . . . .                             | 93         |
| 7.2 The spherical symmetric lenses . . . . .                               | 95         |
| 7.3 Transformations of the spherical lenses. . . . .                       | 103        |
| 7.4 Rays in an axisymmetric coordinate system . . . . .                    | 110        |
| 7.5 Rays in an angular variable medium . . . . .                           | 118        |

|  |            |
|--|------------|
| <b>Chapter 8 Geodesics, rays and trajectories.</b>           | <b>124</b> |
| 8.1 Geodesic lenses  | 124        |
| 8.2 Rays and trajectories                                    | 132        |
| <b>Appendix I Curves and their formulae</b>                  | <b>135</b> |
| <b>Appendix II Derived curves</b>                            | <b>139</b> |
| <b>Appendix III Applications of Abel's integral</b>          | <b>141</b> |
| <b>Appendix IV The radiation patterns of Luneburg lenses</b> | <b>144</b> |
