

TABLE OF CONTENTS

PART I.—GEOMETRICAL OPTICS

CHAPTER I

THE FUNDAMENTAL LAWS

ART.	PAGE
1. Direct Experiment.....	I
2. Law of the Extreme Path.....	6
3. Law of Malus.....	11

CHAPTER II

GEOMETRICAL THEORY OF OPTICAL IMAGES

1. The Concept of Optical Images	14
2. General Formulæ for Images	15
3. Images Formed by Coaxial Surfaces	17
4. Construction of Conjugate Points.....	24
5. Classification of the Different Kinds of Optical Systems.....	25
6. Telescopic Systems.....	26
7. Combinations of Systems.....	28

CHAPTER III

PHYSICAL CONDITIONS FOR IMAGE FORMATION

1. Refraction at a Spherical Surface.....	32
2. Reflection at a Spherical Surface.....	36
3. Lenses.....	40
4. Thin Lenses.....	42
5. Experimental Determination of Focal Length.....	44
6. Astigmatic Systems.....	46
7. Means of Widening the Limits of Image Formation.....	52
8. Spherical Aberration.....	54

ART.	PAGE
9. The Law of Sines.....	58
10. Images of Large Surfaces by Narrow Beams.....	63
11. Chromatic Aberration of Dioptric Systems.....	66

CHAPTER IV

APERTURES AND THE EFFECTS DEPENDING UPON THEM

1. Entrance- and Exit-Pupils.....	73
2. Telecentric Systems.....	75
3. Field of View.....	76
4. The Fundamental Laws of Photometry.....	77
5. The Intensity of Radiation and the Intensity of Illumination of Optical Surfaces.....	84
6. Subjective Brightness of Optical Images.....	86
7. The Brightness of Point Sources.....	90
8. The Effect of the Aperture upon the Resolving Power of Optical Instruments.....	91

CHAPTER V

OPTICAL INSTRUMENTS

1. Photographic Systems.....	93
2. Simple Magnifying-glasses.....	95
3. The Microscope.....	97
4. The Astronomical Telescope.....	107
5. The Opera Glass.....	109
6. The Terrestrial Telescope.....	112
7. The Zeiss Binocular.....	112
8. The Reflecting Telescope.....	113

PART II.—PHYSICAL OPTICS

SECTION I

GENERAL PROPERTIES OF LIGHT

CHAPTER I

THE VELOCITY OF LIGHT

1. Römer's Method.....	114
2. Bradley's Method.....	115

TABLE OF CONTENTS

XV

ART.	PAGE
3. Fizeau's Method.....	116
4. Foucault's Method.....	118
5. Dependence of the Velocity of Light upon the Medium and the Color.....	120
6. The Velocity of a Group of Waves.....	121

CHAPTER II

INTERFERENCE OF LIGHT

1. General Considerations.....	124
2. Hypotheses as to the Nature of Light.....	124
3. Fresnel's Mirrors.....	130
4. Modifications of the Fresnel Mirrors.....	134
5. Newton's Rings and the Colors of Thin Plates.....	136
6. Achromatic Interference Bands.....	144
7. The Interferometer.....	144
8. Interference with Large Difference of Path.....	148
9. Stationary Waves.....	154
10. Photography in Natural Colors.....	156

CHAPTER III

HUYGENS' PRINCIPLE

1. Huygens' Principle as first Conceived.....	159
2. Fresnel's Improvement of Huygens' Principle.....	162
3. The Differential Equation of the Light Disturbance.....	169
4. A Mathematical Theorem.....	172
5. Two General Equations.....	174
6. Rigorous Formulation of Huygens' Principle.....	179

CHAPTER IV

DIFFRACTION OF LIGHT

1. General Treatment of Diffraction Phenomena.....	185
2. Fresnel's Diffraction Phenomena.....	188
3. Fresnel's Integrals.....	188
4. Diffraction by a Straight Edge.....	192
5. Diffraction through a Narrow Slit.....	198
6. Diffraction by a Narrow Screen.....	201
7. Rigorous Treatment of Diffraction by a Straight Edge.....	203

ART.	PAGE
8. Fraunhofer's Diffraction Phenomena.....	213
9. Diffraction through a Rectangular Opening.....	214
10. Diffraction through a Rhomboid.....	217
11. Diffraction through a Slit.....	217
12. Diffraction Openings of any Form.....	219
13. Several Diffraction Openings of like Form and Orientation.....	219
14. Babinet's Theorem.....	221
15. The Diffraction Grating.....	222
16. The Concave Grating.....	225
17. Focal Properties of a Plane Grating.....	227
18. Resolving Power of a Grating.....	227
19. Michelson's Echelon.....	228
20. The Resolving Power of a Prism.....	233
21. Limit of Resolution of a Telescope.....	235
22. The Limit of Resolution of the Human Eye.....	236
23. The Limit of Resolution of the Microscope.....	236

CHAPTER V

POLARIZATION

1. Polarization by Double Refraction.....	242
2. The Nicol Prism.....	244
3. Other Means of Producing Polarized Light.....	246
4. Interference of Polarized Light.....	247
5. Mathematical Discussion of Polarized Light.....	247
6. Stationary Waves Produced by Obliquely Incident Polarized Light.....	251
7. Position of the Determinative Vector in Crystals.....	252
8. Natural and Partially Polarized Light.....	253
9. Experimental Investigation of Elliptically Polarized Light.....	255

SECTION II

OPTICAL PROPERTIES OF BODIES

CHAPTER I

THEORY OF LIGHT

1. Mechanical Theory.....	259
2. Electromagnetic Theory.....	260
3. The Definition of the Electric and of the Magnetic Force.....	262

TABLE OF CONTENTS

xvii

ART.	PAGE
4. Definition of the Electric Current in the Electrostatic and the Electromagnetic Systems.....	263
5. Definition of the Magnetic Current.....	265
6. The Ether.....	267
7. Isotropic Dielectrics.....	268
8. The Boundary Conditions.....	271
9. The Energy of the Electromagnetic Field.....	272
10. The Rays of Light as the Lines of Energy Flow.....	273

CHAPTER II

TRANSPARENT ISOTROPIC MEDIA

1. The Velocity of Light.....	274
2. The Transverse Nature of Plane Waves.....	278
3. Reflection and Refraction at the Boundary between two Transparent Isotropic Media.....	278
4. Perpendicular Incidence; Stationary Waves.....	284
5. Polarization of Natural Light by Passage through a Pile of Plates.....	285
6. Experimental Verification of the Theory.....	286
7. Elliptic Polarization of the Reflected Light and the Surface or Transition Layer.....	287
8. Total Reflection.....	295
9. Penetration of the Light into the Second Medium in the Case of Total Reflection.....	299
10. Application of Total Reflection to the Determination of Index of Refraction.....	301
11. The Intensity of Light in Newton's Rings.....	302
12. Non-homogeneous Media; Curved Rays.....	306

CHAPTER III

OPTICAL PROPERTIES OF TRANSPARENT CRYSTALS

1. Differential Equations and Boundary Conditions.....	308
2. Light-vectors and Light-rays.....	311
3. Fresnel's Law for the Velocity of Light.....	314
4. The Directions of the Vibrations.....	316
5. The Normal Surface.....	317
6. Geometrical Construction of the Wave Surface and of the Direction of Vibration.....	320

TABLE OF CONTENTS

ART.	PAGE
7. Uniaxial Crystals.....	323
8. Determination of the Direction of the Ray from the Direction of the Wave Normal.	324
9. The Ray Surface.....	326
10. Conical Refraction.....	331
11. Passage of Light through Plates and Prisms of Crystal.....	335
12. Total Reflection at the Surface of Crystalline Plates.....	339
13. Partial Reflection at the Surface of a Crystalline Plate.....	344
14. Interference Phenomena Produced by Crystalline Plates in Polarized Light when the Incidence is Normal.....	344
15. Interference Phenomena in Crystalline Plates in Convergent Polarized Light.....	349

CHAPTER IV

ABSORBING MEDIA

1. Electromagnetic Theory.....	358
2. Metallic Reflection.....	361
3. The Optical Constants of the Metals.....	366
4. Absorbing Crystals.....	368
5. Interference Phenomena in Absorbing Biaxial Crystals.....	374
6. Interference Phenomena in Absorbing Uniaxial Crystals.....	380

CHAPTER V

DISPERSION

1. Theoretical Considerations.....	382
2. Normal Dispersion.....	388
3. Anomalous Dispersion.....	392
4. Dispersion of the Metals.....	396

CHAPTER VI

OPTICALLY ACTIVE SUBSTANCES

1. General Considerations.....	400
2. Isotropic Media.....	401
3. Rotation of the Plane of Polarization.....	404
4. Crystals.....	408
5. Rotary Dispersion.....	412
6. Absorbing Active Substances.....	415

TABLE OF CONTENTS

xix

CHAPTER VII

MAGNETICALLY ACTIVE SUBSTANCES

A. Hypothesis of Molecular Currents

ART.	PAGE
1. General Considerations.....	418
2. Deduction of the Differential Equations.....	420
3. The Magnetic Rotation of the Plane of Polarization.....	426
4. Dispersion in Magnetic Rotation of the Plane of Polarization..	429
5. Direction of Magnetization Perpendicular to the Ray.....	433

B. Hypothesis of the Hall Effect

1. General Considerations...	433
2. Deduction of the Differential Equations.....	435
3. Rays Parallel to the Direction of Magnetization.....	437
4. Dispersion in the Magnetic Rotation of the Plane of Polarization.	438
5. The Impressed Period Close to a Natural Period	440
6. Rays Perpendicular to the Direction of Magnetization.....	443
7. The Impressed Period in the Neighborhood of a Natural Period.	444
8. The Zeeman Effect.....	446
9. The Magneto-optical Properties of Iron, Nickel, and Cobalt...	449
10. The Effects of the Magnetic Field of the Ray of Light	452

CHAPTER VIII

BODIES IN MOTION

1. General Considerations.....	457
2. The Differential Equations of the Electromagnetic Field Referred to a Fixed System of Coordinates.....	457
3. The Velocity of Light in Moving Media.....	465
4. The Differential Equations and the Boundary Conditions Referred to a Moving System of Coordinates which is Fixed with Reference to the Moving Medium.....	467
5. The Determination of the Direction of the Ray by Huygens' Principle.....	470
6. The Absolute Time Replaced by a Time which is a Function of the Coordinates.....	471
7. The Configuration of the Rays Independent of the Motion....	473
8. The Earth as a Moving System.....	474
9. The Aberration of Light.....	475
10. Fizeau's Experiment with Polarized Light.....	477
11. Michelson's Interference Experiment	478

PART III.—RADIATION

CHAPTER I

ENERGY OF RADIATION

ART.	PAGE
1. Emissive Power.....	483
2. Intensity of Radiation of a Surface.....	484
3. The Mechanical Equivalent of the Unit of Light.....	485
4. The Radiation from the Sun.....	487
5. The Efficiency of a Source of Light.....	487
6. The Pressure of Radiation.....	488
7. Prevost's Theory of Exchanges.....	491

CHAPTER II

APPLICATION OF THE SECOND LAW OF THERMODYNAMICS TO
PURE TEMPERATURE RADIATION

1. The Two Laws of Thermodynamics.....	493
2. Temperature Radiation and Luminescence.....	494
3. The Emissive Power of a Perfect Reflector or of a Perfectly Transparent Body is Zero.....	495
4. Kirchhoff's Law of Emission and Absorption.....	496
5. Consequences of Kirchhoff's Law.....	499
6. The Dependence of the Intensity of Radiation upon the Index of Refraction of the Surrounding Medium.....	502
7. The Sine Law in the Formation of Optical Images of Surface Elements.....	505
8. Absolute Temperature.....	506
9. Entropy.....	510
10. General Equations of Thermodynamics.....	511
11. The Dependence of the Total Radiation of a Black upon its Ab- solute Temperature.....	512
12. The Temperature of the Sun Calculated from its Total Emission.....	515
13. The Effect of Change in Temperature upon the Spectrum of a Black Body.....	516
14. The Temperature of the Sun Determined from the Distribution of Energy in the Solar Spectrum.....	523
15. The Distribution of the Energy in the Spectrum of a Black Body.....	524

TABLE OF CONTENTS

xxi

CHAPTER III

INCANDESCENT VAPORS AND GASES

ART.	PAGE
1. Distinction between Temperature Radiation and Luminescence.	528
2. The Ion-hypothesis	529
3. The Damping of Ionic Vibrations because of Radiation.....	534
4. The Radiation of the Ions under the Influence of External Radiation	535
5. Fluorescence.....	536
6. The Broadening of the Spectral Lines Due to Motion in the Line of Sight.....	537
7. Other Causes of the Broadening of the Spectral Lines	541
INDEX.....	543
