NOTATION AND SYMBOLS	xiii
INTRODUCTION	1
1. LINEAR OPTICS OF ATOMIC GASES	7
1.1. The Nonresonance Linear Atomic Susceptibility	8
1.1.1. Introduction	8
1.1.2. The Diagrammatic Technique for Linear Atomic Susceptibility	10
1.1.3. Properties of Linear Atomic Susceptibility	11
1.1.4. The Quadratic AC Stark Effect in a Monochromatic Field	12
1.1.5. Linear Scattering of Light	13
1.1.6. Calculation of the Linear Atomic Susceptibility	15
1.1.7. Conclusion	17
1.2. The Resonance Linear Atomic Susceptibility	17
1.2.1. Introduction	17
1.2.2. The Frequency Dependence of $\chi^{(1)}(\omega; \omega)$ in the Vicinity of Resonances	18
1.2.3. One-Photon Ionization of an Atom	19
1.2.4. Phenomena that Determine the Resonance Width	20
1.2.4.1. <i>Natural broadening</i>	20
1.2.4.2. <i>Doppler broadening</i>	21
1.2.4.3. <i>Ionization broadening</i>	21
1.2.4.4. <i>Quadratic AC stark broadening in a pulsed field</i>	22
1.2.4.5. <i>The linear stark effect and linear stark broadening in a strong electromagnetic field</i>	22
1.2.4.6. <i>Collision (impact) broadening</i>	22
1.2.4.7. <i>The nonmonochromaticity of laser radiation</i>	23
	vii

1.2.5.	Resonance Spontaneous Raman Scattering and Hot Luminescence	23
1.2.6.	Conclusion	24
1.3.	Transmission and Reflection of Light at Normal Incidence to an Interface	25
1.3.1.	Introduction	25
1.3.2.	Maxwell's Equation in the Unperturbed-Field Approximation	26
1.3.3.	The Wave of Linear Polarization of a Medium	27
1.3.4.	The Dielectric Constant of a Linear Medium	29
1.3.5.	Linear Reflection of Light from a Medium	30
1.3.6.	Conclusion	33
1.4.	Linear Absorption of Light	33
1.4.1.	Introduction	33
1.4.2.	The Absorption Coefficient	34
1.4.3.	Conclusion	35
1.5.	Refraction of an Electromagnetic Wave Falling at an Angle on the Interface between Two Media	35
1.5.1.	Introduction	35
1.5.2.	Maxwell's Equation in the Unperturbed-Field Approximation	36
1.5.3.	The Turning of the Wave Vector in a Medium	37
1.5.4.	The Falling of a Spatially Inhomogeneous Light Beam on a Linear Medium	39
1.5.5.	Conclusion	41
1.6.	Polarization of an Electromagnetic Field in a Linear Medium	41
1.6.1.	Introduction	41
1.6.2.	Parameters Characterizing an Elliptically Polarized Electromagnetic Wave	42
1.6.3.	Propagation of an Elliptically Polarized Wave in a Linear Medium	44
1.6.4.	Conclusion	45
1.7.	Conclusion	45
2.	NONLINEAR INTERACTION OF LIGHT AND ATOMS	47
2.1.	Nonlinear Atomic Susceptibilities	49
2.1.1.	Introduction	49
2.1.2.	The Diagrammatic Technique for Nonlinear Atomic Susceptibility	53

2.1.3.	Examples of Cubic Susceptibilities	55
2.1.4.	Higher-Order Nonlinear Susceptibilities	59
2.1.5.	Removal of Secular Terms in Nonresonance Nonlinear Susceptibilities	60
2.1.6.	Calculations of Nonresonance Nonlinear Susceptibilities	61
2.1.7.	Conclusion	64
2.2.	Resonance Nonlinear Atomic Susceptibilities	65
2.2.1.	Introduction	65
2.2.2.	The Effect of Level Population on Nonlinear Susceptibility	67
2.2.3.	The Physical Meaning of the Real and Imaginary Parts of Nonlinear Susceptibilities	69
2.2.4.	Conclusion	72
2.3.	Hyperpolarizability of Atomic Levels	72
2.4.	Multiphoton Excitation and Nonlinear Ionization of Atoms	74
2.4.1.	Introduction	74
2.4.2.	Conditions Necessary for Multiphoton Ionization	74
2.4.3.	Multiphoton Ionization of Atoms	75
2.4.4.	Direct Multiphoton Ionization of Atoms	79
2.4.5.	Probability of Multiphoton Excitation	81
2.5.	Conclusion	82
3.	NONLINEAR-OPTICS PHENOMENA IN ATOMIC GASES	84
3.1.	The Basics of the Theory of the Interaction of Intense Light with an Atomic Gas	85
3.1.1.	Introduction	85
3.1.2.	Simplifying Assumptions and Approximations	85
3.1.2.1.	<i>The monochromaticity of light waves</i>	85
3.1.2.2.	<i>The plane incident wavefront</i>	86
3.1.2.3.	<i>Uniform distribution of field strength over the incident wavefront</i>	86
3.1.2.4.	<i>The stationary action of the light radiation</i>	86
3.1.2.5.	<i>Polarization of the radiation</i>	87
3.1.2.6.	<i>The unperturbed-field approximation</i>	87
3.1.2.7.	<i>The absence of an interaction between the atoms</i>	87
3.1.2.8.	<i>The immobility of the atoms</i>	88
3.1.3.	The Maxwell Equations in a Nonlinear Medium	88

3.1.4.	The Phase-Matching Condition	91
3.1.5.	Conclusion	93
3.2.	Higher Optical Harmonics	94
3.2.1.	Introduction	94
3.2.2.	Classification of the Basic Processes	95
3.2.3.	The Second Harmonic of the Incident Radiation	96
3.2.4.	The Third Harmonic	98
3.2.5.	Phase Matching in a Gas	100
3.2.6.	Limiting and Competing Effects	104
	3.2.6.1. <i>One-photon absorption</i>	105
	3.2.6.2. <i>Two-photon absorption</i>	106
	3.2.6.3. <i>Multiphoton ionization of atoms</i>	109
	3.2.6.4. <i>Nonlinear variation of the refractive index</i>	112
	3.2.6.5. <i>Optical breakdown of the gas mixture by laser radiation</i>	113
3.2.7.	Excitation of the Second Harmonic in Gases in the Presence of a Constant Electric Field	114
3.2.8.	Excitation of the Second Harmonic in Gases in the Presence of a Constant Magnetic Field	115
3.2.9.	Excitation of Higher Harmonics in Gases	117
3.2.10.	The Practical Realization of Higher-Harmonic Excitation in Gases	118
3.2.11.	Excitation of Harmonics in Other Media	119
3.2.12.	Conclusion	120
3.3.	Stimulated Raman Scattering	121
3.3.1.	Introduction	121
3.3.2.	Spontaneous Raman Scattering in an Atomic Medium	122
3.3.3.	Stimulated Photon Emission	124
3.3.4.	Properties of Stimulated Raman Scattering	126
3.3.5.	Raman Frequencies in Stimulated Raman Scattering	128
3.3.6.	Linear Law of Excitation for Stimulated Raman Scattering	132
3.3.7.	Exponential Law of Excitation for Stimulated Raman Scattering	135
3.3.8.	Saturation of Stimulated Raman Scattering	137
3.3.9.	One-Photon Absorption as a Competing Process	139
3.3.10.	Excitation of Stimulated Raman Scattering by Nonmonochromatic Radiation	141
3.3.11.	Stimulated Hyper-Raman Scattering	143

3.3.12. Stimulated Raman Scattering from Excited Atomic States	146
3.3.13. Stimulated Raman Scattering in Other Media	148
3.3.14. Stimulated Raman Scattering in Nonlinear Optics and Quantum Radiophysics	150
3.3.15. Conclusion	152
3.4. Coupled Waves	153
3.4.1. Introduction	153
3.4.2. Wave Coupling in a Medium with Quadratic Nonlinearity	153
3.4.3. Four-Wave Coupling	156
3.4.4. Coherent Anti-Stokes Raman Scattering	157
3.4.5. Coherent Two-Photon Radiation	159
3.4.6. Excitation of the Wave with Sum Frequency	161
3.4.7. The Manley-Rowe Law and the Phase-Matching Conditions in Four-Wave Coupling	162
3.4.8. Tensor Properties of the Cubic Susceptibility for Four-Wave Coupling in Alkali-Atom Vapors	164
3.4.9. Conclusion	165
3.5. Nonlinear Refraction	166
3.5.1. Introduction	166
3.5.2. The Phenomenon of Nonlinear Refraction	167
3.5.3. Propagation of a Light Ray in a Nonlinear Medium	171
3.5.4. Stationary Self-Focusing of Light	172
3.5.5. The Instability of Self-Focusing of Light	175
3.5.6. The Elementary Processes That Lead to the Dependence of the Index of Refraction on the Field Strength in the Light Wave	178
3.5.7. Nonlinear Refraction in the Nonstationary Interaction of Light with the Medium	181
3.5.8. Self-Focusing of Laser Radiation in Other Media	183
3.5.9. Conclusion	183
3.6. Change of Polarization of an Intense Light Wave	184
3.6.1. Introduction	184
3.6.2. An Equation for the Nonlinear Polarization Wave	186
3.6.3. Self-Rotation of the Polarization Ellipse of an Intense Light Wave in a Medium	188
3.6.4. Induced Optical Anisotropy	190
3.6.5. Induced Dichroism and Gyrotropy	192
3.6.6. Induced Dichroism in Molecular Gases	195

3.6.7. Nonlinear Polarization Spectroscopy	195
3.6.8. Conclusion	196
3.7. Nonlinear Light Absorption	196
3.7.1. Introduction	196
3.7.2. The Two-Photon Absorption Probability	197
3.7.3. Saturation of Nonlinear Absorption	199
3.7.4. The Nonlinear Absorption Coefficient	199
3.7.5. The Relationship between the Nonlinear Absorption Coefficient and the Absorption Cross Section	202
3.7.6. Conclusion	203
3.8. Conclusion	204
CONCLUSION	205
