Chapter I. Interferences	1
1. Introduction	1
2. Thin Films	4
2.1 Interference by Transparent Thin Films. Reflectance and Transmittance of One or More Films	5
2.2 Antireflecting Thin Films	8
2.3 Methods for Increasing the Reflectance of Surfaces	14
2.4 Absorbing Thin Films	16
2.5 Interference Filters	16
2.6 Transmission Interference Filters	17
2.7 Reflection Interference Filters	19
2.8 The Turner Frustrated Total-Reflection Filter	21
2.9 Thin Films in the Infrared and Ultraviolet Regions	22
2.10 Applications of Thin Films to Artificial Satellites	29
2.11 Preparation of Thin Films	30
3. Interference Spectroscopy	31
3.1 Interference Spectroscopy Using a Fabry-Perot Interferometer Combined with a Spectrograph	32
3.2 Interference Spectroscopy Using a Fabry-Perot Interferometer Combined with a Photoelectric Detector	32
4. Interference Measurements	32
4.1 Application of Interference Measurements	38
4.2 New Wavelength Definition of the Meter	40
5. Interference Microscopy	41
5.1 Interference Microscopes in Transmitted Light	42
5.2 Interference Microscopes in Reflected Light	47
6. Intensity Interferometer	49
Chapter II. Diffraction and Image Formation	52
7. Application of the Fourier Transform to Optics	52
7.1 The Fourier Transform and the Image of a Point Source	52
7.2 Image of an Incoherent Extended Object. Fundamental Theorem	57
7.3 Fourier Transform of the Image of a Light Point Source.	62

7.4	Filtering of Spatial Frequencies by an Optical Instrument. Image of an Incoherent Periodic Object	65
7.5	Filtering of a Photograph with Incoherent Illumination .	70
7.6	Image of a Nonperiodic Incoherent Object	74
7.7	Filtering of Spatial Frequencies by an Aberrant Optical Instrument	74
7.8	Filtering of Spatial Frequencies in Coherent Illumination. Application to the Filtering of a Photograph in Coherent Light	75
8.	Interference Spectroscopy by Fourier Transformation	78
9.	Modern Gratings.	80
10.	Phase Contrast	82
11.	Coherent Light Sources: Lasers	88
Chapter III. Polarization		91
12.	Application of Thin Films to the Production of Polarizers . . .	91
13.	Dichroic Polarizers—Polaroids	93
14.	Polarized Light Applied to the Observation of Transparent Iso- tropic Objects	94
14.1	Interference Polarization Microscopes for the Study of Transparent Objects	97
14.2	Polarization Interferometers for Macroscopic Studies . .	102
