

Contents

1. <i>Introduction</i>	1
2. <i>Theory of the Nonlinear Optical Susceptibility</i>	11
2.1 Definition	11
2.2 Permutation Symmetry	14
2.3 Nonlinear Optical Processes	17
2.4 Explicit Formulae for the Nonlinear Atomic Susceptibilities ..	20
2.5 Resonant Susceptibilities	26
2.6 Resonant Processes	35
2.6.1 Nonlinear Polarisation for Quasi-Monochromatic Radiation	36
2.6.2 Adiabatic States	41
2.6.3 The ac or Optical Stark Effect	51
2.6.4 Intensity-Dependent Refractive Index	55
2.6.5 Secularity	58
2.6.6 The Vector Model	62
2.6.7 The Two-Photon Vector Model	67
2.6.8 Damping	70
2.7 Material Excitation	72
2.7.1 Spontaneous Raman Scattering	72
2.7.2 Transition Hyperpolarisabilities	75
2.7.3 Bloch Equations	77
2.8 Symmetry	82
3. <i>Propagation of Plane Waves in a Nonlinear Medium</i>	85
3.1 The Wave Equation	85
3.2 Parametric Processes	88
3.3 Nonparametric Processes	93
3.4 Coupled-Wave Equations	97
3.4.1 Biharmonic Pumping-Small Signal	98

3.4.2	Biharmonic Pumping-Large Signal	106
3.5	Noise Power	112
4.	<i>Sum Frequency and Harmonic Generation</i>	117
4.1	Background Material	117
4.2	Theory of Optimum Focussing and Phase Matching	119
4.3	The Nonlinear Medium	127
4.3.1	Nonlinear-Susceptibility Calculations	127
4.3.2	Contribution of Autoionising Transitions to the Susceptibility	135
4.3.3	Other Nonlinear Media	144
4.3.4	Higher-Order Processes	145
4.4	Phase-Matching Techniques	146
4.4.1	General Experimental Considerations	146
4.4.2	Heat-Pipe Ovens	152
4.4.3	Phase Matching Without a Buffer Gas	155
4.4.4	Group-Velocity Matching	158
4.5	Review of Experimental Results	159
4.6	Saturation and Limiting Processes	165
4.6.1	Single-Photon Absorption	165
4.6.2	Breaking of Phase Matching and Self Focussing	167
4.6.3	Two-Photon Absorption	174
4.6.4	Multiphoton Ionisation	177
4.6.5	The ac Stark Effect	181
5.	<i>Stimulated Electronic Raman Scattering</i>	187
5.1	Background Material	187
5.2	Tunable Infrared Generation	194
5.2.1	Experimental Techniques and Results	194
5.2.2	Amplified Spontaneous Emission	206
5.3	The Calculation of SERS Gain	208
5.3.1	Plane-Wave Gain Coefficient	208
5.3.2	SERS Threshold	215
5.3.3	Transient and Broad Band Pumping	220
5.4	Limiting Mechanisms	222
5.4.1	Competing Processes	223
5.4.2	Line Broadening Processes	231
5.4.3	Saturation	233
5.4.4	Limitations Due to Diffraction	238

5.5	Related Stimulated Processes	239
5.5.1	Stimulated Hyper-Raman Scattering (SHRS)	239
5.5.2	Two-Photon Emission (TPE) and Anti-Stokes Stimulated Raman Scattering (ASRS)	243
6.	<i>Raman-Resonant Four-Wave Processes</i>	251
6.1	Background Material	251
6.2	Raman-Resonant Difference Mixing	253
6.3	Phase Matching	258
6.4	Raman-Resonant Difference-Frequency Generation in Alkali Vapours	264
7.	<i>Nonlinear Optical Processes in Free Molecules</i>	271
7.1	Background Material	271
7.2	Resonance-Enhanced Harmonic Generation in Molecules	273
7.3	CO as a Nonlinear Medium	285
7.4	HCl as a Nonlinear Medium	293
7.5	Biharmonic Pumping in H ₂ Gas	296
7.6	Far Infrared (fir) Generation by Stimulated Raman Scattering	300
7.7	Conclusions	303
8.	<i>Some Miscellaneous Topics</i>	305
8.1	Multipole Interactions	305
8.2	Laser-Induced Inelastic Collisions	310
8.3	Conjugate Wave-Front Generation by Four-Wave Mixing	313
	Appendix: Units for Non-Linear Optical Susceptibilities	315
	Universal Constants	317
	List of Major Symbols and Acronyms	319
	<i>References</i>	329
	<i>Subject Index</i>	341
