

CONTENTS

*A detailed contents of each chapter
is given at the pages referred to here*

Foreword v

Preface vii

Contents ix

1 J. B. SAUNDERS

Precision measurements 1

2 M. FRANÇON

*Isotropic and anisotropic media. Application of anisotropic materials
to interferometry 23*

3 A. GIRARD AND P. JACQUINOT

Principles of instrumental methods in spectroscopy 71

4 K. M. BAIRD

Interferometry: some modern techniques 123

5 F. ABELÈS

Optics of thin films 143

6 H. H. HOPKINS

The theory of coherence and its applications 189

- 7 A. C. S. VAN HEEL
Use of spheres in optics 239
- 8 G. FRANKE
The production of optical parts 255
- 9 A. A. KRUIHOF
Modern light sources 309
- 10 J. DEMARCQ AND J. RÖSCH
The coronagraph 385
- 11 R. DROUGARD AND R. J. POTTER
Fiber optics 399
- 12 A. MARÉCHAL, P. LOSTIS AND J. SIMON
A precision interferometer with high light-gathering power 435
- 13 A. C. S. VAN HEEL
Alignment 447
- 14 H. G. FREIE AND A. L. SCHAWLOW
Lasers 465
- 15 H. MEYER
Optical glass 493
- 16 W. BROUWER AND A. WALTHER
Geometrical optics 503
- 17 W. BROUWER AND A. WALTHER
Design of optical instruments 571
- 18 K. ROSENHAUER
Measurement of aberrations and optical transfer functions of optical systems 633
- Author index* 663
- Subject index* 668
