

# Contents

## Part I. Ray-Tracing

1. The Laws of Refraction and Reflection .....	3
2. Tracing a Ray through a Spherical Surface .....	11
3. Tracing a Ray through a Set of Concentric Surfaces .....	24
4. Tracing a Ray through a Surface or System of Surfaces with an Axis of Rotational Symmetry .....	30
5. Ray-Tracing through Special Surfaces .....	40
6. Starting and Final Data .....	58
7. Point and Diapoint.....	64

## Part II. Precalculation of Optical Systems

8. Gaussian Optics. General Laws .....	71
9. Gaussian Optics in Terms of the System Data .....	81
10. The Gaussian Optics of Special Types of Systems ....	86
11. Applications of Gaussian Optics .....	98
12. Dispersion .....	108
13. Color Correction in Optical Systems .....	135

## Part III. General Laws

14. The Basic Formulae of Hamilton and Lagrange .....	149
15. The General Laws of Image Formation .....	159
16. The Characteristic Functions and the Direct Method..	172
17. The Surfaces of Descartes .....	185

## Part IV. Concentric Systems

18. General Laws .....	193
19. Specific Concentric Systems .....	202

## Part V. Rotation-Symmetric Systems

20. The Characteristic Functions and the Direct Method.	215
21. Finite Image-Error Theory .....	228
22. Limitations of Optical Image Formation .....	238

**Part VI. Approximation Theory for Normal Systems**

23. The Geometry of a Normal System Having a Plane of Symmetry ..... 253  
 24. Light Distribution in a Plane ..... 272  
 25. Tracing a Normal Bundle through an Optical System . 288

**Part VII. Third- and Fifth-Order Image-Error Theory**

26. Relations between the Coefficients of the Characteristic Functions ..... 299  
 27. The Image Errors and Their Geometrical Significance 308  
 28. Dependence of Image Errors on Object and Stop Position ..... 332  
 29. Dependence of Image Errors on Object Position and Object Curvature ..... 338  
 30. Computation of Third- and Fifth-Order Coefficients for a Single Surface..... 357  
 31. Calculation of the Characteristic Function for a Combined System If the Characteristic Functions Are Given for the Parts ..... 373

**Part VIII. Interpolation Theory of the Optical Image**

32. Calculation of Spot Diagrams by an Interpolation Method ..... 383  
 33. Analysis of the Spot Diagrams..... 390  
 34. Analysis of the Spot Diagrams for a Sample System .. 401

**Part IX. Optics in General Media**

35. Geometrical Optics in Inhomogeneous Media ..... 421

**Part X. Appendix**

- A. Vector Analysis ..... 424  
 B. Miscellaneous Mathematical Tools ..... 443  
 C. Numerical Examples. Tracing of Skew Rays. Tracing of Astigmatism and Asymmetry ..... 467  
 D. Historical Remarks..... 481

BIBLIOGRAPHY..... 489

INDEX..... 497
