

## CONTENTS

<b>CHAPTER 1</b>	<b>ELECTRON BEAM-SPECIMEN INTERACTIONS IN THE ANALYTICAL ELECTRON MICROSCOPE</b>	<i>D. E. Newbury</i>
	<b>I. Introduction</b>	1
	<b>II. Scattering</b>	2
	<b>III. Elastic Scattering</b>	3
	A. Elastic Scattering Cross Sections	3
	B. Elastic Scattering Angles	5
	C. Elastic Mean Free Path	6
	D. Applications of Elastic Scattering Calculations	9
	<b>IV. Inelastic Scattering</b>	12
	A. Single Electron Excitations	12
	B. Interactions With Many Electrons	16
	<b>V. Continuous Energy Loss Approximation</b>	20
	<b>VI. Comparison of Cross Sections</b>	20
	<b>VII. Simulation of Interactions</b>	21
	<b>Table of Chapter Variables</b>	24
	<b>References</b>	26
<b>CHAPTER 2</b>	<b>INTRODUCTORY ELECTRON OPTICS</b>	<i>R. H. Geiss and A. D. Romig, Jr.</i>
	<b>I. Introduction</b>	29
	<b>II. Geometric Optics</b>	30
	A. Refraction	30
	B. Cardinal Elements	31
	C. Real and Virtual Images	32
	D. Lens Equations	34
	E. Paraxial Rays	34

<b>III. Electrostatic Lenses</b>	35
A. Refraction	35
B. Action of Electrostatic Lenses	36
C. Types of Electrostatic Lenses	38
<b>IV. Magnetic Lenses</b>	39
A. Action of a Homogeneous Field	39
B. Action of an Inhomogeneous Field	40
C. Paraxial Ray Equations	42
D. Bell-Shaped Fields	44
E. Lens Excitation Parameters $\omega$ and $k^2$	45
F. Cardinal Elements of Magnetic Lenses	46
G. Objective Lenses	49
<b>V. Lens Aberrations and Defects</b>	50
A. Spherical Aberration	50
B. Pincushion, Barrel, and Spiral Distortion	51
C. Astigmatism	52
D. Chromatic Aberration	52
E. Boersch Effect	52
<b>VI. Special Magnetic Lenses</b>	53
A. Quadrapole and Octapole Lenses	53
B. Pancake and Snorkel Lenses	53
<b>VII. Prism Optics</b>	54
A. Magnetic Sectors	54
B. Electrostatic Sectors	56
C. Wien Filter	56
<b>VIII. Optics of the Electron Microscope</b>	57
A. Introduction	57
B. Tungsten Hairpin Cathode	60
C. The Lanthanum Hexaboride ( $\text{LaB}_6$ ) Cathode	61
D. Field-Emission Gun (FEG)	63
E. Condenser Lens System	64
F. Coherence	66
G. Magnification Lens System	67
<b>IX. Comparison of CTEM and STEM Optics</b>	69
<b>X. Conclusion</b>	72
<b>Table of Chapter Variables</b>	72
<b>References</b>	74

## CHAPTER 3 PRINCIPLES OF IMAGE FORMATION

*J. M. Cowley*

<b>I. Introduction</b>	77
A. CTEM and STEM	79
B. STEM and CTEM in Practice	81
C. Analytical Electron Microscopy (AEM)	83
<b>II. Diffraction and Imaging</b>	84
The Physical Optics Analogy	85
<b>III. Diffraction Patterns</b>	86
Mathematical Formulation	87
<b>IV. The Abbe Theory: CTEM Imaging</b>	88
A. Incident-Beam Convergence	90
B. Chromatic Aberration	91
C. Mathematical Formulation	91
D. Inelastic Scattering	92
<b>V. STEM Imaging</b>	93
Mathematical Description	96
<b>VI. Thin, Weakly Scattering Specimens</b>	96
A. The Weak-Scattering Approximation in Practice	98
B. Beam Convergence and Chromatic Aberration	99
C. Mathematical Formulation	101
<b>VII. Thin, Strongly Scattering Specimens</b>	102
Mathematical Formulation	103
<b>VIII. Thin, Periodic Objects: Crystals</b>	104
A. Special Imaging Conditions	108
B. Mathematical Formulation	108
<b>IX. Thicker Crystals</b>	109
A. Lattice Fringes	112
B. Mathematical Considerations	112
<b>X. Very Thick Specimens</b>	113
Mathematical Descriptions	115
<b>XI. Conclusions</b>	115
A. Measurement of Imaging Parameters	116
B. CTEM and STEM	117
<b>Table of Chapter Variables</b>	118
<b>References</b>	120

<b>CHAPTER 4 PRINCIPLES OF X-RAY ENERGY-DISPERSIVE SPECTROMETRY IN THE ANALYTICAL ELECTRON MICROSCOPE</b>	<i>D. B. Williams, J. I. Goldstein, and C. E. Fiori</i>
<b>I. Instrumentation</b>	123
A. The Energy-Dispersive Spectrometer	123
B. Interfacing the EDS to the AEM	125
C. Collimators	128
D. Windowless/Ultra-Thin Window (UTW) EDS	128
<b>II. Analysis Precautions</b>	129
A. Instrumental Artifacts	129
B. Spectral Artifacts Caused by Operation at High Beam Energies	135
C. Unusual Sources of Interference	140
D. Specimen-Preparation Artifacts	141
<b>III. Selection of Experimental Parameters</b>	142
A. Choice of Accelerating Voltage	143
B. Choice of Probe Parameters	143
C. EDS Variables	143
D. Choice of Electron Gun	145
<b>IV. Imaging and Diffraction Conditions During Analysis</b>	147
<b>V. Coherent Bremsstrahlung</b>	147
<b>VI. Measurement of X-Ray Peak and Background Intensities</b>	148
<b>VII. Summary</b>	151
<b>Table of Chapter Variables</b>	152
<b>References</b>	152
 <b>CHAPTER 5 QUANTITATIVE X-RAY ANALYSIS</b>	 <i>J. I. Goldstein, D. B. Williams, and G. Cliff</i>
<b>I. Quantification Schemes</b>	155
A. Ratio Method	155
B. Thin-Film Standards	170
<b>II. Absorption Correction</b>	171
A. Formulation	171
B. Mass Absorption Coefficient	172
C. Depth Distribution of X-Ray Production	174
D. Specimen Density ( $\rho$ )	174
E. X-Ray Absorption Path Length	175
F. Specimen Geometry	180
G. Summary	183

<b>III. Fluorescence Correction</b>	183
<b>IV. Correction Procedures for Thin-Foil Analysis</b>	187
<b>V. X-Ray Statistics</b>	188
A. Errors in X-Ray Analysis in the AEM	188
B. Minimum Detectability Limit or Minimum Mass Fraction	189
<b>VI. Beam Broadening and X-Ray Spatial Resolution</b>	191
A. Formulation	191
B. Measurement of X-Ray Spatial Resolution	197
<b>VII. Examples of Quantitative EDS Analysis in the AEM</b>	204
A. Determination of the $k_{\text{TiFe}}$ Factor for the TiFe System	204
B. Determination of Ag Composition Gradients in a Heat-Treated Al-16 wt% Ag Alloy	205
C. Determination of the Minimum Detectability Limit for Mn in a Cu-Mn Alloy	206
D. Determination of the Mg and Al Content of Oxide Ceramics	207
E. Determination of the Cr and Fe Content of CrFe Alloys	208
F. ALCHEMI (Atom Location Using Channeling-Enhanced Microanalysis)	210
<b>VIII. Summary</b>	211
<b>Table of Chapter Variables</b>	211
<b>References</b>	213

**CHAPTER 6 EDS QUANTITATION AND APPLICATION TO BIOLOGY**

*T. A. Hall  
and B. L. Gupta*

<b>I. Introduction</b>	219
<b>II. Measurements on Thin or Ultrathin Sections Mounted on Thin Films</b>	220
A. Elemental Ratios	220
B. Millimoles of Element per Unit Volume	221
C. Millimoles of Element per Kilogram of Dried Tissue (Continuum Method)	223
D. Millimoles of Element per Kilogram Wet Weight (Continuum Method, Frozen-Hydrated Sections)	227
E. Dry-Weight and Aqueous Fractions	228
F. Conversion to Millimoles of Element per Liter of Water	229

G. Absorption Corrections	230
H. Standards	231
I. Comparison of Quantitation Schemes	232
<b>III. Effects of Contamination Within the     Microscope Column</b>	232
<b>IV. Effects of Beam Damage</b>	232
<b>V. Specimen Preparation</b>	233
<b>VI. Specimens Other Than Sections Mounted on     Thin Films</b>	234
<b>VII. Sample Calculations</b>	235
A. Calculations	235
B. Summary	243
<b>Table of Chapter Variables</b>	243
<b>References</b>	244
<b>CHAPTER 7 THE BASIC PRINCIPLES OF EELS</b>	<i>D. C. Joy</i>
<b>I. What Is EELS?</b>	249
<b>II. Electron-Solid Interactions</b>	250
<b>III. The Energy-Loss Spectrum</b>	251
A. Region 1: The Zero-Loss Peak	251
B. Region 2: The Low-Loss Region	254
C. Region 3: Core Losses	255
<b>IV. Collecting the EEL Spectrum</b>	257
<b>V. Recording the EEL Spectrum</b>	261
<b>VI. Microanalysis Using Inner-Shell Losses</b>	263
<b>VII. Problems in EELS Microanalysis</b>	266
<b>VIII. The Sensitivity of EELS Microanalysis</b>	269
<b>IX. Spatial Resolution of EELS</b>	270
<b>X. Energy-Filtered Imaging</b>	272
<b>Table of Chapter Variables</b>	274
<b>References</b>	275
<b>CHAPTER 8 QUANTITATIVE MICROANALYSIS USING EELS</b>	<i>D. C. Joy</i>
<b>I. Introduction</b>	277

<b>II. Chemical Microanalysis Using Plasmon Losses</b>	278
<b>III. Core Loss Quantification</b>	279
<b>IV. Applying the Quantitation Formula</b>	281
A. The Edge Integral	281
B. The Zero-Loss Integral	284
C. Calculating the Partial Cross Section	285
D. Worked Example	288
<b>V. Factors Affecting the Accuracy of Quantitation</b>	290
A. Statistics	290
B. Electron-Optical Factors	290
C. Instrumental Factors	292
<b>VI. The Effect of Sample Thickness</b>	292
<b>VII. Extended Fine Structure Studies</b>	296
<b>Table of Chapter Variables</b>	297
<b>References</b>	298

**CHAPTER 9 ELECTRON MICRODIFFRACTION**

*J. C. H. Spence  
and  
R. W. Carpenter*

<b>I. Introduction</b>	301
<b>II. Experimental Methods</b>	303
A. Static Beam Microdiffraction	303
B. Rocking Beam Methods	313
C. Intensity Distribution Recording and Measurement	319
<b>III. Theory</b>	321
A. Perfect Crystals, "Coherent" and "Incoherent" Microdiffraction	321
B. Defects: Coherent Microdiffraction	323
C. Defects: Incoherent Microdiffraction	325
D. Shadow Images and Ronchigrams	326
<b>IV. Applications</b>	328
A. Space-Group Analysis	328
B. Local Thickness Measurement for Crystalline Specimens	330
C. Microdiffraction From Defects and Interfaces	331
D. Structure Factor Refinement	337

	E. Microdiffraction From Amorphous Materials	337
	F. Short-Range Order	338
	G. Small Particles and Catalyst Research	338
	H. Microdiffraction From Surfaces	340
	<b>V. Relationship Between STEM Imaging, Microdiffraction, and EELS</b>	341
	<b>Table of Chapter Variables</b>	347
	<b>References</b>	349
<b>CHAPTER 10</b>	<b>BARRIERS TO AEM: CONTAMINATION AND ETCHING</b>	<i>J. J. Hren</i>
	<b>I. Introduction</b>	353
	<b>II. Some Definitions</b>	354
	<b>III. Early Observations of Contamination</b>	354
	<b>IV. The Nature of the Contaminant</b>	355
	<b>V. Relationship Between Contamination and Etching</b>	356
	<b>VI. Surface Diffusion and Beam Size Effects</b>	358
	<b>VII. Recent Studies of Contamination and Etching</b>	359
	<b>VIII. Summary of Phenomenological Observations</b>	362
	<b>IX. The Mechanisms of Contamination</b>	363
	A. Physisorption of Hydrocarbon Molecules	364
	B. Surface Diffusion of Hydrocarbon Molecules	364
	C. Polymerization and Fragmentation of Hydrocarbon Molecules in the Electron Beam	364
	D. Beam-Induced Thermal Gradients	364
	E. Electrical Gradients in the Surface	365
	<b>X. The Mechanisms of Etching</b>	365
	A. Physisorption of a Potentially Reactive Gas	366
	B. Activation of the Reactive Gas by Electrons	366
	C. Specimen or Contaminant Molecules That Will React With the Excited Physisorbed Gas	367
	D. The Reactant Molecules Must be Volatile	367
	<b>XI. Working Solutions: Proven and Potential</b>	367
	<b>XII. Some Effects of Contamination and Etching on AEM</b>	369
	<b>Table of Chapter Variables</b>	371
	<b>References</b>	372

<b>CHAPTER 11</b>	<b>RADIATION EFFECTS ENCOUNTERED BY INORGANIC MATERIALS IN ANALYTICAL ELECTRON MICROSCOPY</b>	<i>D. G. Howitt</i>
	<b>I. Introduction</b>	375
	<b>II. Direct Displacement and Ionization Processes</b>	376
	<b>III. The Collection of Spectra</b>	381
	<b>IV. The Significance of Radiation Damage and Quantitative Estimates for EDXS and EELS</b>	384
	<b>V. Radiation Damage From Ion-Thinning Processes</b>	387
	<b>Table of Chapter Variables</b>	389
	<b>References</b>	391
<b>CHAPTER 12</b>	<b>HIGH-RESOLUTION MICROANALYSIS AND ENERGY-FILTERED IMAGING IN BIOLOGY</b>	<i>H. Shuman</i>
	<b>I. Introduction</b>	393
	<b>II. Experimental Arrangement</b>	394
	<b>III. Elemental Analysis With EELS</b>	400
	<b>IV. Elemental Imaging</b>	406
	<b>Table of Chapter Variables</b>	410
	<b>References</b>	410
<b>CHAPTER 13</b>	<b>A CRITIQUE OF THE CONTINUUM NORMALIZATION METHOD USED FOR BIOLOGICAL X-RAY MICROANALYSIS</b>	<i>C. E. Fiori, C. R. Swyt, and J. R. Ellis</i>
	<b>I. Introduction</b>	413
	<b>II. The Thin Target</b>	415
	A. The Characteristic Signal	415
	B. The Continuum Signal	418
	<b>III. Derivation of the Hall Procedure in Terms of X-Ray Cross Sections</b>	424
	<b>IV. The Coulomb Approximation: The Theory of Sommerfeld</b>	426
	<b>V. The Born Approximation</b>	428
	<b>VI. The Nominal <math>Z^2</math> and <math>1/E</math> Dependence of Continuum Cross Sections: The "Best" Energy at Which to Measure the Continuum</b>	433

<b>VII. The Characteristic-to-Local-Continuum Ratio: A Way Around the Absorption Correction</b>	434
<b>VIII. The Theoretical Characteristic-to-Local- Continuum Ratio</b>	434
<b>IX. Statistical Properties of Characteristic-to- Continuum Ratios</b>	437
<b>X. Summary</b>	440
<b>Table of Chapter Variables</b>	441
<b>References</b>	442
<b>INDEX</b>	445
