

# *Contents*

<b>Chapter 1. Newton, Fizeau, and Haidinger Interferometers</b>	<b>1</b>
<i>M. V. R. K. Murty</i>	
1.1. Newton Interferometer	1
1.1.1. Source Size Considerations	10
1.1.2. Some Suitable Light Sources	11
1.1.3. Materials for the Optical Flats	11
1.1.4. Simple Procedure for Estimating Peak Error	12
1.1.5. Other Applications of Newton's Interferometer	14
1.2. Fizeau Interferometer	19
1.2.1. The Basic Fizeau Interferometer	20
1.2.2. Liquid Reference Flats	22
1.2.3. Testing Nearly Parallel Plates	22
1.2.4. Fizeau Interferometer for Curved Surfaces	24
1.2.5. Monochromaticity Requirement for the Source	27
1.2.6. Fizeau Interferometer with Laser Source	27
1.2.7. Multiple-Beam Fizeau Setup	29
1.2.8. Testing the Inhomogeneity of Large Glass or Fused Quartz Samples	29
1.2.9. Testing Cube Corner and Right Angle Prisms	30
1.2.10. Testing Concave or Convex Surfaces	34
1.2.11. Quality of Collimation Lens Required	34
1.3. Haidinger Interferometer	36
1.3.1. Applications of Haidinger Fringes	37
1.3.2. Use of Laser Source for Haidinger Interferometer	37
1.4. Absolute Testing of Flats	41

<b>Chapter 2. Twyman–Green Interferometer</b>	<b>47</b>
<i>D. Malacara</i>	
2.1. Introduction	47
2.1.1. Beam-Splitter Plate	50
2.2. Coherence Requirements	51
2.2.1. Spatial Coherence	53
2.2.2. Temporal Coherence	56
2.3. Uses of a Twyman–Green Interferometer	58
2.3.1. Testing of Prisms and Diffraction Rulings	59
2.3.2. Testing of Lenses	61
2.3.3. Testing of Microscope Objectives	63
2.4. Unequal-Path Interferometer	64
2.4.1. Some Special Designs	65
2.5. Photography of the Interference Pattern	67
2.6. Typical Interferograms and Their Analysis	69
2.6.1. Analysis of Interferograms of Arbitrary Wavefronts	76
<b>Chapter 3. Common-Path Interferometers</b>	<b>81</b>
<i>S. Mallick</i>	
3.1. Introduction	81
3.2. Burch's Interferometer Employing Two Matched Scatter Plates	82
3.3. Birrefringent Beam Splitters	84
3.3.1. Savart Polariscope	84
3.3.2. Wollaston Prism	86
3.3.3. Double-Focus Systems	88
3.4. Lateral Shearing Interferometers	88
3.4.1. Use of a Savart Polariscope	88
3.4.2. Use of a Wollaston Prism	91
3.5. Double-Focus Interferometer	93

<b>CONTENTS</b>	<b>xiii</b>
3.6. Saunders' Prism Interferometer	95
3.7. Point Diffraction Interferometer	97
3.8. Measurement of the Optical Transfer Function	98
3.8.1. Scanning Method	98
3.8.2. Autocorrelation Method	101
<b>Chapter 4. Lateral Shearing Interferometers</b>	<b>105</b>
<i>M. V. R. K. Murty</i>	
4.1. Introduction	105
4.2. Considerations Regarding Coherence Properties of the Light Source	106
4.3. Brief Theory of Lateral Shearing Interferometry	108
4.3.1. Considerations of Lateral Shear in Relation to Primary Aberrations	112
4.4. Evaluation of an Unknown Wavefront	117
4.5. Lateral Shearing Interferometers in Collimated Light (White Light Compensated)	120
4.5.1. Arrangements Based on the Jamin Interferometer	120
4.5.2. Arrangements Based on the Michelson Interferometer	123
4.5.3. Arrangements Based on a Cyclic Interferometer	123
4.5.4. Arrangements Based on the Mach-Zehnder Interferometer	125
4.6. Lateral Shearing Interferometers in Convergent Light (White Light Compensated)	127
4.6.1. Arrangements Based on the Michelson Interferometer	127
4.6.2. Arrangements Based on the Mach-Zehnder Interferometer	130
4.7. Lateral Shearing Interferometers Using Lasers	133
4.7.1. Other Applications of the Parallel Plate Interferometer	136
4.8. Other Types of Lateral Shearing Interferometers	141

4.8.1.	Lateral Shearing Interferometers Based on Diffraction	141
4.8.2.	Lateral Shearing Interferometers Based on Polarization	145
<b>Chapter 5.</b>	<b>Radial, Rotational, and Reversal Shear Interferometers</b>	149
	<i>D. Malacara</i>	
5.1.	Introduction	149
5.2.	Radial Shear Interferometers	150
5.2.1.	Single-Pass Radial Shear Interferometers	152
5.2.2.	Double-Pass Radial Shear Interferometers	158
5.2.3.	Laser Radial Shear Interferometers	161
5.3.	Rotational Shear Interferometers	165
5.3.1.	Source Size Uncompensated Rotational Shear Interferometers	169
5.3.2.	Source Size Compensated Rotational Shear Interferometers	171
5.4.	Reversal Shear Interferometers	172
5.4.1.	Some Reversal Shear Interferometers	174
<b>Chapter 6.</b>	<b>Multiple-Beam Interferometers</b>	179
	<i>C. Roychoudhuri</i>	
6.1.	Brief Historical Introduction	179
6.2.	Precision in Multiple-Beam Interferometry	182
6.3.	Multiple-Beam Fizeau Interferometer	184
6.3.1.	Conditions for Fringe Formation	184
6.3.2.	Fizeau Interferometry	191
6.4.	Fringes of Equal Chromatic Order	194
6.5.	Reduction of Fringe Interval in Multiple- Beam Interferometry	198
6.6.	Plane Parallel Fabry–Perot Interferometer	199
6.6.1.	Measurement of Thin-Film Thickness	199
6.6.2.	Surface Deviation from Planeness	199

6.7.	Tolansky Fringes with Fabry–Perot Interferometer	204
6.8.	Multiple-Beam Interferometer for Curved Surfaces	207
6.9.	Coupled and Series Interferometers	208
6.9.1.	Coupled Interferometer	209
6.9.2.	Series Interferometer	210
6.10.	Holographic Multiple-Beam Interferometers	211
<b>Chapter 7.</b>	<b>Multiple-Pass Interferometers</b>	217
	<i>P. Hariharan</i>	
7.1.	Double-Pass Interferometers	217
7.1.1.	Separation of Aberrations	217
7.1.2.	Reduction of Coherence Requirements	220
7.1.3.	Double Passing for Increased Accuracy	223
7.2.	Multipass Interferometry	225
<b>Chapter 8.</b>	<b>Foucault, Wire, and Phase Modulation Tests</b>	231
	<i>J. Ojeda-Castañeda</i>	
8.1.	Introduction	231
8.2.	Foucault or Knife-Edge Test	231
8.2.1.	Description	231
8.2.2.	Geometrical Theory	234
8.2.3.	Physical Theory	246
8.3.	Wire Test	253
8.3.1.	Geometrical Theory	258
8.3.2.	Physical Theory	259
8.4.	Platzek–Gaviola Test	260
8.4.1.	Geometrical Theory	261
8.5.	Phase Modulation Tests	264
8.5.1.	Zernike Test and Its Relation to the Smartt Interferometer	264
8.5.2.	Lyot Test	270
8.5.3.	Wolter Test	271
8.6.	Ritchey–Common Test	274

<b>Chapter 9. Ronchi Test</b>	<b>283</b>
<i>A. Cornejo-Rodriguez</i>	
9.1. Introduction	283
9.1.1. Historical Introduction	283
9.2. Geometrical Theory	284
9.2.1. Ronchi Patterns for Primary Aberrations	286
9.2.2. Ronchi Patterns for Aspherical Surfaces	293
9.2.3. Null Ronchi Rulings	296
9.3. Wavefront Shape Determination	298
9.3.1. General Case	298
9.3.2. Surfaces with Rotational Symmetry	302
9.4. Physical Theory	304
9.4.1. Mathematical Treatment	305
9.4.2. Physical versus Geometrical Theory	310
9.5. Practical Aspects of the Ronchi Test	311
9.6. Some Related Tests	314
9.6.1. Concentric Circular Grid	314
9.6.2. Scanning Ronchi Test	315
9.6.3. Side Band Ronchi Test	316
9.6.4. Lower Test	317
<b>Chapter 10. Hartmann and Other Screen Tests</b>	<b>323</b>
<i>I. Ghozeil</i>	
10.1. Introduction	323
10.2. Theory	326
10.3. Types of Screens	330
10.3.1. The Hartmann Radial Pattern	330
10.3.2. The Helical Screen Test	333
10.3.3. The Square Array Tests	334
10.4. Hartmann Test Implementation	338

<b>CONTENTS</b>	xvii
10.5. Data Reduction	340
10.6. The Michelson and Gardner–Bennett Tests	346
10.7. Summary	347
<b>Chapter 11. Star Tests</b>	351
<i>W. T. Welford</i>	
11.1. Principles of the Star Test for Small Aberrations	352
11.1.1. The Unaberrated Airy Pattern	352
11.1.2. The Defocused Airy Pattern	356
11.1.3. Polychromatic Light	360
11.1.4. Systems with Central Obstructions	362
11.1.5. Effects of Small Aberrations	363
11.2. Practical Aspects with Small Aberrations	365
11.2.1. Effects to be Looked For	365
11.2.2. The Light Source for Star Testing	367
11.2.3. The Arrangement of the Optical System for Star Testing	369
11.2.4. Microscope Objectives	372
11.2.5. Can the Star Test Be Made Quantitative?	373
11.3. The Star Test with Large Aberrations	374
11.3.1. Spherical Aberration	375
11.3.2. Longitudinal Chromatic Aberration	376
11.3.3. Axial Symmetry	376
11.3.4. Astigmatism	376
11.3.5. Distortion	377
11.3.6. Nonnull Tests	378
<b>Chapter 12. Holographic and Moiré Techniques</b>	381
<i>J. C. Wyant</i>	
12.1. Introduction	381
12.2. Interferometers Using Real Holograms	382
12.2.1. Wavefront Storage	383
12.2.2. Nondestructive Testing	384
12.2.3. Holographic Test Plate	387

12.3.	Interferometers Using Synthetic Holograms	389
12.3.1.	Basic Procedure	389
12.3.2.	Sources of Error	391
12.3.3.	Results Obtained Using a Computer-Generated Hologram	393
12.3.4.	Combination with Conventional Null Optics	394
12.3.5.	Future Expectations for Computer-Generated Hologram Testing	396
12.4.	Two-Wavelength Interferometry	397
12.4.1.	Basic Technique	397
12.4.2.	Testing Ground Surfaces	400
12.4.3.	Electronic Detection Techniques	401
12.5.	Moiré Interferometry	402
12.5.1.	Basic Principles	402
12.5.2.	Experimental Setups	403
12.5.3.	Experimental Results	406
<b>Chapter 13. Fringe Scanning Interferometers</b>		409
<i>J. H. Bruning</i>		
13.1.	Fringe Scanning	409
13.2.	Synchronous Detection of Interference Fringes	410
13.3.	Scanning Twyman-Green Interferometer	421
13.3.1.	General Considerations	421
13.3.2.	System Errors	423
13.3.3.	Wavefront Acquisition	424
13.3.4.	Wavefront Processing	425
13.3.5.	Absolute Calibration	426
13.3.6.	Radius Measurement	428
13.3.7.	Lens Testing	430
13.4.	Scanning Lateral Shearing Interferometers	432
13.5.	Distance-Measuring Interferometers	433
13.6.	Moiré Fringe Scanning	436

<b>CONTENTS</b>	xix
<b>Chapter 14. Null Tests Using Compensators</b>	439
<i>A. Offner</i>	
14.1. Historical Background	439
14.2. The Dall Compensator	442
14.3. The Offner Compensator	444
14.3.1. Refractive Offner Compensator	445
14.3.2. Reflective Offner Compensator	447
14.4. Other Null Tests for Concave Conicoids	452
14.5. Hindle Type Tests	455
<b>Chapter 15. Some Parameter Measurements</b>	459
<i>R. H. Noble</i>	
15.1. Length Measurement	459
15.1.1. Radius of Curvature	460
15.1.2. Back Focal Length and Focal Length	464
15.1.3. Thickness of Optical Components	465
15.2. Angle Measurement	465
15.2.1. Divided Circles	466
15.2.2. Bevel Gauge	466
15.2.3. Comparison Standards	467
15.2.4. Fabrication Tolerances	470
15.3. Assembly Tolerances	473
<b>Appendix 1. An Optical Surface and its Characteristics</b>	479
<b>Appendix 2. Zernike Polynomials and Wavefront Fitting</b>	489
<b>Appendix 3. Classification of Wavefront Aberrations</b>	507
<b>Appendix 4. Some Useful Null Testing Configurations</b>	513
<b>Index</b>	517
