Foreword . . . . .	vii

### 1. Photographic Materials and Processes

R. E. JACOBSON

I. Introduction . . . . .	1
II. Sensitive materials . . . . .	2
A. The photographic emulsion . . . . .	2
B. Support materials . . . . .	4
C. Response of photographic materials . . . . .	6
D. Sensitometry . . . . .	12
E. Film speed . . . . .	18
F. Exposure latitude . . . . .	19
G. Black-and-white materials. . . . .	20
H. Colour materials . . . . .	28
I. Storage of photographic materials . . . . .	39
III. Darkrooms and photographic workrooms . . . . .	40
A. Design and construction of darkrooms . . . . .	40
B. Layout of darkrooms and workrooms . . . . .	45
C. Darkroom equipment . . . . .	46
IV. Processing . . . . .	51
A. Introduction . . . . .	51
B. Developers . . . . .	52
C. Processes following development . . . . .	57
D. Packaging of photographic chemicals and preparation of solutions . . . . .	59
E. Storage of solutions . . . . .	59
F. Safety and photographic chemicals . . . . .	60
G. Processing techniques . . . . .	61
H. Quality control. . . . .	65
V. Printing and enlarging . . . . .	66
A. Introduction . . . . .	66
B. Printing equipment . . . . .	67

C. Printing black-and-white materials . . . . .	70
D. Printing colour materials . . . . .	71
E. Print finishing . . . . .	74
VI. The image . . . . .	75
A. Image quality . . . . .	75
B. Graininess and granularity . . . . .	76
C. Sharpness and acutance . . . . .	78
D. Resolving power . . . . .	79
E. Modulation transfer function (MTF). . . . .	81
References . . . . .	83

## 2. Photographic Optics

SIDNEY F. RAY

I. Introduction . . . . .	87
II. Properties of light and radiation . . . . .	87
A. The electromagnetic spectrum . . . . .	87
B. Effect on detectors . . . . .	89
C. Geometrical properties . . . . .	90
D. Physical properties . . . . .	93
E. Photometry . . . . .	96
III. Properties of optical materials . . . . .	98
A. Glasses, plastics and crystalline materials . . . . .	98
B. Reflection, absorption and transmission . . . . .	99
C. Dispersion . . . . .	102
IV. Properties of lenses . . . . .	104
A. Image formation by simple lenses . . . . .	104
B. Compound lenses and cardinal planes . . . . .	105
C. Focal length . . . . .	107
D. Stops, pupils and apertures . . . . .	109
E. Covering power. . . . .	112
F. Lens aberrations . . . . .	115
G. Flare . . . . .	118
H. Physics of the image . . . . .	120
V. The lens in use . . . . .	125
A. Close focusing . . . . .	125
B. Image magnification . . . . .	126
C. Depth of focus and depth of field . . . . .	127
D. Perspective . . . . .	131
VI. Lens types . . . . .	132
A. The standard lens . . . . .	132
B. The long focus lens . . . . .	135
C. The telephoto lens . . . . .	137
D. Mirror lenses . . . . .	138

CONTENTS

xi

E. Wide-angle lenses . . . . .	141
F. Zoom lenses . . . . .	144
G. Macro lenses . . . . .	147
H. Enlarger lenses . . . . .	148
I. Projector lenses . . . . .	150
J. Copying lenses . . . . .	150
VII. Optical accessories . . . . .	151
A. Supplementary (close-up) lenses . . . . .	151
B. Teleconverters . . . . .	153
C. Afocal converter lenses . . . . .	154
D. Extension tubes and bellows . . . . .	154
E. Optical filters . . . . .	155
F. Lens hood . . . . .	157
G. Attaching a camera to other optical systems . . . . .	158
VIII. Selection of a lens . . . . .	159
A. Logistics . . . . .	159
B. The general purpose lens . . . . .	159
C. Special requirements . . . . .	160
D. The camera . . . . .	161
E. Care of lenses . . . . .	162
IX. Testing lenses . . . . .	162
A. General . . . . .	162
B. Lens test charts . . . . .	163
C. MTF testing . . . . .	165
References . . . . .	166

**3. Light Sources for Photography**

P. T. ANSTEE

I. The nature of light . . . . .	169
II. The production of light . . . . .	169
A. Daylight . . . . .	169
B. Artificial light . . . . .	170
III. Incandescent filament lamps . . . . .	173
A. Filaments . . . . .	173
B. Filling gases . . . . .	176
C. Lamp glasses . . . . .	177
D. Lamp bases . . . . .	179
E. Lamp output . . . . .	179
F. The tungsten halogen lamps . . . . .	180
G. Incandescent filament lamps for photographic and allied applications . . . . .	183
IV. Discharge lamps . . . . .	187
A. General principles . . . . .	187

B. Sodium lamps . . . . .	188
C. Mercury lamps . . . . .	188
D. Xenon lamps . . . . .	196
E. Fluorescent lamps for photographic applications . . . . .	198
V. Photoflash lamps . . . . .	199
A. Expendable photoflash bulbs . . . . .	199
B. Electronic flash . . . . .	204
C. Guide numbers . . . . .	206
VI. Units and terms . . . . .	207
References . . . . .	209

#### 4. Photogrammetry

IAN NEWTON

I. Definition . . . . .	211
II. Applications . . . . .	211
A. General remarks . . . . .	211
B. Two examples . . . . .	212
C. Specific fields of application . . . . .	215
III. Acquisition of photography . . . . .	217
A. Cameras . . . . .	217
B. Camera calibration . . . . .	220
C. Non-conventional imaging systems . . . . .	221
D. Materials . . . . .	221
E. Photographic techniques . . . . .	221
F. Taking the photographs . . . . .	223
G. Photo control . . . . .	225
IV. Measurement of photography . . . . .	226
A. Analogue methods . . . . .	226
B. Analytical methods . . . . .	230
C. Accuracy of measurement . . . . .	233
V. Photo-interpretation and remote sensing . . . . .	234
References . . . . .	235

#### 5. Infrared Recording

H. LOU GIBSON

I. Introduction . . . . .	237
II. Definitions . . . . .	237
III. Methods . . . . .	238
A. Actinic recording . . . . .	238
B. Thermal recording . . . . .	239
C. Nonsilver recording . . . . .	241
D. Remote sensing techniques . . . . .	243

IV. Applications . . . . .	244
A. Medical . . . . .	244
B. Zoological. . . . .	252
C. Botanical . . . . .	253
D. Remote sensing. . . . .	259
E. Cultural applications. . . . .	266
F. Scientific and technological applications . . . . .	269
V. Infrared photomicrography . . . . .	278
A. Utility . . . . .	278
B. Technical factors . . . . .	280
VI. Methods of indoor recording . . . . .	281
A. Equipment . . . . .	281
B. Sensitized materials . . . . .	286
C. Negative processing . . . . .	288
D. Positive print preparation . . . . .	288
E. Recording techniques . . . . .	289
F. Infrared colour photography . . . . .	300
G. Dual renditions. . . . .	301
VII. Conclusion . . . . .	303
Acknowledgement . . . . .	303
References . . . . .	303

## 6. Ultraviolet and Fluorescence Recording

PETER HANSELL AND RAYMOND J. LUNNON

I. Introduction . . . . .	321
A. Basic properties . . . . .	321
B. Basic techniques . . . . .	322
C. Biological effects—a warning . . . . .	322
II. Ultraviolet radiation sources . . . . .	323
A. Mercury vapour lamps . . . . .	324
B. Electronic flash . . . . .	327
C. Other sources . . . . .	328
III. Screens and filters . . . . .	331
A. Ultraviolet transmitting screens. . . . .	331
B. Ultraviolet absorbing filters . . . . .	332
C. Filter mounts . . . . .	333
D. Source housing . . . . .	333
IV. Sensitive materials . . . . .	335
V. Ultraviolet photography . . . . .	336
A. Harmonization of components . . . . .	336
B. Reflected ultraviolet photography—method one . . . . .	337
C. Reflected ultraviolet photography—method two . . . . .	337
VI. Fluorescence photography . . . . .	339
A. Testing the system . . . . .	340

B. "Orientating" exposures . . . . .	341
C. Flash technique. . . . .	343
VII. Schedule of applications . . . . .	342
A. Reflected ultraviolet photography . . . . .	342
B. Fluorescence photography. . . . .	348
C. Conclusion . . . . .	353
References . . . . .	353

## 7. Close-up Photography and Photomacrography

A. R. WILLIAMS

I. Introduction . . . . .	355
II. Definitions . . . . .	355
III. Optics . . . . .	356
A. Basic optical formulae . . . . .	356
B. Selection of focal length . . . . .	358
C. The relationship between resolution, aperture and depth of field . . . . .	359
D. Aberration correction . . . . .	360
E. Magnification and exposure . . . . .	360
IV. Equipment . . . . .	362
A. Cameras . . . . .	362
B. Lenses for photomacrography . . . . .	365
C. Accessories . . . . .	367
D. Lighting equipment . . . . .	371
V. Lighting techniques . . . . .	373
A. Lighting for modelling . . . . .	373
B. Shadow-free and cavity illumination . . . . .	374
C. Dark-ground incident illumination . . . . .	375
D. Transillumination . . . . .	376
VI. Environmental control . . . . .	379
A. Backgrounds . . . . .	379
B. Limiting subject movement . . . . .	381
C. The aquatic specimen . . . . .	382
D. Subterranean fauna . . . . .	382
VII. Gross specimen photography . . . . .	383
A. Handling biological material . . . . .	383
B. Preservation of colour . . . . .	384
C. Orientation and scale . . . . .	384
D. Gels and precipitation plates . . . . .	385
E. Cultures and petri-dishes . . . . .	386
F. Bone specimens. . . . .	386
G. Fossils . . . . .	386
VIII. Special techniques . . . . .	387

CONTENTS

xv

A. Slit images . . . . .	387
B. Immersion techniques . . . . .	388
C. Polarization . . . . .	388
D. Superimposition . . . . .	389
E. Orthographic photography . . . . .	389
F. Invisible radiation . . . . .	389
G. Optical staining . . . . .	390
References . . . . .	391

**8. Photomicrography**

J. P. VETTER

I. Introduction . . . . .	393
A. Terms: photomicrography or photomacrography? . . . . .	394
B. Microphotography . . . . .	395
II. Equipment requirements . . . . .	395
A. The microscope. . . . .	395
B. The camera . . . . .	400
III. Focusing techniques. . . . .	402
A. Eye refraction errors affecting focusing . . . . .	402
B. Pupil distance and eye dominance . . . . .	403
C. Focusing the microscope . . . . .	404
D. Focusing the image in an eyepiece . . . . .	405
E. Focusing the image on a viewing screen . . . . .	406
IV. Solving photographic imaging problems . . . . .	407
A. Chromatic aberration of the substage condenser . . . . .	407
B. Spherical aberration: misuse of the substage condenser . . . . .	407
C. Spherical aberration: cover glass thickness. . . . .	408
D. Adjusting the aperture diaphragm . . . . .	409
E. Spherical aberration: image projection distance . . . . .	410
F. Empty magnification. . . . .	412
G. Variables in the light source . . . . .	413
H. Vibration . . . . .	414
V. Filter classification . . . . .	415
A. Physical properties . . . . .	415
B. Color modifying filters . . . . .	416
C. Contrast control filters . . . . .	418
D. Special application filters . . . . .	419
VI. Filtering techniques . . . . .	421
A. Color photomicrography . . . . .	421
B. Black and white photomicrography . . . . .	426
VII. Film selection . . . . .	434
A. Color reversal film . . . . .	435
B. Negative color film . . . . .	435

C. Instant color film . . . . .	436
D. Negative black and white film . . . . .	436
E. Chromogenic film . . . . .	437
VIII. Exposure determination . . . . .	438
A. Test strips . . . . .	438
B. Hand-held exposure meter. . . . .	440
C. Portable laboratory meters . . . . .	440
D. Automatic camera exposure systems . . . . .	440
E. Solving exposure problems . . . . .	441
IX. Processing techniques . . . . .	444
A. Color processing modifications . . . . .	444
B. Black and white processing modifications . . . . .	444
C. Improving the processing technique . . . . .	447
D. Black and white printing . . . . .	449
E. Preparation of prints for publication . . . . .	450
References and bibliography . . . . .	451
Addendum: Quick procedure guide . . . . .	453

## 9. Photographic Copying

K. P. DUGUID

I. Introduction . . . . .	457
II. Equipment . . . . .	457
A. Cameras . . . . .	457
B. Lenses . . . . .	459
C. Copy stands . . . . .	459
D. Lighting . . . . .	462
III. Exposure . . . . .	463
A. The effect of magnification . . . . .	463
B. Film speed . . . . .	464
C. Automatic cameras . . . . .	464
IV. Black and white line copy. . . . .	465
A. Processing techniques for lith film . . . . .	465
B. Bleach-etch reversal . . . . .	466
V. Continuous tone copy . . . . .	466
A. Half-tone illustrations . . . . .	467
B. Combined line and tone . . . . .	467
C. Special types of original copy . . . . .	467
D. Coloured continuous tone originals . . . . .	468
E. Reversal processing techniques . . . . .	468
F. Copying in colour . . . . .	469
G. Copying recording traces . . . . .	470
VI. Reproduction of radiographs . . . . .	472
A. Equipment . . . . .	472

B. Selection of materials and procedures . . . . .	472
C. Control of contrast . . . . .	473
D. Electronic printers . . . . .	474
VII. Duplication of colour transparencies . . . . .	476
A. Equipment and techniques . . . . .	476
B. Choice of emulsion . . . . .	478
C. Contrast control . . . . .	478
D. Production of black and white prints from colour transparencies . . . . .	479
VIII. Overhead transparencies . . . . .	479
IX. Slide production . . . . .	480
A. Format and standards . . . . .	480
B. Monochrome positive . . . . .	480
C. Negative . . . . .	480
D. Negative tinted . . . . .	480
E. Diazochrome . . . . .	481
F. Dye coupling . . . . .	481
G. Combination slides . . . . .	482
H. Multicolour slides . . . . .	482
I. Computer graphic slides . . . . .	482
X. Recording images of a cathode ray tube . . . . .	483
A. Introduction . . . . .	483
B. Equipment and techniques . . . . .	483
C. Cine . . . . .	485
References . . . . .	488

## 10. Analysis Using Film

C. R. ARNOLD

I. Introduction . . . . .	491
II. Analysis requirements . . . . .	492
A. Motion analysis . . . . .	492
B. Spatial or size analysis . . . . .	494
C. Luminance analysis . . . . .	494
D. Quantitative analysis . . . . .	495
E. Qualitative analysis . . . . .	496
III. Cine recording . . . . .	496
A. Principles . . . . .	496
B. Materials . . . . .	497
C. Equipment . . . . .	498
IV. High speed cine recording. . . . .	500
A. Principles . . . . .	500
B. Equipment . . . . .	501
C. Methods . . . . .	506

D. Applications . . . . .	509
V. Time-lapse cine recording . . . . .	511
A. Principles . . . . .	511
B. Equipment . . . . .	511
C. Methods . . . . .	512
D. Applications . . . . .	514
VI. Short duration exposures . . . . .	514
A. Electronic flash and sparks . . . . .	515
B. High speed shutters . . . . .	515
C. Sequence photography . . . . .	517
VII. Streak recording . . . . .	520
A. Principles . . . . .	520
B. Equipment . . . . .	521
C. Methods and applications . . . . .	521
VIII. Film analysis . . . . .	523
A. Analysis projectors . . . . .	524
B. Film analysers . . . . .	524
C. Digitizing image analysers . . . . .	525
References . . . . .	528
<b>Subject Index . . . . .</b>	<b>531</b>
