

# Table of contents

<b>Preface</b>	<b>ix</b>
<b>1 Introduction</b>	<b>1</b>
<b>2 Fundamentals of quantum theory</b>	<b>5</b>
2.1 Axioms of quantum mechanics . . . . .	5
2.2 More on quantum mechanics: states, observables and yes-no experiments . . . . .	10
2.3 Time evolution . . . . .	14
2.4 Uncertainty relations . . . . .	17
2.5 Symmetries . . . . .	19
2.6 Canonical quantization . . . . .	20
2.7 Identical particles and the second quantization . . . . .	24
2.8 Quantization of the free electromagnetic field . . . . .	29
2.9 Quantum correlation functions and their properties . . . . .	30
2.9.1 Spectral properties of quantum correlation functions . . . . .	33
2.9.2 Analytic properties of quantum correlation functions . . . . .	35
2.9.3 Wave equations for quantum correlation functions . . . . .	35
2.9.4 Symmetries, positive definiteness and other inequalities . . . . .	36
2.9.5 Quantum characteristic functionals . . . . .	38
2.9.6 Introduction to photon statistics . . . . .	39
2.10 Appendix: mathematical tools . . . . .	43
<b>3 Quantum theory of measurement</b>	<b>54</b>
3.1 Foundation of quantum measurement . . . . .	55
3.2 Formalism of quantum measurement . . . . .	60
3.2.1 Quantum systems . . . . .	61
3.2.2 Probability operator measure . . . . .	62
3.2.3 Back-action of the measurement . . . . .	66
3.3 Quantum optical measurements . . . . .	69
3.3.1 Photon counting . . . . .	70

3.3.2	Homodyne and heterodyne detections . . . . .	72
3.4	Quantum phase . . . . .	79
3.4.1	Ideal phase measurement . . . . .	80
3.4.2	Realistic phase measurement . . . . .	86
3.4.3	Phase detection in Mach-Zehnder interferometer . . . . .	89
3.4.4	Geometric phase . . . . .	95
3.5	Linear amplifiers . . . . .	98
3.6	Quantum nondemolition measurement . . . . .	103
3.7	High-precision measurement and detection of gravitational waves . . . . .	110
<b>4</b>	<b>Coherent states</b>	<b>116</b>
4.1	The general notion of the coherent state . . . . .	116
4.2	Coherent states associated with Lie groups . . . . .	118
4.3	Coherent states of the harmonic oscillator . . . . .	120
4.3.1	Basic properties . . . . .	120
4.3.2	Bargmann representation . . . . .	123
4.3.3	Operators and their symbols, orderings . . . . .	124
4.3.4	$\Omega$ -ordering . . . . .	129
4.4	Squeezed states . . . . .	132
4.5	Spin coherent states . . . . .	136
4.6	Heisenberg-Langevin approach to quantum statistics . . . . .	140
4.7	Schrödinger approach to quantum statistics — master equation and generalized Fokker-Planck equation . . . . .	145
4.8	Generalized superposition of coherent fields and quantum noise . . . . .	151
<b>5</b>	<b>Nonclassical optical phenomena and their relations</b>	<b>156</b>
5.1	Quadrature squeezing — squeezing of vacuum fluctuations . . . . .	156
5.2	Antibunching of photons . . . . .	161
5.3	Photon-number squeezing — sub-Poissonian photon statistics . . . . .	162
5.4	Oscillations in photon distributions . . . . .	164
5.5	Quantum phase . . . . .	171
5.6	Indirect measurements of quasidistributions . . . . .	178
5.7	Relations of quantum features of light . . . . .	180
5.8	Interaction of a single atom with light — cavity quantum electrodynamics and cavity quantum optics . . . . .	187
<b>6</b>	<b>Photon interferences and correlations</b>	<b>197</b>
6.1	Second-order interferences . . . . .	198
6.2	Fourth-order interferences — Hanbury Brown-Twiss correlations . . . . .	203

TABLE OF CONTENTS

vii

6.3	Higher-order phenomena . . . . .	208
6.4	Single photon interferences . . . . .	212
6.5	Wave-particle duality . . . . .	217
6.6	Methods involving frequency down conversion and feedbacks . . . . .	222
<b>7</b>	<b>Quantum optical and Bell's inequalities</b>	<b>238</b>
7.1	Inequalities of quantum optics and their interpretation . . . . .	238
7.2	Einstein-Podolsky-Rosen "paradox" and Bell's inequalities . . . . .	243
<b>8</b>	<b>Quantum optical experiments supporting quantum theory</b>	<b>260</b>
8.1	Single-photon interference experiments . . . . .	260
8.2	Polarization correlation experiments . . . . .	264
8.3	Experiments with feedbacks . . . . .	265
8.4	Experiments with squeezed light . . . . .	268
8.5	Experiments with sub-Poisson light . . . . .	275
8.6	Experiments with frequency down conversion . . . . .	286
<b>9</b>	<b>Conclusions</b>	<b>314</b>
