

CONTENTS

Introduction	xi
------------------------	----

General Section BASES OF METHOD

CHAPTER I. Emission of Elements in Flame	3
Characteristics of flames used	3
Excitation of spectra of elements in flames	9
Relation between emission intensity and concentration of elements in solution	16
Effect of solution composition on emission intensity of an element in a flame	20
CHAPTER II. Apparatus	30
Types of instruments and their characteristics and field of application	30
Sprayers and burners	36
Sprayers	36
Burners	42
Supply to burners and sprayers	45
Fuel gas substitutes	48
Photometers with light filters	51
Light filters	53
Photocells	57
Measurement of photocurrent	58
Construction of very simple photometer with light filters	60
Flame spectrophotometers	62
Types of instruments	62
Sprayer and burner	64
Monochromators	64
Measurement of light emission	66
Construction of attachment with photocell and ampli- fier for UM-2 monochromator	68

Construction of attachment with photomultiplier for UM-2 monochromator	71
Use of SF-4 spectrophotometer	74
Construction of electronic recording spectrophotometer	78
CHAPTER III. Some Factors Affecting the Sensitivity and	
Accuracy of the Method	82
Sensitivity of element determination and flame back- ground.	82
Effect of physical properties of solution sprayed on emission intensity of element in flame	85
Solution temperature	85
Surface tension	86
Viscosity	87
Effect of fuel gas and air or oxygen pressure on photo- current magnitude in flame photometer	88
CHAPTER IV. Photometric Measurement Procedure	
Setting up photometer for operation and measurement of photocurrent	91
Procedure for measuring test solution concentration on photometer.	94
Working region of concentrations	94
Elimination of effect of changes in gas pressure on readings	95
Measurements with calibration curve	96
Comparative method.	97
Circumscribing solutions method	98
Addition method with allowance for flame background or scattered light in determination of traces of ele- ments	100
Calculation of element content of sample analyzed . . .	103
Elimination of errors due to external radiation striking photocell	103
Choice of flame	104
Comparison with standard solutions similar in com- position to the one analyzed.	104
Determination of binary mixture components with light filters of low selectivity	105
Masking	106

Elimination of errors connected with differences in composition between analysis and standard solutions . . .	107
Separation of interfering elements	107
Dilution	108
Buffering	108
Analysis procedure	109

Specific Section

TECHNIQUES FOR DETERMINING ELEMENTS IN
VARIOUS MATERIALS

CHAPTER V. Alkali Metals	115
Lithium	115
Determination in minerals by alkali fusion	117
Determination in minerals with acid decomposition . .	118
Determination of small amounts of lithium in silicate rocks (up to 0.0005% Li_2O)	119
Determination in various materials	121
Sodium	121
Determination in waters	123
Determination in minerals with acid decomposition . .	123
Determination with decomposition by sintering	125
Determination in glasses	126
Determination in refractories and ceramic materials .	127
Determination in various reagents and preparations . .	128
Determination in soils	128
Determination in plant materials and animal tissues .	129
Determination in clinical analyses	130
Potassium	131
Determination in waters	135
Determination in minerals	135
Determination in glasses	136
Determination in refractories, ceramic materials, and Portland cement	136
Determination in fertilizers	137
Determination in soils	138
Determination in plant materials and animal tissues . .	139
Determination in clinical analyses	139
Rubidium and cesium	140
Determination with a high content	142

Determination with a low content (0.001% and above) . .	143
CHAPTER VI. Alkaline Earth Metals	146
Magnesium	146
Determination in various materials	147
Calcium	148
Determination in waters	152
Determination in minerals, glasses, and refractories .	153
Determination in plant materials and soils	155
Determination in biochemical materials	157
Determination in urine	159
Strontium	159
Determination in sea water	162
Determination in minerals and rocks	163
Determination in various materials	163
Barium	163
Determination in various materials	164
CHAPTER VII. Group III Elements	167
Boron	167
Aluminum	169
Gallium, indium, and thallium	170
Determination of gallium	170
Determination of indium	171
Determination of thallium	172
Rare earth elements	173
CHAPTER VIII. Other Metals	177
Iron	177
Determination in silicate materials	180
Determination in nonferrous metal alloys	181
Manganese	181
Determination in minerals	183
Determination in alloys	183
Determination in cement	183
Determination in plant ash	184
Chromium	185
Lead	186
Metals determinable from ultraviolet emission	186
CHAPTER IX. Special Techniques in Flame Photometry .	190
Determination of elements from molecular spectra . . .	190

CONTENTS

ix

Determination of organic phosphorus compound content	190
Determination of chlorine in chloride solutions	192
Determination of other elements	193
Determination of elements from the quenching of the flame emission of another element	194
Determination of phosphate content of minerals	194
Determination of aluminum content of its salt solu- tions and alloys	196
Determination of elements from the amount of cation undergoing a precipitation reaction	197
Determination of halogens	198
Determination of sulfates in serum	199
APPENDIXES	201
I. Wavelengths of strongest spectral lines and peaks of molecular bands of elements excited in a flame . . .	201
II. Recommended wavelengths of spectral lines and maxima of molecular bands for the determination of elements by means of a spectrophotometer with a glass optical system with the use of an air-acety- lene flame	203
BIBLIOGRAPHY	205
