

# CONTENTS

<i>Preface</i>	ix
<i>Acknowledgments</i>	xi

## **Chapter 1 INTRODUCTION**

1. Introduction	1
2. Optical Nonlinearities—Physical Origins	4
3. Mathematical Foundations	5
4. Properties of the Nonlinear Susceptibilities	15
5. Specific Nonlinear Effects	19
6. Calculation of Nonlinear Susceptibilities	21
References	28

## **Chapter 2 THIRD-HARMONIC GENERATION AND THIRD-ORDER FREQUENCY MIXING**

1. Introduction	31
2. Four-Wave Frequency Mixing	32
3. Techniques for Phase Optimization	49
4. Nonlinear Susceptibilities	59
5. Resonant Enhancement	64
6. Effects of Finite Laser Bandwidth	67
7. Conversion Efficiency	87
8. Experimental Results	88
References	143

## **Chapter 3 HIGHER-ORDER PROCESSES**

1. Introduction	149
2. Higher-Order Harmonic Generation	150

3. Relative Importance of Harmonic Processes of Different Order	183
4. Experimental and Theoretical Results	185
References	214
<b>Chapter 4</b> LIMITATIONS ON CONVERSION EFFICIENCY DUE TO COMPETING EFFECTS	
1. Introduction	217
2. Limiting Mechanisms—General Properties	218
3. Properties of Competing Nonlinear Processes	222
4. The Effects of Competing Processes on Conversion Efficiency	232
5. Experimental Results	311
References	324
<b>Chapter 5</b> SELF-ACTION EFFECTS AND DEGENERATE FOUR-WAVE MIXING	
1. Introduction	327
2. Nonlinear Polarizations	327
3. Materials	329
4. Self-Action Effects	331
5. Degenerate Four-Wave Mixing	359
References	414
<b>Chapter 6</b> APPLICATIONS	
1. Introduction	419
2. Materials Studies	420
3. Infrared Up-Conversion	433
4. Optical Bistability and Related Effects	442
References	452
INDEX	457
