

Contents

1	SURVEY OF ELECTRO-OPTICAL IMAGING	1
1.0	Introduction	1
1.1	Radiation Characteristics	3
1.2	Electro-Optical Imaging Techniques	9
1.3	Low Light Level Imaging History	14
2	NIGHT ILLUMINATION	20
2.0	Introduction	20
2.1	Moonlight	26
2.2	Airglow	30
2.3	Starlight	33
2.4	Tropospheric Thermal Radiation	36
2.5	Atmospheric Transmission of Radiation	38
2.6	Reflectivity at Night	39
3	IMAGE-INTENSIFIER CHARACTERISTICS	44
3.0	Introduction	44
3.1	Electrostatically Focused Image Intensifiers	47
3.2	Magnetically Focused Image Intensifiers	49
3.3	Proximity Image Intensifiers	50
3.4	Multiple-Stage Intensifiers	51
3.5	High-Speed Image Converter Photography	57
3.6	Discrete Channel Electron Multiplier Intensifiers	66
3.7	Solid-State Image Intensifiers	70
3.8	Lallemand-Type Imaging Tube	73
4	LOW LIGHT LEVEL LENS SYSTEMS	77
4.0	Introduction	77
4.1	Influence of Image Characteristics on Lens Parameters	78
4.2	Fast Lens Design	85
4.3	Objective Considerations	99
4.4	Gyrostabilized Lens Systems	100

5	IMAGE-INTENSIFIER ELECTRONOGRAPHY	102
5.0	Introduction	102
5.1	Experimental Systems	103
5.2	Passive Night-Camera Analysis	108
5.3	Camera Design Considerations	116
6	LOW LIGHT LEVEL TELEVISION	118
6.0	Introduction	118
6.1	Image Orthicon Characteristics	120
6.2	Image-Intensifier Orthicon	134
6.3	Low Light Level Vidicons	136
6.4	Noise in Television	142
6.5	Picture Lag in Image Orthicons and Vidicons	143
6.6	Infrared Television	145
7	PHOTOGRAPHIC RECORDING OF PHOSPHOR DISPLAYS	148
7.0	Introduction	148
7.1	Phosphor Display Characteristics	150
7.2	Practical Measurement and Computation of Phosphor Face- plate Luminescence	156
7.3	Film Characteristics	158
7.4	Phosphor-Film Considerations	161
7.5	Optical Image Transmission	162
7.6	Cathode Ray Tube Characteristics	168
7.7	Low Light Level Television Recording	169
8	UNIQUE TELEVISION RECORDING TECHNIQUES	172
8.0	Introduction	172
8.1	Light Beam Recording	173
8.2	Electron Beam Recording	186
8.3	Recording Characteristic Comparison	198
9	IMAGE RECORDING MATERIALS	200
9.0	Introduction	200
9.1	Recording Material Evaluation	205
9.2	Electrophotographic Recording	211
9.3	Dielectric Recording	218
9.4	Metallic Oxide Reduction Recording	221
9.5	Dichromated-Colloid Layer Recording	222
9.6	Free-Radical Recording	222

9.7	Electrolytic Recording	223
9.8	Diazo Recording	224
9.9	Photochromism	227
9.10	Photochemical Recording	228
9.11	Photopolymerization Recording	228
10	LOW LIGHT LEVEL INSTRUMENTS AND THEIR APPLICATIONS	231
10.0	Introduction	231
10.1	Low Light Level Astronomy	232
10.2	Image Tubes in High-Speed Low Light Level Photography	239
10.3	X-ray Imaging Systems	242
10.4	Microscopy	247
10.5	Structural Analysis	249
10.6	Marine Uses for Low Light Level Television	249
10.7	Future Potential	251
11	PHYSICS OF LOW LIGHT LEVEL ELECTRO-OPTICAL COMPONENTS	260
11.0	Introduction	260
11.1	Photocathodes	261
11.2	Electron Lens Characteristics	267
11.3	Television Electron Beam Scanning	275
11.4	Tube Background Emission	276
11.5	Secondary Emission	280
11.6	Intensifier Theory	281
11.7	Environmental Effects	284
12	COMPARISON OF IMAGING SENSORS	287
12.0	Introduction	287
12.1	Eye Performance	290
12.2	The Photographic Detector	296
12.3	Image Intensifier	302
12.4	Low Light Level Television	305
12.5	System Comparisons	308
12.6	Comparison Summary	317
13	MATHEMATICAL ANALYSIS OF ELECTRONOGRAPHY	321
13.0	Introduction	321
13.1	Modulation Transfer Functions	322
13.2	Descriptive Model	324

13.3	Edge-Gradient Techniques	336
13.4	Experimental Results	337
13.5	<i>MTF</i> Probability Distribution	341
13.6	Parametric Analysis	342
14	LOW LIGHT LEVEL IMAGE EVALUATION	345
14.0	Introduction	345
14.1	General Considerations	346
14.2	Target Description	347
14.3	Theoretical Detection Range	349
14.4	Field of View Requirements	353
14.5	Image Detection and Recognition	354
14.6	Multiple Focal Length Instruments	357
15	MILITARY UTILITY OF PASSIVE NIGHT IMAGING	359
15.0	Introduction	359
15.1	Current Potential of Night Fighting	361
15.2	Night Imaging Problems	364
15.3	Human Factors Design	365
15.4	Summary	366
	BIBLIOGRAPHY	367
	INDEX	389
